

The Electrical changes to the Revised IQ

Mainboard

The main board electronics has been revised.

This means the main board electronics is completely new, but functionality is exactly the same as earlier version IQ. (See the test plan - doc no. HC-TPLN-0112 - for technical specs)

Lens Module

The original lens module is reused, but a second source lens module has been introduced as well.

Everything is carried over to the second source, but the optics. And because of this, the lens modules are different lengths.

Mechanical

The updated mainboard and the different size optics have resulted only minor changes to the mechanics. All mechanical differences are presented in document no. 14 in this file package.
