FCC STATEMENT

FEDERAL COMMUNICATION COMMISSION INTERFERENCE STATEMENT

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

FCC Caution: To assure continued compliance, any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate this equipment. (Example - use only shielded interface cables when connecting to computer or peripheral devices).

User Manual for MF0200 Gateway Box

FCC Radiation Exposure Statement

This transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.

CE Mark Warning

This equipment is compliant with Class A of CISPR 32. In a residential environment this equipment may cause radio interference.

User Manual for MF0200 Gateway Box

BATTERY CAUTION: Danger of explosion if battery is incorrectly replaced. Replace only with same or equivalent type recommended by the manufacturer. Do not discard used batteries in to regular trash. These batteries need to be recycled according to the manufacturer's instructions.

User Manual for MF0200 Gateway Box

1. INTRODUCTION TO MF0200 CSP GATEWAY

The MF0200 CSP gateway hardware is a cloud-connected high-performance computer which is a component of Mentor Graphics' Cloud Services Platform (CSP). This device is fully managed from a flexible and extendable cloud-hosted backend. The MF0200 serves as an interface between any cloud-hosted service and on premise devices connected to the gateway via wired and/or wireless interfaces such as TV/Display connected via HDMI cable to the gateway, USB devices (e.g. mouse, keyboard, camera, etc.), network devices (e.g. printer, camera, etc.), and Wi-Fi connected devices (e.g. Wi-Fi sensors, Wi-Fi actuators).

1.1. CSP GATEWAY SPECIFICATION

Following table shows specifications of the CSP gateway device.

CPU	NXP i.MX6 quad-core 1.0GHz
Heatsink	Yes
System RAM	2GB DDR3
eMMC	16GB
WiFi	802.11b/g/n 2.4G single-band
Bluetooth	Yes
HDMI	One (1) full-size HDMI
RTC	Yes
UART (internal)	One (1) 6pin wire-to-board connector
	Pin1 – Red – UART4_TX
	Pin2 – DCDC_5V
	Pin3-GND
	Pin4 – UART5_TX
	Pin5-UART5_RX
	Pin6 – UART4_RX
NGFF Slot	One (1) M.2 (NGFF socket 2) slot for storage SSD
USB (external)	Four (4) Host standard-a receptacle
USB (internal)	One (1) 1*OTG 5 pin wire-to-board connector
SD Card Slot	One (1) full size SD card slot
Ethernet LAN	Two (2) Gigabit LAN for RJ45
EEPROM	2Kbit EEPROM
GPIO	One (1) 10pins wire-to-board connector
Power / DC Jack	12V / 2A (24W) wall-mount type of adaptor US-type plug
LEDs	Two (2) LAN indicators One (1) Cloud connection indicator One (1) Peripheral connection indicator
Buttons	Reset (RR)
	Factory reset (FR)
Antenna (external)	One (1) WiFi/BT connector is SMB type
Board Dimensions	129.0 (L) * 89.6 (W) mm
RoHS	Yes

1.1.1. FRONT VIEW OF CSP GATEWAY DEVICE

1. Wi-Fi Antenna.
2. LED: Ethernet 0 interface activity indicator
3. LED: Ethernet 1 interface activity indicator
4. LED: Cloud LED
5. LED: Peripherals LED
6. Wi-Fi Indicator
7. Bluetooth Indicator
8. HDMI out-port
9. USB Ports
10. SD card slot

1.1.2. BACK VIEW OF CSP GATEWAY DEVICE

1. RR: Reset
2. FR: Factory Reset
3. USB ports
4. Ethernet 0 and Ethernet 1 port
5. Power Supply

1.1.3. CSP GATEWAY LED INDICATOR CHART

Following table shows how the LED lights indicate the operations being performed on the CSP gateway device.

no.	CSP Box State	GREEN Peripherals LED	RED Peripherals LED	GREEN Cloud LED	RED Cloud LED
1	Power On	ON	OFF	ON	OFF
2	Kernel Booting	Heartbeat	OFF	OFF	OFF
3	Kernel Booted Successfully	ON	OFF	OFF	OFF
4	CSP System Starting	ON	OFF	Heartbeat	OFF
5	CSP System Signaling Connecting	ON	OFF	Timer	OFF
6	CSP System Signaling Connected	ON	OFF	ON	OFF
7	CSP System applying patch	ON	OFF	Heartbeat	Heartbeat
8	CSP System updating firmware	ON	ON	ON	ON
9	CSP System No Configuration Object	ON	OFF	OFF	ON
10	CSP System Fatal Error	ON	OFF	OFF	Timer
11	CSP Box Rebooting	Heartbeat	OFF	Heartbeat	OFF
12	CSP System Error updating	OFF	Heartbeat	OFF	Heartbeat

User Manual for MF0200 Gateway Box

	firmware				
13	CSP System Error applying patch	ON	OFF	OFF	Heartbeat
14	CSP System firmware update done	Heartbeat	Heartbeat	Heartbeat	Heartbeat

2. GETTING STARTED

To setup the gateway, you require:

2.1. CSP MOBILE PORTAL APPLICATION

The basic system requirements to set up the gateway device are:

1. Android device which operates on android version 5.1 or above.
2. CSP Admin Console App installed on the device. If the user does not have the app; it can be downloaded from the [CSP Admin Portal](#).
 - a. After downloading and installing the application the user needs to log in using the credentials through which they access the CSP web portal.
 - b. If the user does not have the credentials for CSP Web portal then he/she can request for credentials through CSP web Portal as mention in [Section no. 1.2 “Apply for Account”](#) in the document “CSP Admin Portal R7”.

2.2. CONNECT THE GATEWAY WITH NETWORK

Gateway device can be connected through both wireless and wired networks.

2.2.1. WIRED

1. DHCP.
2. Static.

2.2.3. WIRELESS

1. DHCP.

3. INITIAL CONFIGURATION AND CONNECTION

3.1. POWER UP

1. Attach the provided antenna to the gateway: Screw on antenna to the provided socket on the gateway. The antenna can be rotated and angled so it can be aligned in any installation position.
2. In case of wired connection: Attach the LAN wire to the gateway device
3. Connect the provided power adaptor to the gateway
4. Wait for about one minute to allow the gateway to fully boot itself
5. Login to the CSP portal using your mobile device (smartphone) – see chapter 3.2

3.2. LOGIN

Launch the CSP mobile setup application on your mobile device and login into the CSP mobile portal by providing a valid username and password.

