(3) Country code selection ability - ☐ Yes , ☒ No If no, pls explain how it was implemented : This function is disabled via firmware setting.						
	If no, pls explain how it was	s implemented : This fund	ction is disabled via firmwa	are setting.		
(4)	M+ 45 000 / D00 047		l M			
(4)	Meet 15.202 / RSS 247 requirement - ⊠ Yes , □ No ,					
pls check below:					9	
	A master device is defined as a device operating in a mode in which it has the capability to transmit wit					
receiving an enabling signal. In this mode it is able to select a channel and initiate a network by sendi signals to other devices					nding enabling	
	A client device is defined as a device operating in a mode in which the transmissions of the device are under control					
	of the master. A device in client mode is not able to initiate a network.					
(5)	= " (' ' ' ' ' ' ' ' '	,				
(5)	For client devices that have software configuration control to operate in different modes (active scanning in some and					
	passive scanning in others) in different bands (devices with multiple equipment classes or those that operate on non-					
	DFS frequencies) or modular devices which configure the modes of operations through software, the application must					
	provide software and operations description on how the software and / or hardware is implemented to ensure that					
	proper operations modes can not be modified by end user or an installer.					
Apply, No Apply, (If apply, pls help to provide explanation on it was implement, and how software was controlled)					ntrolled)
