Technical Specs

Charging Voltage	5VDC
Charging Current	200mAh~2A
Tracker Dimensions	58.4×32. 3×17.2mm
Battery	3.8V 460mAh
Weight	31.6g
Charging Time	< 120 mins
Standby Time	> 3 days
GPS Precision	5-10m(Open Area)
Waterproof	IP67

Warnings

Please pay attention to the points below while using our tracker.

- Please do not use the tracker in area where wireless transmittable devices are not allowed.
- To avoid battery damage, please use the charger that was provided.
- Avoid using the tracker for an extended period of time, as this can lead to shorter battery life.
- Exposure to heavy sunlight and dust can lead to aging of the device, and should be avoided.

If the tracker has been damaged or not working properly, please inquire with our customer service team for help.

FCC Caution:

Any Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment. This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Note: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

13

Specific Absorption Rate (SAR) information

Specific Absorption Rate (SAR) information
SAR tests are conducted using standard operating positions accepted by the FCC with the device transmitting at its highest certified power level in all tested frequency bands, although the SAR is determined at the highest certified power level, the actual SAR level of the device while operating can be well below the maximum value, in general, the closer you are to a wireless base station antenna, the lower the power output. Before a new model device is available for sale to the public, it must be tested and certified to the FCC that it does not exceed the exposure limit established by the FCC. Tests for each device are performed in positions and locations as required by the FCC.

For body worn operation, this model device has been tested and meets the FCC RF exposure guidelines when used with an accessory designated for this product or when used with an accessory that contains no metal in the assembly. Non-compliance with the above restrictions may result in violation of RF exposure guidelines.
