| [11] Rolling axis | [22] SD reading port |
| | [23] HDMI interface |

II How to use Summon

1 Install battery

Remove the hand shank and insert one 22650 battery into it.

2 Power on / off

The function button can control power on or power off.

Power on:

Long press the function button until the green light up, then release it to turn on the gimbal.

Power off:

Long press the function button until the red light always on, then release it to turn off the gimbal.

! If the battery power is too low, the screen shall turn off automatically, **please long press the function button for 3 seconds** so as to make sure the unit completely powers off. Then you can recharge or replace the battery.

1. Function introduction of buttons and ports

● Photo / Video switchover button

Single tap this button to switch below Photo mode and Video mode.

Long press this button to open WiFi function, and long press again to turn off WiFi function.

The default is Video mode.

* Class10 high-speed micro SD card is recommended

Micro SD card *
(Equipped by users)

● SD reading port

Connect to a computer with USB data cable so as to read the video and picture files in a SD card.

USB port

● USB port

Connect with USB data cable by this port to upgrade firmware or charge the battery.

Please refer to "Firmware upgrade" for the operation of firmware upgrade.

Please refer to "Charging mode" for the charging mode.

● Joystick

Control the orientation of camera lens

Joystick	Camera lens
Up	Down
Down	Up
Left	Left
Right	Right

Control camera menu *

Joystick	Camera menu
Up	Upward selection
Down	Downward selection
Left	Return to the previous menu / Exit
Right	Access the next menu / Confirm

* Triple tap function button to access camera menu, the joystick can set the camera menu at this moment.

● Function button

Switch working mode or access camera menu.

Please refer to "Introduction of camera menu" and "Introduction of working mode"

● Shutter

Single tap this button to start or stop photographing or recording.

In Photo mode, single tap this button to take a picture.

In Video mode, single tap this button to start recording, and press again to stop recording.

Double tap this button to turn on the fill flash, and double tap again to turn off the fill flash.

The video files are named as MOV_XXXXX.mov, for example, "MOV_00001.mov"

The picture files are named as IMG_XXXXX.jpgv, for example, "IMG_00001.jpg"

2. Camera menu introduction

Triple tap function button to access camera menu

● Menu introduction

 Only display in Video mode
 Only display in Photo mode

Media Playback	VIDEO	Play back recorded videos		JPG	Check the pictures	
	Joystick	VIDEO		JPG		
	Up	Check the previous video		Check the previous picture		
	Down	Check the next video		Check the next picture		
	To the left	Return to menu		Return to menu		
	To the right	Play videos		Check picture information		

Under the "VIDEO" or "JPG" option, click the "Photo / Video switchover button" enter the delete menu, you can choose to delete a single file or delete all files.

Movie Size

Only display in Video mode. You can choose from below video sizes:

1080P (60fps) / 1080P (30fps) / 720P (120fps) / 720P (60fps) /
VGA (240fps) / 4K (25fps) / 4K (15fps) / 2.7K (30fps) /
1440P (30fps)
Factory default setting is 1080P (60fps)

Tips: non-high-speed micro SD card is not available for 4K format shooting.

Resolution

Only display in Photo mode. You can choose from below :

16M (4508*3456) / 12M (4000*3000) / 8M (3264*2448) /
5M (2592*1944)
Factory default setting is 16M (4508*3456)

Field Of View You can choose from Wide, Medium and Narrow grades.
The factory default setting is Wide.

Distortion Correct Repair the distortion caused by camera lens to avoid the barrel shape distortion of pictures. Factory default setting is "On" .

Slow Motion  Open the slow motion function. Only display in Video mode except 4K video sizes. Factory default setting is "Off" .

White Balance  Tap to adjust the white balance. Only display in Video mode. Can be set to be Auto / Daylight / Cloudy / Fluor H / Tungsten, the boot-up default is "Auto" .