Figure 1: Login

Enter Credentials provided to you by the CSP administrator to login. Following screen would appear after you launch the CSP mobile setup application

User Manual for MF0200 Gateway Box

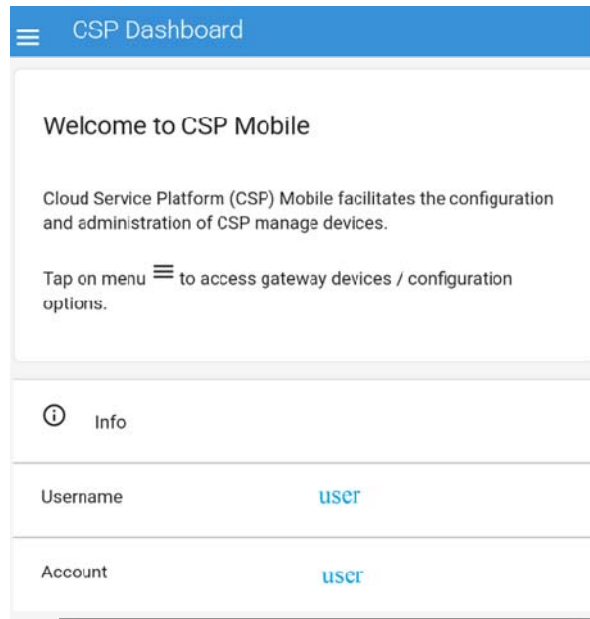

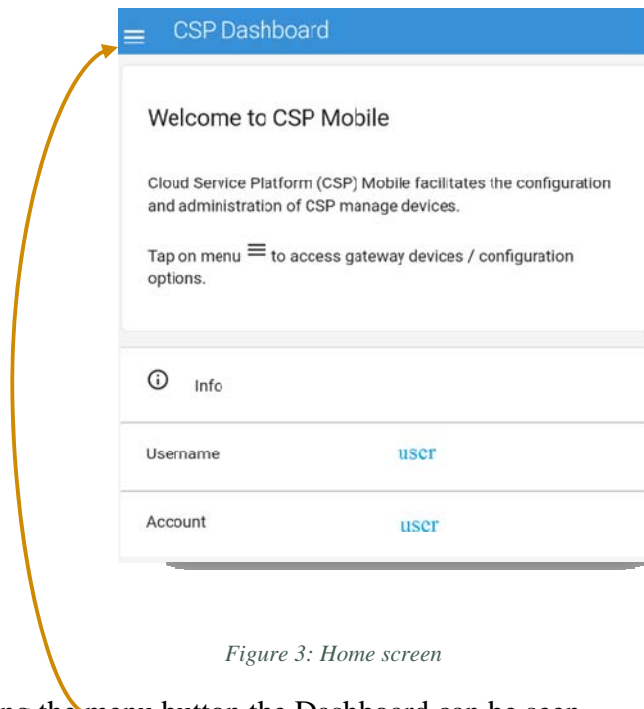

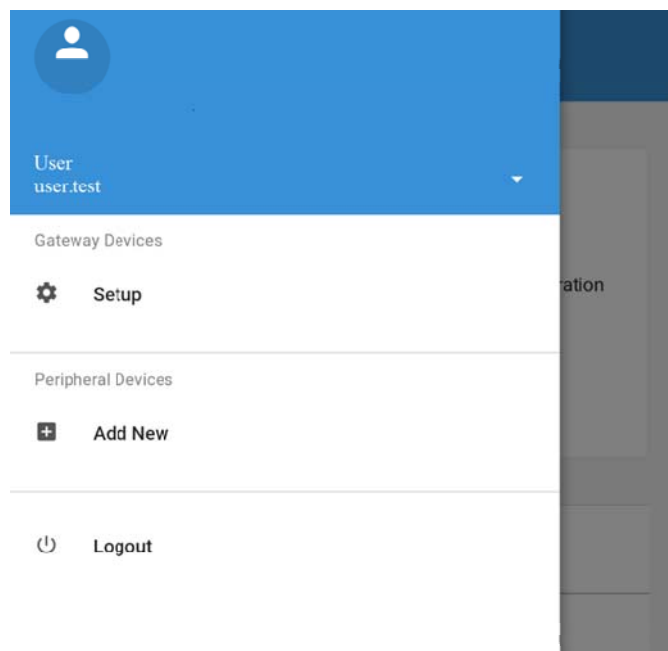

Figure 2: Home screen

3.3. PAIRING & CONNECTING

To pair the gateway device it is needed to go to the dashboard and setup the device.

After clicking the menu button the Dashboard can be seen.

User Manual for MF0200 Gateway Box

Click on setup to pair and configure the box.

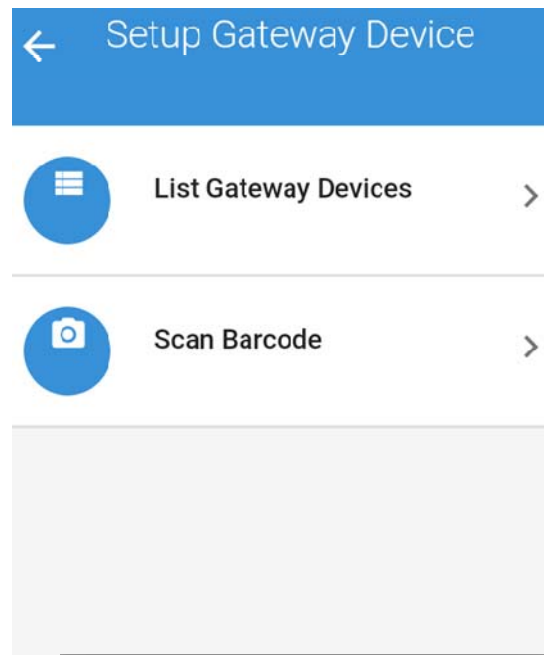

Figure 5: Two ways of setting up a gateway device

The gateway device can be selected in two ways – by selecting the gateway from a drop-down list or by scanning the barcode located on the back of the gateway. The list provides the IDs of gateway devices available, user can search the device manually. Alternatively, the user can scan the “Gateway Barcode” to choose the device directly.

Prerequisite:

The device has already been provisioned on CSP backend

3.3.1. LIST GATEWAY DEVICES

List of all the gateway devices provisioned with particular account will be displayed.

Figure 6: List of gateway devices

After choosing the gateway, application requests to turn on the Bluetooth on the mobile device (smartphone) if it already has not been enabled. After selecting the gateway it following screen would appear to pair the mobile device with CSP gateway device.

User Manual for MF0200 Gateway Box

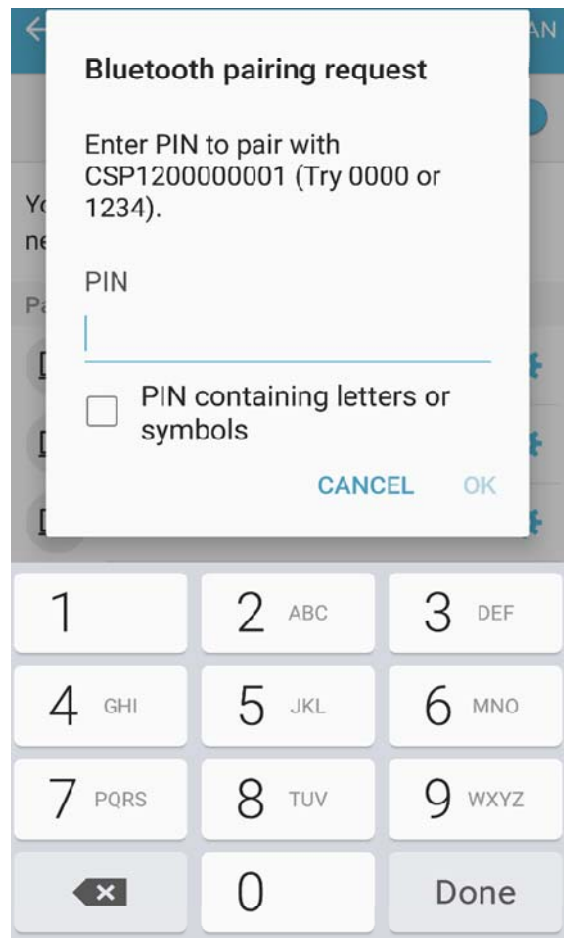

Figure 7: Enter pin for pairing

Enter the pin of CSP gateway device provided to you by the CSP administrator.

