1.4. Applied Reference Documents

Leading reference documents for testing:

| No. | Identity | Document Title |
|-----|--------------------------|--|
| 1 | 47 CFR§2.1091 | Radiofrequency Radiation Exposure Evaluation: mobile devices |
| 2 | KDB 447498 D01v06 | General RF Exposure Guidance |

2. DEVICE CATEGORY AND RF EXPOSURE LIMIT

Per user manual, Based on 47CFR 2.1091, this device belongs to mobile device category with General Population/Uncontrolled exposure.

Mobile Devices:

47CFR 2.1091(b)

For purposes of this section, a mobile device is defined as a transmitting device designed to be used in other than fixed locations and to generally be used in such a way that a separation distance of at least 20 centimeters is normally maintained between the transmitter's radiating structure(s) and the body of the user or nearby persons. In this context, the term "fixed location" means that the device is physically secured at one location and is not able to be easily moved to another location. Transmitting devices designed to be used by consumers or workers that can be easily re-located, such as wireless devices associated with a personal computer, are considered to be mobile devices if they meet the 20 centimeter separation requirement.

GENERAL POPULATION / UNCONTROLLED EXPOSURE

The general population/uncontrolled exposure limits are applicable to situations in which the general public may be exposed or in which persons who are exposed as a consequence of their employment may not be made fully aware of the potential for exposure or cannot exercise control over their exposure. Members of the general public would come under this category when exposure is not employment-related; for example, in the case of a wireless transmitter that exposes persons in its vicinity. Warning labels placed on low-power consumer devices such as cellular telephones are not considered sufficient to allow the device to be considered under the occupational/controlled category, and the general population/uncontrolled exposure limits apply to these devices.

TABLE 1—LIMITS FOR MAXIMUM PERMISSIBLE EXPOSURE (MPE)

| Frequency range (MHz) | Electric field strength (V/m) | Magnetic field strength (A/m) | Power density (mW/cm ²) | Averaging time (minutes) |
|---|-------------------------------|-------------------------------|-------------------------------------|--------------------------|
| (B) Limits for General Population/Uncontrolled Exposure | | | | |
| 0.3-1.34 | 614 | 1.63 | *(100) | 30 |
| 1.34-30 | 824/f | 2.19/f | *(180/f ²) | 30 |
| 30-300 | 27.5 | 0.073 | 0.2 | 30 |
| 300-1500 | - | - | f/1500 | 30 |
| 1500-100,000 | - | - | 1.0 | 30 |

f = frequency in MHz

* = Plane-wave equivalent power density

3. MEASUREMENT OF CONDUCTED PEAK OUTPUT POWER

1. EUT Average output power

| Band | Channel | Frequency (MHz) | Output Power(dBm) |
|------|---------|--------------------|----------------------|
| | | | GFSK |
| ISM | 0 | 2402 | -4.40 |
| | 19 | 2440 | 1.69 |
| | 39 | 2480 | -3.06 |

4 RF EXPOSURE EVALUATION

Standalone transmission MPE evaluation

| Bands | Frequency (MHz) | Antenna Gain (dBi) | Conducted Average Power (dBm) | Time-averaging EIRP (mW) | Power density (mW/cm ²) | Limit for MPE (mW/cm ²) |
|--------|--------------------|--------------------------|-------------------------------------|--------------------------------|---|---|
| 2.4GHz | 2440 | 3.0 | 1.69 | 2.94 | 0.001 | 2.705 |

1. MPE calculation method

$$\text{Power Density} = \text{EIRP}/4\pi R^2$$

Where: $\text{EIRP} = P \cdot G$

P = Peak out power

G = Antenna gain

R = Separation distance (20cm)