Scheduled picture  Only display in Photo mode.
Factory default setting is "Off" . You can choose from below:

- 2S

Take a picture after 2 seconds
- 10S

Take a picture after 10 seconds
- Double

Take the first picture after 10 seconds and take the second picture after 2 seconds
- Off

Don't use this function

- Photo Burst**  Only display in Photo mode. 3 / 5 / 10 pictures are settable for continuous shooting, factory default setting is Off.
Press **Shutter** button for continuous shooting after setting.
- Timelapse** Open the timelapse function and set the internal time for shooting two adjacent photos. You can choose from 3 sec / 5 sec / 10 sec / 30 sec / 1 min / Off.
Factory default setting is Off.

Timelapse Duration Set the shooting time of time-lapse photography.

Level Speed Open the panning axis rotation function and set the panning axis rotation speed for time-lapse photography.
The settable numerical range is $-20 \leftarrow 0 \rightarrow +20$ (“+” stands for clockwise rotation, “-” stands for anticlockwise rotation), the bigger the number the faster the rotation speed, the maximum rotation speed is $360^{\circ} / 6 \text{ min}$, and the minimum is $360^{\circ} / 120 \text{ min}$.
If the number increases by 1, the time needs for rotating 360° shall decrease by 6 minutes;
if the number decreases by 1, the time needs for rotating 360° shall increase by 6 minutes.
The time needs for rotating 360° between two numbers is as following table (“min” stands for minutes)
There is no rotation when the number is set as 0.

Number	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20
Time	120 min	114 min	108 min	102 min	96 min	90 min	84 min	78 min	72 min	66 min	60 min	54 min	48 min	42 min	36 min	30 min	24 min	18 min	12 min	6 min

Vertical Speed Turn on the tilting axis rotation function to set the tilting axis rotation speed for time-lapse photography. Please refer to “Level Speed setting” .

Invert Mode Invert the screen display after opening.
Can be used for inversion shooting. Factory default setting is “Off” .

Date Stamp The shooting date and time shall be displayed on the picture after this function is opened. Settable options: Off / Date / Date & Time. Factory default setting is Off.

Date & Time Can set the current date, time and format. Turn the joystick to the right to successively select the date and time format desired to be modified, turn the joystick up to increase the numerical value while turn it down to decrease the numerical value. After setting all items, turn the joystick to the right to save the settings and return to the previous menu.

Language Set the menu to be in English / Simplified Chinese / Traditional Chinese / German / French / Spanish / Portuguese. The factory default setting is English.

System	Factory Reset	Restore to the factory settings

	Card Info	Check the capacity and free space of SD card

WiFi-Password Set WiFi password.

Format Format SD card

3. Introduction of photographing and shooting

Photographing

Switch to Photo mode by "Photo / Video switchover button".
Single tap "**Shutter**" button to photograph.

Special modes: Photo Burst / Scheduled picture

Shooting

Switch to Video mode by "Photo / Video switchover button".
Single tap "**Shutter**" button to start recording and press this button again to stop recording.

Special mode: Slow Motion / Panorama shooting

Timelapse (Please refer to "Actual Operations" for detailed operations)

Automatically take a picture in the set time interval, panning axis moves by the set horizontal speed (or tilting axis moves by the set vertical speed), and automatically compose a video after shooting.

Panorama Shooting

In video mode, triple tap the "Shutter" button to start panorama shooting, heading axis will automatically rotate shooting. Shooting range: 360 ° Recording Time: 8s

4. Introduction of operating mode

Working mode

Panning mode

The camera is allowed to pan left or right.
Vertical tilts or rolls are disabled.

Panning and Tilting mode

The camera is allowed to pan left or right
and tilt up and down. Rolls are disabled.

Lock mode

The camera stays in its current orientation.
All panning, tilting and rolls are disabled.

Other functions

Reset

Reset the tilting axis to initial
orientation and initial mode.

Standby

In standby mode, keep in power-up
state, the motor stops working, the
indicator light flashes for three times,
and single tap again to wake it up.

Operation instructions of function button

Operation	Function	Explanation
Single tap	Panning Mode / Lock Mode	Single tap to switch between panning mode and lock mode
Double tap	Panning and Tilting Mode	Under panning and tilting mode, single tap to switch to lock mode
Triple tap	Access camera menu	Control camera menu by the joystick (Please refer to "Joystick")
Quadruple tap	Reset	Reset the tilting axis to initial orientation and initial mode
Long press for 1 second	Standby	Single tap again to wake it up, or triple tap to initialize (Please refer to "Initialization")

5. LED indicator instructions

Color	Flashes	Mode / Status
Blue	Single	Panning mode
Blue	Double	Panning and Tilting mode
Blue	Triple	Standby
Blue	Always on	Lock mode / Initializing
Blue	Quickly	Initialization failure / Malfunction

6. Inversion shooting

Turn the hand shank to the upward side of camera to realize the inversion for shooting in the scenes with low angle.