3.3.1.1. Gateway Device Info

After authentication the following screen would appear with information regarding the selected CSP gateway device. This shows the current settings of the CSP Gateway device.

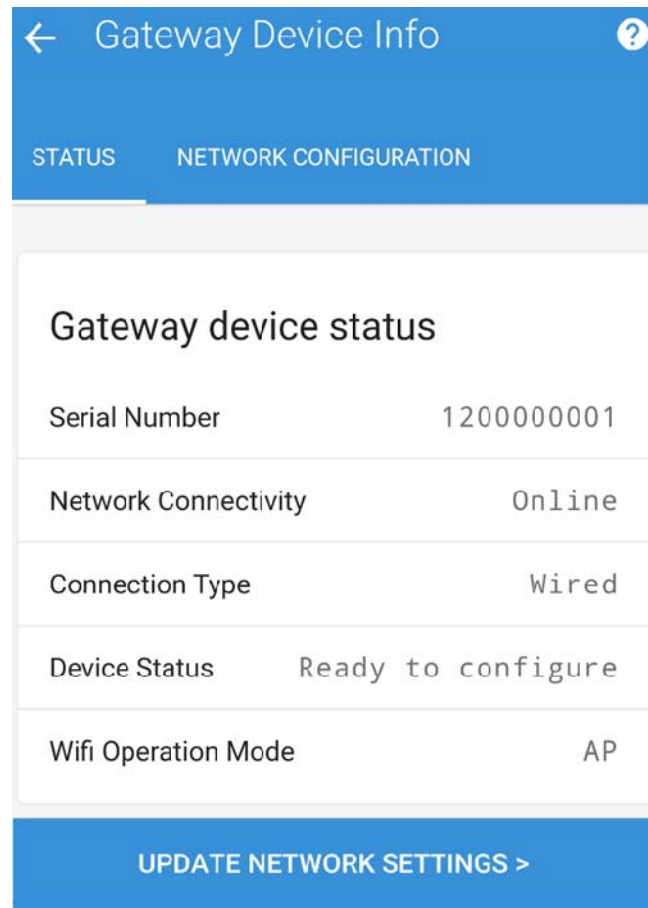

Figure 8: Gateway Device Info- *status*

To see the network configurations of the CSP gateway device select “Network Configurations” tab.

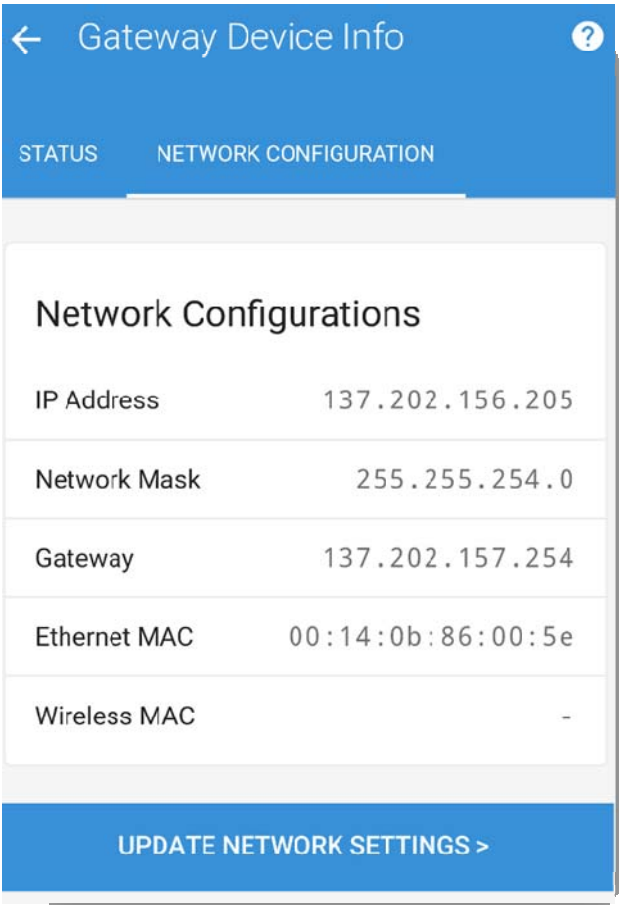

Figure 9: Gateway Device Info- *Network Configuration*

3.3.1.2. Update Network Settings

Click on Update Network Settings to change the network settings.

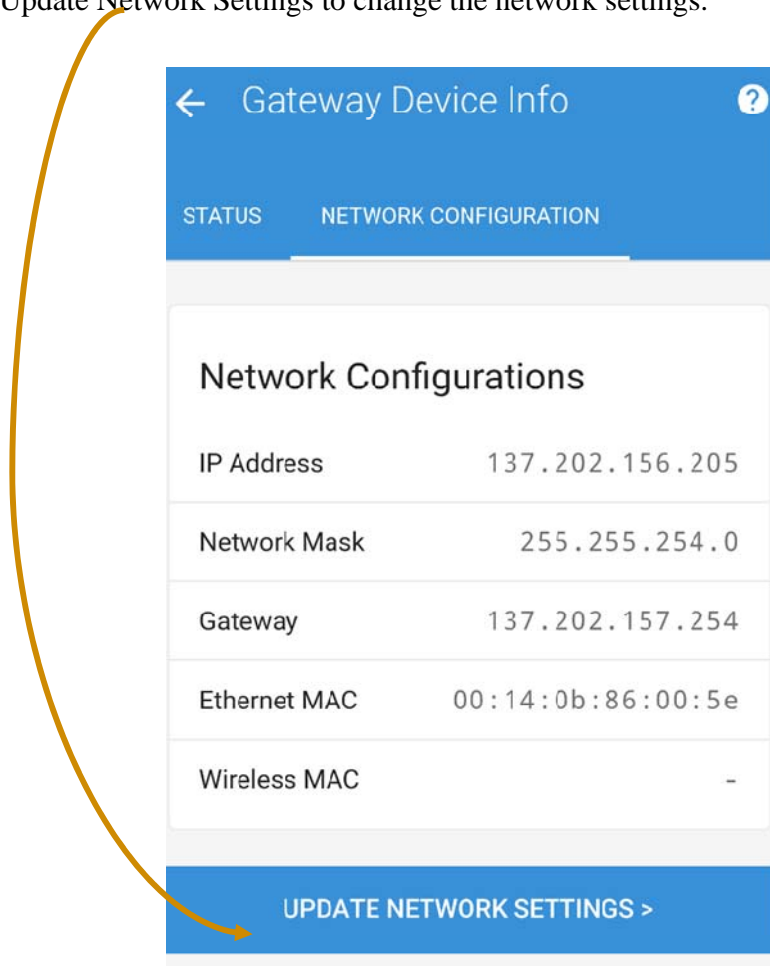

Figure 10: Update Network Settings.

