3. RF Exposure

Regulation

This document is prepared to show compliance with the RF Exposure requirements as required in §1.1310 of the FCC rules and Regulations.
The limit for Maximum Permissible Exposure (MPE), specified in FCC §1.1310, is listed in Table 1-1.
According to FCC §1.1310: the criteria listed in the following table shall be used to evaluate the environmental impact of human exposure to radio-frequency (RF) radiation as specified in §1.1307(b).

Table 1 – Limits for Maximum Permissible Exposure (MPE)

Frequency Range (㎒)	Electric Field Strength [V/m]	Magnetic Field Strength [A/m]	Power Density [㎽/㎠]	Averaging Time [minute]
(A) Limits for Occupational / Controlled Exposure				
0.3 ~ 3.0	614	1.63	*100	6
3.0 ~ 30	1842/f	4.89/f	*900/f^2	6
30 ~ 300	61.4	0.163	1.0	6
300 ~ 1 500	/	/	f/300	6
1 500 ~ 15 000	/	/	5	6
(B) Limits for General Population / Uncontrolled Exposure				
0.3 ~ 1.34	614	1.63	*100	30
1.34 ~ 30	824/f	2.19/f	*180/f^2	30
30 ~ 300	27.5	0.073	0.2	30
300 ~ 1 500	/	/	f/1 500	30
1 500 ~ 15 000	/	/	1.0	30

*f=frequency in ㎒, *= plane-wave equivalent power density*

Per the guidance of KDB 680106, the E-field and H-field limits shown in the table above are extended down to 100 ㎑

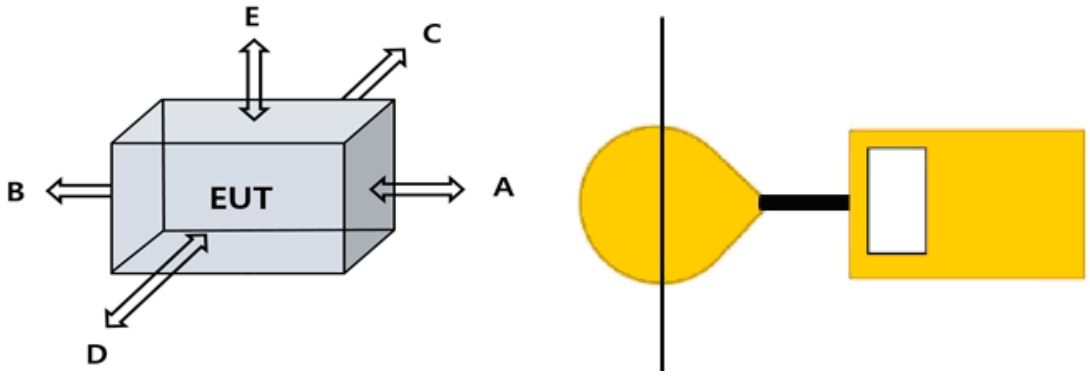
4.1. WPT(Wireless Power Transfer)

Test setup



Test configurations

In order to check configurations, EUT was evaluated with S-pen and charging condition.
The EUT information was declared by the manufacturer.

Measurement Procedure

a) The RF exposure test was performed on the table in anechoic chamber.
Testing was performed with a calibrated field probe.
b) The measurement was investigated between the edge of the charger and center of the field probe in the closest state.
c) Maximum E-field and H-field measurements were made on each of five sides of the EUT that could come in contact with a user. Five sides are defined as follows:
Right (B), Top (E), Left (A), Rear (D) and Front (C).
Refer to the test position diagram above.
d) According to the guidance of KDB 680106 D01 v03 test distance was 15 cm on the surrounding sides from the EUT.

Equipment Approval Considerations item 5.b) of KDB 680106 D01 v03

a) Power transfer frequency is less than 1 ㎒.

► This device is operates at a frequency of 531 ㎑.

b) Output power from each primary coil is less than or equal to 15 watts.

► DC 5.0 V condition / Output power from each primary coil : 0.23 watts.

c) The transfer system includes only single primary and secondary coils. This includes charging systems that may have multiple primary coils and clients that are able to detect and allow coupling only between individual pairs of coils.

► The transfer system includes only single primary and secondary coils.

d) Client device is placed directly in contact with the transmitter.

► The client device is placed directly in contact with the transmitter.

e) Mobile exposure conditions only (portable exposure conditions are not covered by this exclusion)

► Mobile exposure condition (Refer to the Pre-Approval Guidance).

f) The aggregate H-field strengths at 15 ㎝ surrounding the device and 20 ㎝ above the top surface from all simultaneous transmitting coils are demonstrated to be less than 50% of the MPE limit.

► The EUT field strength levels < 50 % of the MPE limit 1.63 A/m
0.068 7 A/m (Max) < 0.815 A/m

Test results

The probe was positioned at the location where there is maximum field strength on each side of the EUT.
