

RF exposure information

FCC ID: 2AKGI-FH2014

Product name: FanHua Speakers

Models name: FH2014

1. Introduction:

This product is FanHua Speakers with Bluetooth function operated in 2402~2480 MHz frequency band.

2. Output power considerations:

Worst case output power: $-0.01\text{dBm} = 0.998\text{mW}$ (at 2480MHz)

3. Compliance criteria:

According to 447498 D01 General RF Exposure Guidance v05 the 1-g and 10-g SAR test exclusion thresholds for 100 MHz to 6 GHz at test separation distances ≤ 50 mm are determined by:

$[(\text{max. power of channel, including tune-up tolerance, mW}) / (\text{min. test separation distance, mm})] \cdot [\sqrt{f(\text{GHz})}] \leq 3.0$ for 1-g SAR and ≤ 7.5 for 10-g extremity SAR,

Where:

$f(\text{GHz})$ is the RF channel transmit frequency in GHz

Power and distance are rounded to the nearest mW and mm before calculation

Calculate:

$$(0.998/5) * \sqrt{2.48} = 0.314 < 3 \text{ for 1g SAR}$$

Then SAR evaluation is not required.