After selecting “Update Network Settings” new screen would appear that allows the user to choose the networking interface. In this case it is “Ethernet”.

3.3.1.3. Ethernet Configuration:

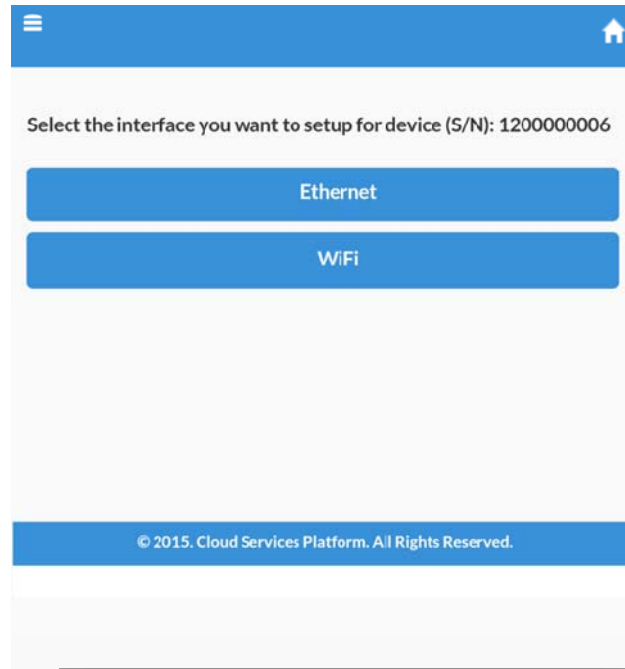

Figure 11: Choose the network interface

After choosing Ethernet click “NEXT”.

User Manual for MF0200 Gateway Box

3.3.1.3.1. Ethernet Setup - DHCP

Ethernet can be setup to either DHCP or Static configuration. Click on save button to select DHCP.

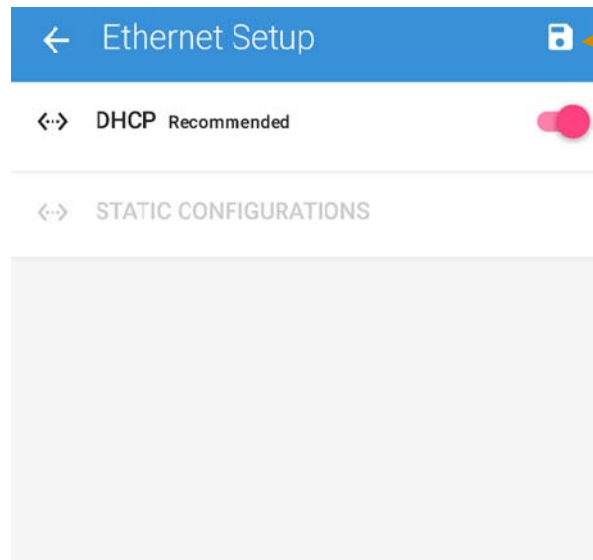

Figure 12: Ethernet Setup

User Manual for MF0200 Gateway Box

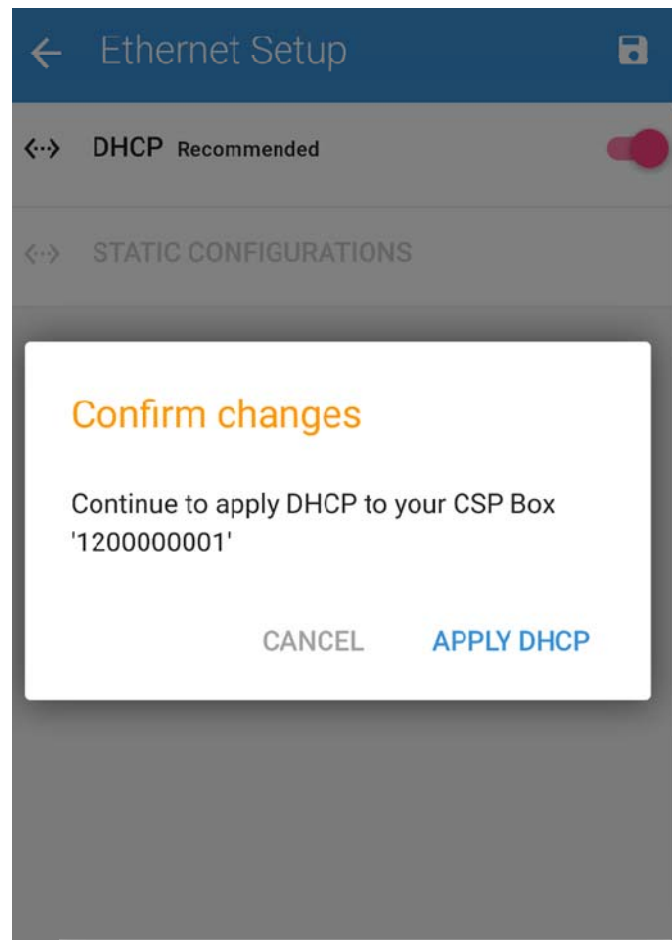

Figure 13: Confirm Changes to Setting.

Select “Apply DHCP” to confirm the selection.

After DHCP settings; following window appears to confirm that configuration is sent.

User Manual for MF0200 Gateway Box

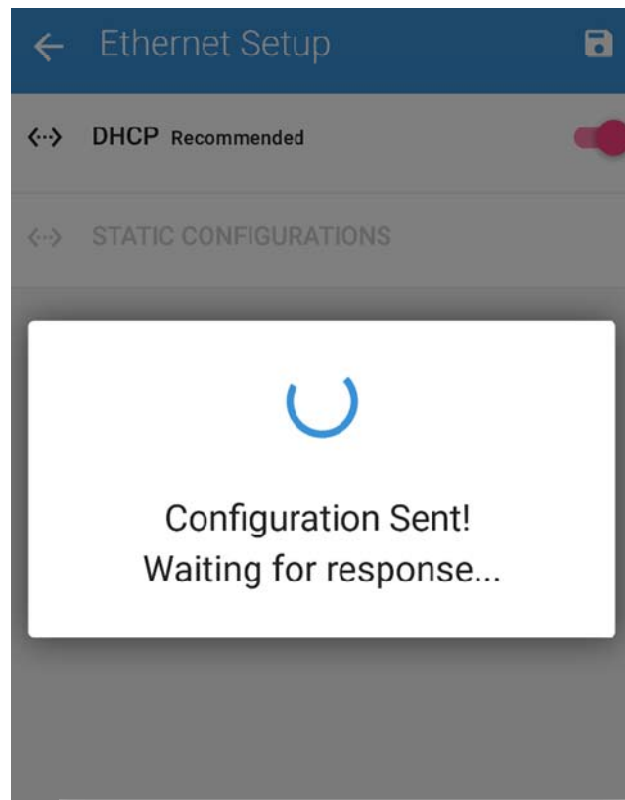

Figure 14: Configuration sent

After configurations are sent the CSP gateway device is automatically rebooted.

