

EXHIBIT 4 - TEST SETUP PHOTOGRAPHS

Conducted Emission Test Setup*	 A photograph showing a conducted emission test setup. On the left, a wooden bench holds a spectrum analyzer and a power supply. A red cable connects the power supply to a device under test (DUT) on the floor. The DUT is a rectangular metal box with a red terminal block. A power strip is visible on the wall behind the bench. On the right, another wooden bench holds a black tablet and some cables.
Radiation Emission Test Setup (Below 30MHz)	 A photograph showing a radiation emission test setup. A white, rectangular, shielded enclosure is placed on a metal stand. A black metal frame is positioned around the enclosure. The background is a wall covered with white, square-shaped electromagnetic interference (EMI) shields. The floor is a polished metal surface.

Radiation Emission Test Setup (30MHz to 1GHz)	 A photograph of a radiation emission test setup in an anechoic chamber. A white table is positioned in the center, with a small electronic device on top. The walls are covered with white square-shaped absorbers. A metal frame with vertical rods is visible on the right side.
Radiation Emission Test Setup (1GHz to 18GHz)	 A photograph of a radiation emission test setup in an anechoic chamber. A red probe is positioned in the foreground, pointing towards a small electronic device on a white table. The walls are covered with white square-shaped absorbers. A blue probe is visible on the right side.

**Radiation Emission Test
Setup (Above 18GHz)**

*** Means' only test and setup for PART 15C .**
