**UNII Device Declaration Letter**

To whom it may concern:

We have declared below featured for FCC equipment authorization,

Device FCC ID: 2AM5I-M101C

(1) DFS Device:  Master  Client with Radar detection  
capability

(2)  N/A  Client without radar detection  
capability,

(3) Active / Passive Scanning , adhoc mode access point  
capability

Frequency Band (MHz)	Active Scanning (the device can transmit a probe (beacon)) 【主动发射】		passive scanning (where the device is can listen only with no probes) 【LBT设备】		Ad Hoc Mode Capability 【支不支持AD-HoC 功能】		Access point Capability 【兩個設備不通過 網絡進行點對點的 數據傳輸】

(4) Country code selection ability  Yes  No  
(5) If yes, pls explain how it was implemented:

(6)

Meet 15.202 requirement

Yes

No

(7)

pls check below :

A master device is defined as a device operating in a mode in which it has the capability to transmit without receiving an enabling signal. In this mode it is able to select a channel and initiate a network by sending enabling signals to other devices

A client device is defined as a device operating in a mode in which the transmissions of the device are under control of the master. A device in client mode is not able to initiate a network.

(8)

For client devices that have software configuration control to operate in different modes (active scanning in some and passive scanning in others) in different bands (devices with multiple equipment classes or those that operate on non- DFS frequencies) or modular devices which configure the modes of operations through software, the application must provide software and operations description on how the software and / or hardware is implemented to ensure that proper operations modes cannot be modified by end user or an installer.

(9)

Apply       Does not apply

(10)

(If apply, pls help to provide explanation on it was implement, and how software was controlled)

Sincerely,