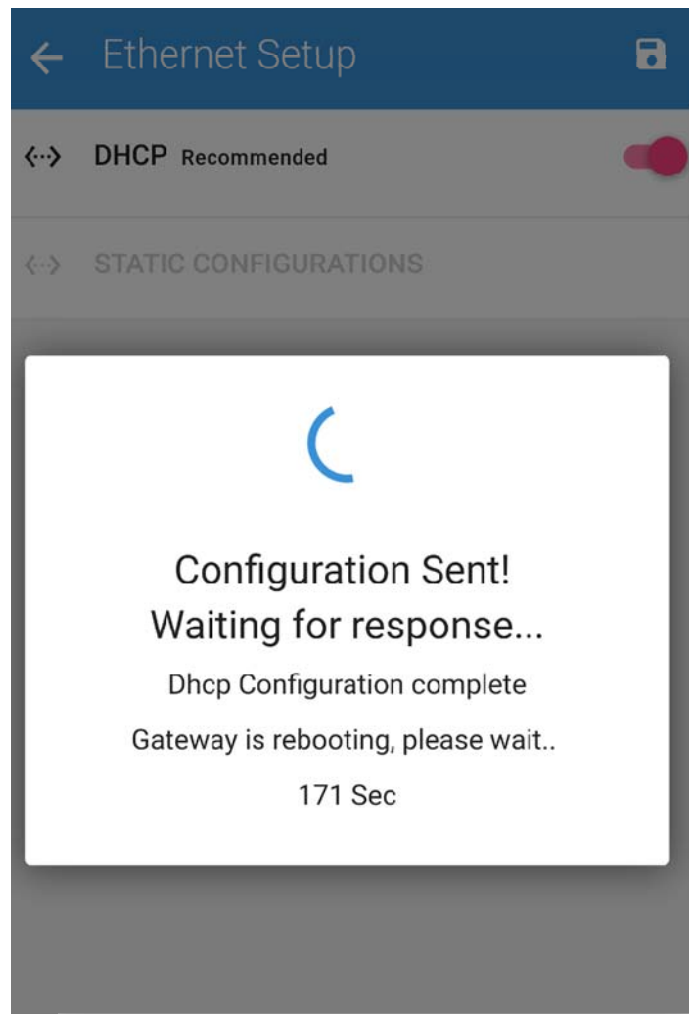

Figure 15: Rebooting the device.

Updated configurations are displayed after reboot of CSP gateway device.

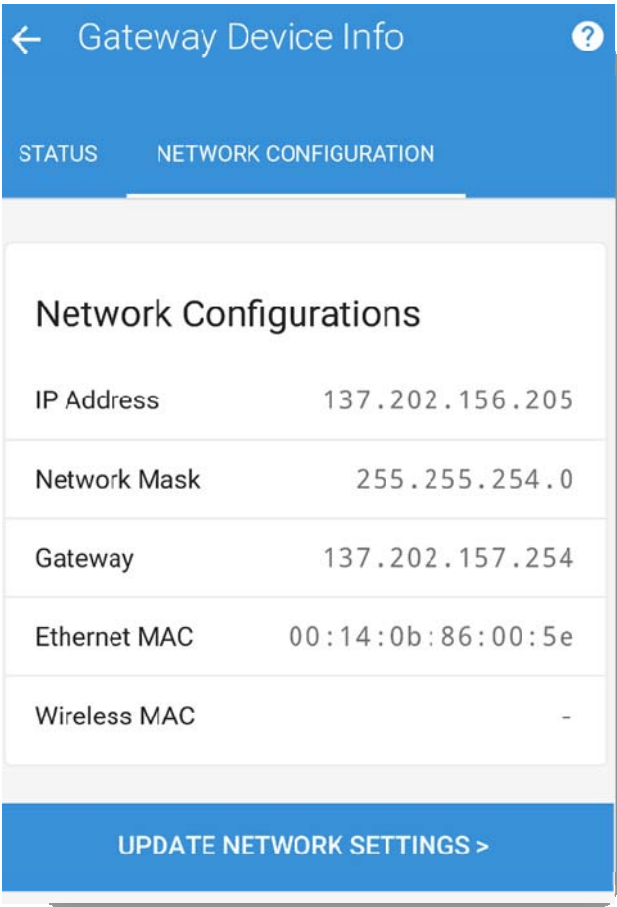

Figure 16: Updated network configuration

User Manual for MF0200 Gateway Box

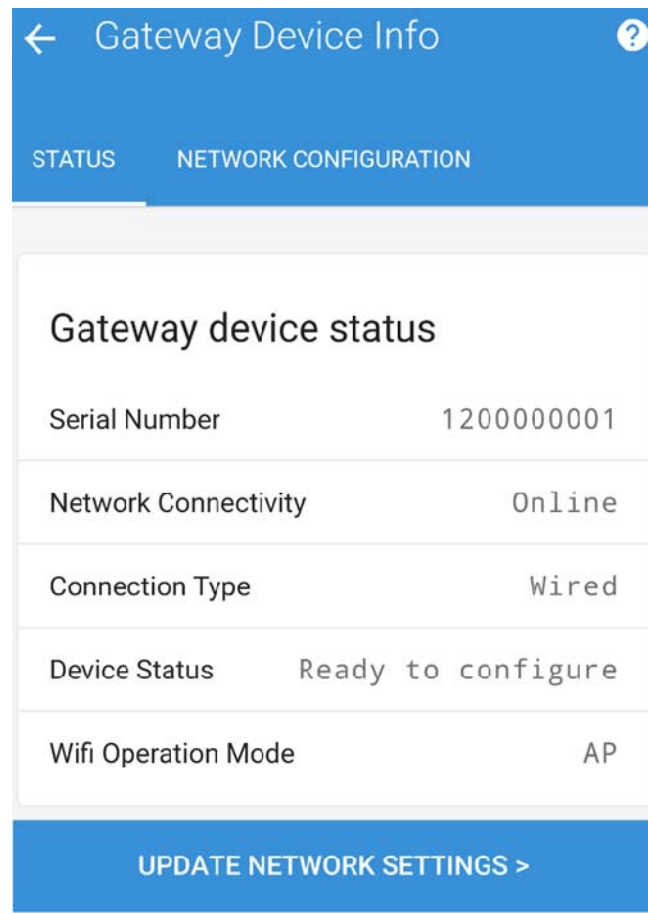

Figure 17: Updated Status

3.3.1.3.2. Ethernet - Static Configuration

DHCP is selected by default but if the user requires to change it to Static configuration; it can be changed by turning DHCP off.