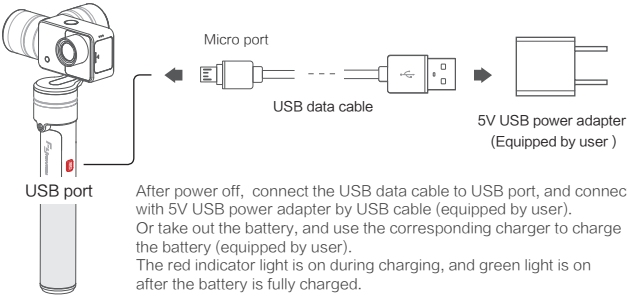

7. Firmware upgrade

Upgrade steps

- (1) Please visit the official website www.feiyu-tech.com to download the relevant programs for upgrading, including USB drive program, firmware upgrade software and product firmware, and install the relevant software, decompress the firmware files for standby application.
- (2) Connect the USB cable with micro port as the above picture.
- (3) Please upgrade the relevant firmware according to the operation instructions of firmware upgrade software.

8. Charging

9. Initialization

Initialization is required in these cases

- (1) There is small angular deviation between tilting angle and horizontal line after boot-up.
- (2) There is small angular deviation between rolling angle and horizontal line.
- (3) Under lock mode, panning angle drifts.

Initialization steps:

- (1) In boot-up state, long press for 0.5 second to make the motor stop working, the indicator light shall flash for three times.
- (2) Triple tap function button, place it on a still surface after the indicator light is on, and keep it in a static state as shown in the right picture:
- (3) Initialization succeeds if the indicator light restores to flashing for three times.

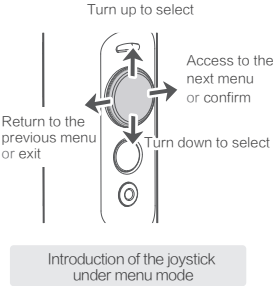

When the initialization failed, the LED indicator will flash quickly, repeat step (2) & (3) to reinitialize.

10. Operating example

Take time-lapse photography as an example:

- (1) Install the battery, long press the function button for 0.5 second to power on.
- (2) Triple tap function button to access the menu.

- (3) To select “Timelapse”, turn the joystick to the right to access this interface, you can set the interval time of continuous pictures taken by time-lapse photography. For example, you can set it as 5 seconds. Turn the joystick to the right to save, and return to the previous menu.

▲ After enter “Timelapse”

- (4) To select “Timelapse Duration”, turn the joystick to the right to access this interface, you can select from unlimited / 5 / 10 / 15 / 20 / 30 / 60 minutes. The default is “unlimited”, i.e. no limit to the shooting time. Turn the joystick to the right to save, and return to the previous menu.

▲ After enter “Timelapse Duration”

- (5) To select “Level Speed”, turn the joystick to the right to access this interface, set the speed of panning movement, take “+15” as an example (“+” is for clockwise rotation, “-” is for anticlockwise rotation). Turn the joystick to the right to save, and return to the previous menu.

▲ After enter “Level Speed”

- (6) Single tap the **Shutter** after setting, panning axis shall rotate according to the set speed and take a picture for every 5 seconds. The pictures shall automatically generate videos after shooting.

Single tap the **Shutter** button to end the shooting in advance, the pictures shall automatically generate videos after shooting and can be previewed in “Media Playback”

III Product Parameters

Tilting angle range	310°		Maximum control speed	± 120° /s
Rolling angle range	310°		Battery model	22650
Panning angle range	360°		Working voltage	3.7V ~ 4.2V
Graph sensor	16 mega pixels		Lens field angle	95°
Lens specification	1 / 2.3"		Aperture Size	f 2.8

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

NOTE: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.
