Maximum Public Exposure to RF (MPE) CFR 1.1310 (e) & RSS-102, clause 4

The maximum exposure level to the public from the EUT shall not exceed a power density, **S**, per the table below.

NOTE: The calculation performed for this EUT were performed for antenna with a maximum gain of 6 dBi, to determine the minimum distance required in order to remain compliant with the permissible exposure levels. If different antenna gain or distance is to be used, the permissible exposure levels of Table 1 below must be respected.

Table 1—Limits for Maximum Permissible Exposure (MPE)

Frequency range (MHz)	Electric field strength (V/m)	Magnetic field strength (A/m)	Power density (mW/cm^2)	Averaging time (minutes)
Limits for General Population/Uncontrolled Exposure				
0.3-1.34	614	1.63	*100	30
1.34-30	824/f	2.19/f	*180/f^2	30
30-300	27.5	0.073	0.2	30
300-1,500			f/1500	30
1,500-100,000			1.0	30

f = frequency in MHz * = Plane-wave equivalent power density
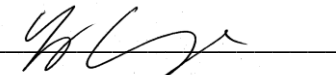

Equation for S (Power density):

$$S= P*G/(4\pi R^2)$$

Therefore, for:

In the band of 30-300 MHz from Table 1 above:

> Peak Power (mW) = 2307 mW
> Antenna Gain (dBi)= 6 dBi (3.98 numeric)
> MPE limit (S) = 0.2 mW/cm^2

Minimum distance from human=

RSS-102, Clause 4 Exposure Compliance for 48-300 MHz:

According to RSS-102 Issue 5, Table 4, the limit for EUT operating in this band is 1.29 W/m^2. The FCC limit is much lower than this value therefore compliance with the FCC requirements for MPE at the calculated minimum distance will ensure compliance with the General Public Uncontrolled Environment of RSS-102.