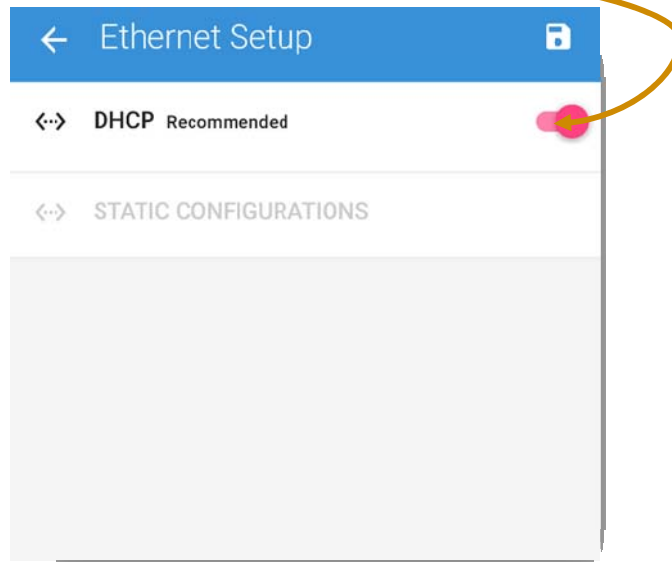

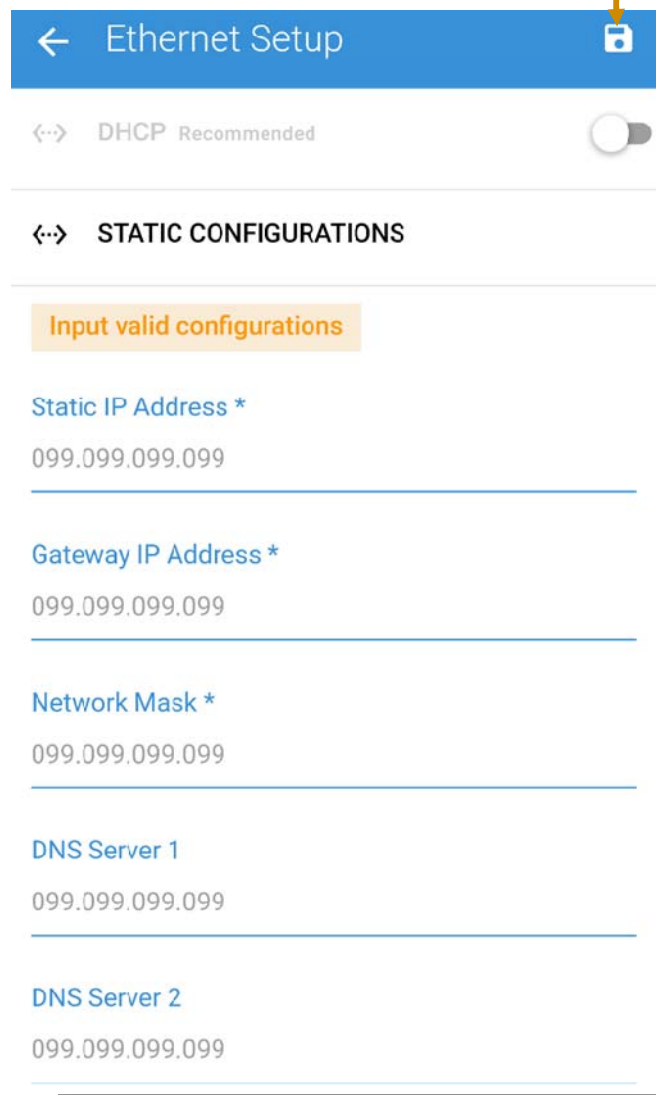

Figure 18: Ethernet Setup

User Manual for MF0200 Gateway Box

Fill in the needed fields and “click” save button.

The screenshot shows the 'Ethernet Setup' interface. At the top, there is a blue header bar with a back arrow and the title 'Ethernet Setup'. To the right of the title is a save icon (a document with a checkmark). Below the header, there is a toggle switch for 'DHCP Recommended' which is currently turned off. Underneath, there is a section titled 'STATIC CONFIGURATIONS' with a sub-header 'Input valid configurations'. This section contains five input fields, each with a label and a placeholder value '099.099.099.099': 'Static IP Address *', 'Gateway IP Address *', 'Network Mask *', 'DNS Server 1', and 'DNS Server 2'. A yellow arrow points from the text above to the save icon in the top right corner of the form.

Figure 19: Ethernet Setup- Static Configuration

The application prompts if the user wants to continue applying new settings to the CSP gateway device. Same flow is followed as described in “Ethernet DHCP”.

3.3.1.4. *Wireless Configuration*

To configure the CSP gateway device to connect to the CSP backend via wireless connection select Wi-Fi in the options and follow the following steps.

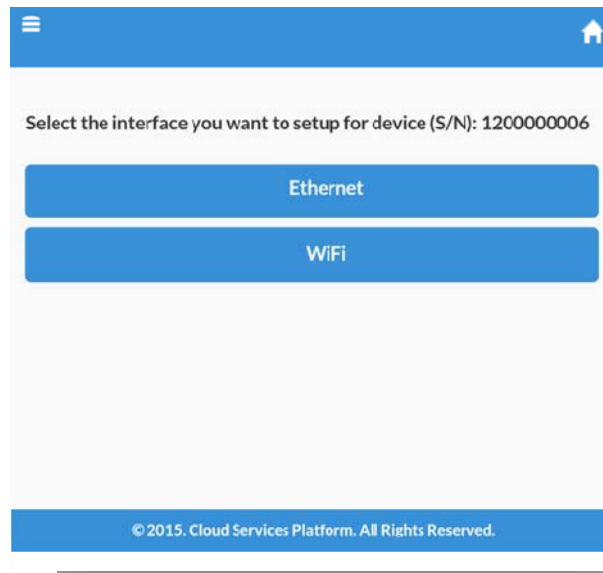

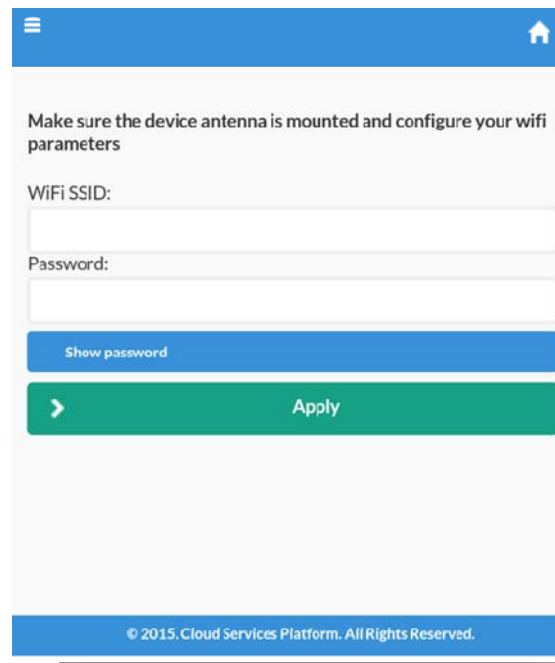

Figure 20: Configuration options

User Manual for MF0200 Gateway Box

The screenshot shows a mobile application interface for configuring the MF0200 Gateway Box. At the top, there is a blue header bar with a hamburger menu icon on the left and a home icon on the right. Below the header, a light gray box contains the instruction: "Make sure the device antenna is mounted and configure your wifi parameters". Underneath this, there are two input fields: "WiFi SSID:" and "Password:". Below the "Password:" field is a blue button labeled "Show password". At the bottom of the configuration area is a large green button with a white right-pointing arrow and the word "Apply". The footer of the application is a blue bar with the text "© 2015. Cloud Services Platform. All Rights Reserved."

