Re: BR1 manual

The BR1 is a water and dust proof, Bluetooth audio receiver. It's been designed to provide a quick and simple way to stream music from a Bluetooth A2DP-enabled device, directly to your audio system. The pre-amp output from the BR1 is capable of driving outboard amplifiers directly, and the built-in 12 volt output will trigger your amplifier to turn on once playback begins. The BR1 can be installed out of sight, as your device will be the sole controller to enjoy music playback, track and volume control.

Bluetooth Pairing and Connection:

1. Activate the Bluetooth radio function on your device, if not done so already. This can typically be found in the Settings menu of your device.
2. Ensure power is applied to the BR1, which can be confirmed by the flashing blue LED. This indicates that the BR1 is in "pairing" mode.
3. Initiate the "search" function within the Bluetooth settings of your device. The query will display the BR1 as an available device.
4. Select the BR1 from this list and choose the "connect" option. You are now able to begin music streaming through the BR1.

Once a pairing is established, the BR1 is held in memory so your device can connect to it as you wish. The BR1 will automatically reconnect with the last known device once it's found to be in range.

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

Caution: Any changes or modifications to this device not explicitly approved by manufacturer could void your authority to operate this equipment.

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

The device has been evaluated to meet general RF exposure requirement. The device can be used in portable exposure condition without restriction.