Figure 21: Wi-Fi credentials

Fill in the required fields:

1. Wi-Fi SSID: the SSID for the Wi-Fi network to be used.
2. Password: password for the Wi-Fi.

User Manual for MF0200 Gateway Box

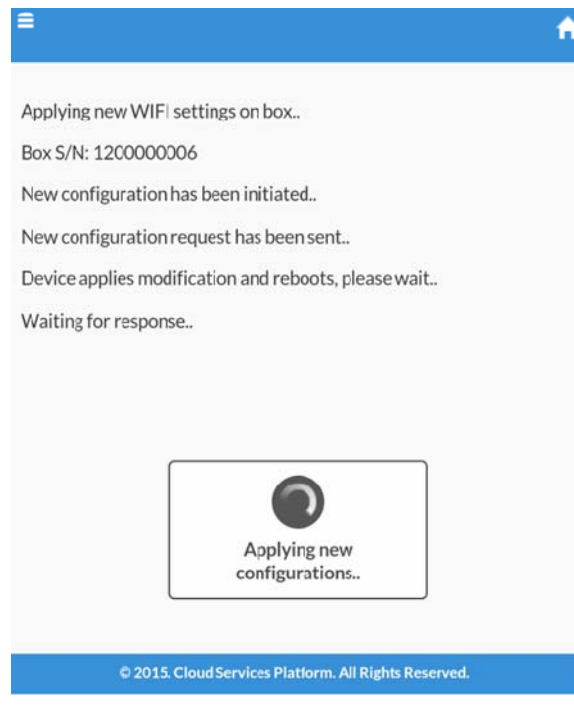

Figure 22: Applying configurations to the box\

Once the reboot of CSP gateway device is done it will be online via Wi-Fi.

3.3.2. SCAN BARCODE

Alternatively, to add the gateway with barcode place the barcode in the view provided.

Figure 23: Barcode Scanning

After the device is recognized follow the same steps as given in [Section 3.3.1.1](#) “Gateway Device Info”; up till Section 3.3.2.

3.4. FIRMWARE UPDATE

When the CSP gateway device is properly configured it will automatically update the firmware, if update is available. Operation of patch update can also be seen through LED indication, as specified in [Section no. 1.1.1. “CSP GATEWAY LED INDICATOR CHART”](#).

4. ADD PERIPHERAL DEVICE

To add the peripheral device go to the dashboard and select “Add New”.

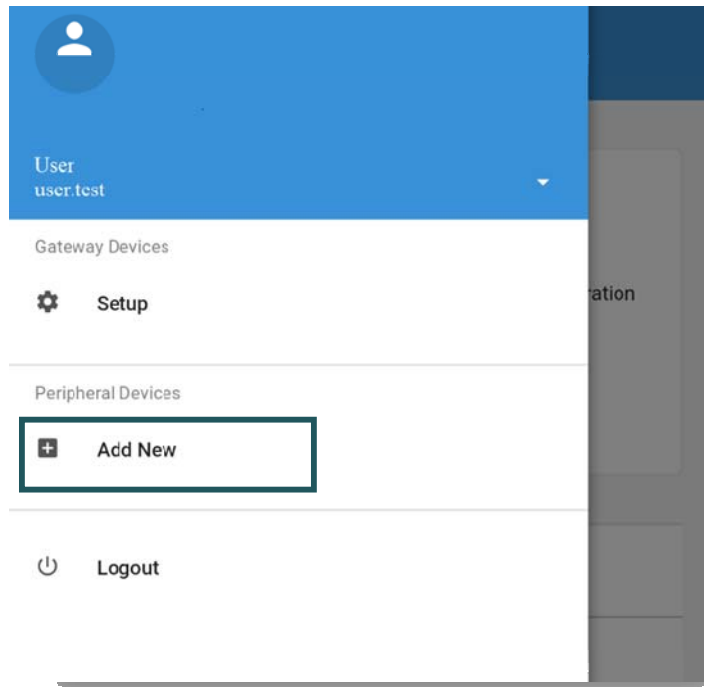

Figure 24: Dashboard

4.1. STEP 1

This will list the CSP gateway devices available for that particular account.

Figure 25: List of CSP gateway devices

Select the gateway device to add new peripheral.

4.2. STEP 2

Input the basic information of the peripheral.

The screenshot shows a mobile application interface for 'Step 2' of the setup process. The title bar is blue with a back arrow and 'Step 2' text, and a 'NEXT' button. Below the title bar, the section is titled 'Peripheral Basic Info'. The form contains five input fields: 'Peripheral Friendly Name', 'Network Address (e.g. local IP)', 'City', 'Country' (a dropdown menu currently showing 'United States'), and 'Postal Code'. Each field has a corresponding horizontal line for text entry.

Figure 26: Peripheral Basic Info

Fill in the required fields:

1. Peripheral Friendly Name: name of the peripheral for easy recognition
2. Network Address: local IP of the peripheral
3. City: name of the city
4. Country: name of the country
5. Postal code: postal code of the area

Click next when done with filling in the fields

4.3. STEP 3

The information regarding manufacturer, type and model of the peripheral are added in this step.

← Step 3 NEXT

Peripheral Type / Model

Peripheral Type
Printer

Peripheral Manufacturer
Select One

Peripheral Model

Figure 27: Peripheral Type/ Model

User Manual for MF0200 Gateway Box

Select a peripheral type to add the type of the peripheral. There are two basic types of peripherals printer and mote.

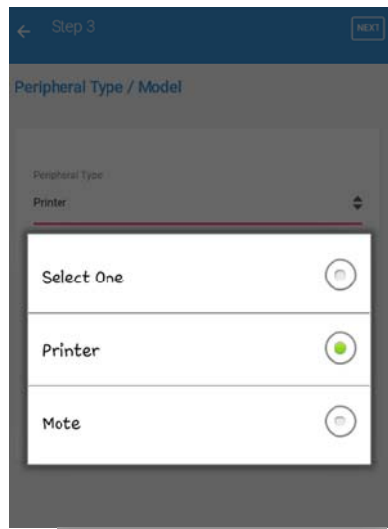

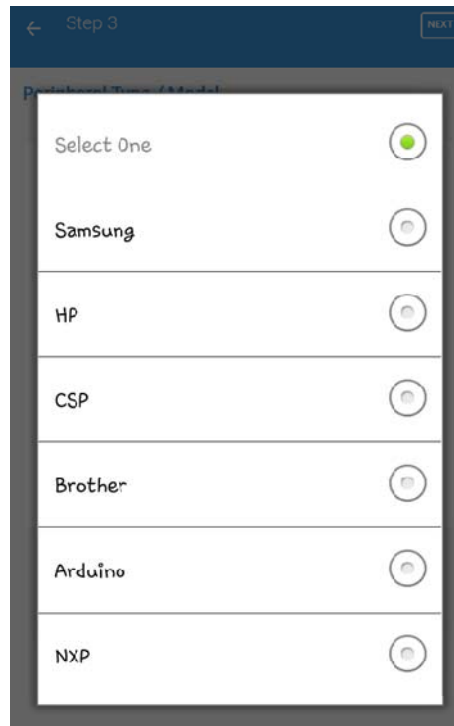

Figure 28: Types of peripheral

User Manual for MF0200 Gateway Box

After choosing the peripheral type, select the manufacturer of the

peripheral.

Figure 29: Manufacturers

After choosing the manufacturer, select the model of the peripheral and click next.

Samsung-8640_lower	<input type="radio"/>
Samsung-8640_normal	<input type="radio"/>
Samsung-6260_normal	<input type="radio"/>
11	<input type="radio"/>

Figure 30: models of peripherals

4.4. STEP 4

Add the QR and NFC details of the peripheral. It is an optional step. If the user does not wish to input this information the system would generate these codes by itself.

← Step 4 REVIEW

Peripheral QR/NFC (Optional)

Input code or Scan

SCAN BAR/QR CODE

Input NFC Value or Scan

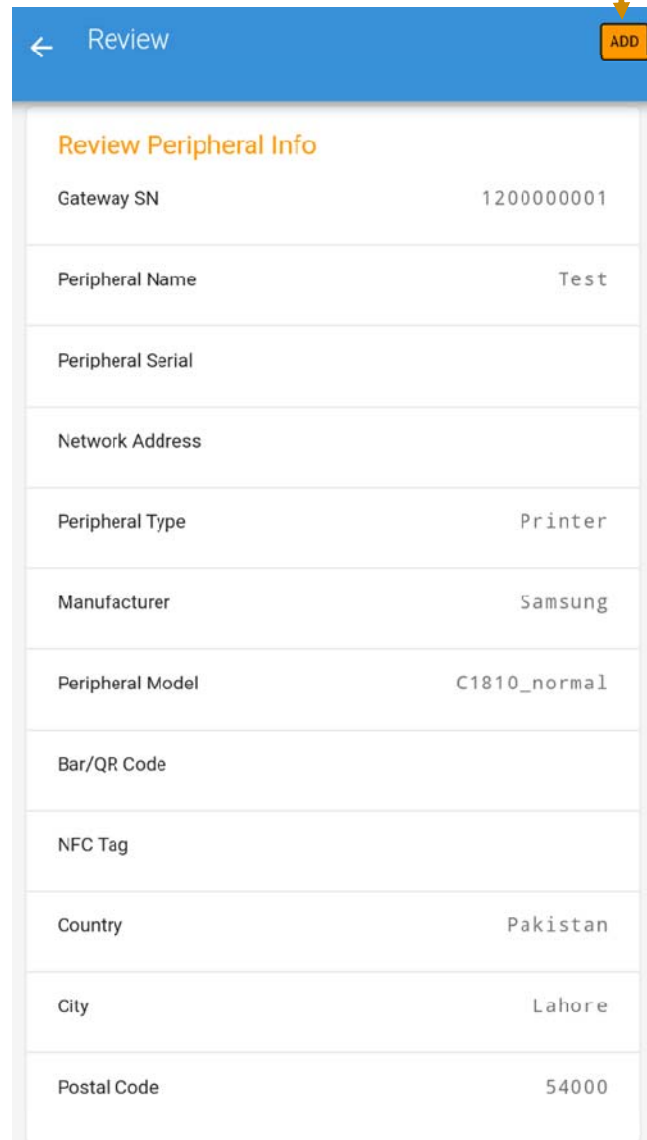

SCAN NFC TAG

Figure 31: Peripheral QR/NFC code

Both of these codes can be scanned or entered manually. Select review to see the complete information regarding the peripheral.

User Manual for MF0200 Gateway Box

The final review of the peripheral's information. Tap the add button to add the peripheral.

The screenshot shows a mobile application interface for reviewing peripheral information. At the top, there is a blue header bar with a back arrow and the word 'Review'. In the top right corner of this bar is an orange 'ADD' button, which is highlighted by an orange arrow from the text above. Below the header, the title 'Review Peripheral Info' is displayed in orange. The main content area consists of a list of fields, each with a label on the left and a value on the right:

Gateway SN	1200000001
Peripheral Name	Test
Peripheral Serial	
Network Address	
Peripheral Type	Printer
Manufacturer	Samsung
Peripheral Model	C1810_normal
Bar/QR Code	
NFC Tag	
Country	Pakistan
City	Lahore
Postal Code	54000

Figure 32: Review information

User Manual for MF0200 Gateway Box

If the peripheral is added successfully following message is displayed.

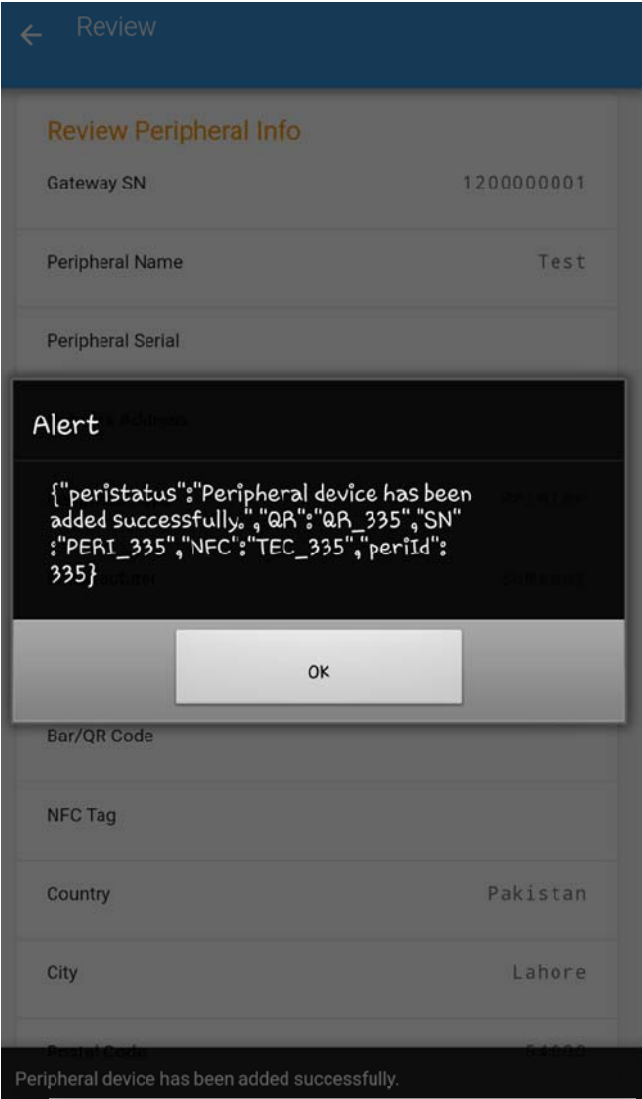

Figure 33: Success response
