

Installation Guide

TOAST HARDWARE

Welcome to the Toast family.

We're so excited you're here! Toast Hardware was developed to withstand the most demanding restaurant conditions - spills, grease, and heat - so your restaurant is always running at full speed. With a restaurant-grade structure, best-in-class processing speeds, intuitive layout and sleek design, Toast Hardware makes it easier for you to run your restaurant, delight guests and generate revenue.

Use this booklet to install your new Toast Hardware. We designed setup to be completed within 30 minutes with intuitive, simple packaging, color-coded wiring and easy-to-follow instructions. Have questions along the way? Contact Toast Support.

Choose Your Bundle

You'll follow the installation instructions for the hardware bundle you purchased.

Before Getting Started

- ✓ Clean your counter, make sure your counter space is cleared and wiped down.
- ✓ Unplug your current POS hardware and remove it from the counter so your counter space is completely clear.
- ✓ Wipe down the countertop with the alcohol wipe provided in your box.

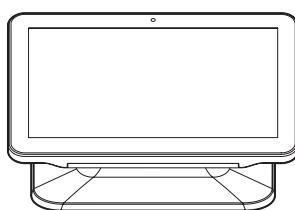

Starting with a fresh surface makes it easier to install!

Cabling Diagram

Toast Flex + Toast Printer

Use the cabling diagram as a guide for how your system will be wired when it's all set up.

Toast Flex for Guest

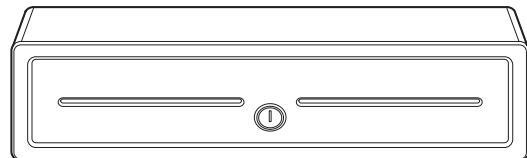

USB-C
(Only if user has a
Toast Flex for Guest)

Toast Tap (On-Counter)

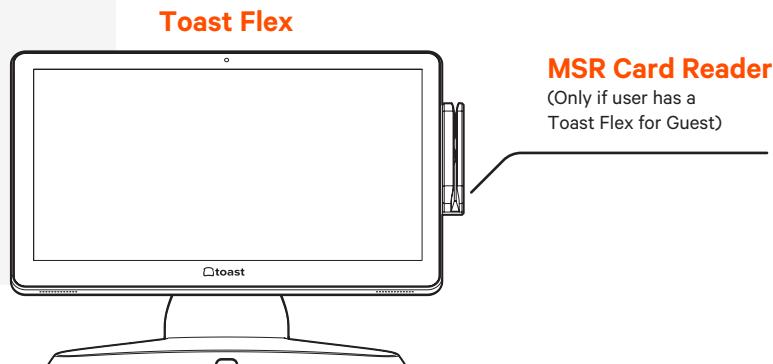

**USB-A to
Micro USB**

Cash Drawer

**Cash Drawer Kick
(CD-101)**

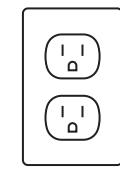

MSR Card Reader
(Only if user has a
Toast Flex for Guest)

Ethernet Cable

Internet

Wall Outlet

NOTE

If you have an additional terminal, connect the second power brick from the base of the terminal stand to the wall. Connect the second ethernet cable from the Toast Printer to the base of the terminal stand.

If you are using direct attachment for Toast Flex for Guest, this is already in place on the Toast Flex terminal.

For a full service restaurant, you will have the Toast Tap (Direct Attach to Toast Flex) already in place instead of a Toast Tap (On-Counter).

Toast Flex + Toast Printer

1 Unpack your hardware:

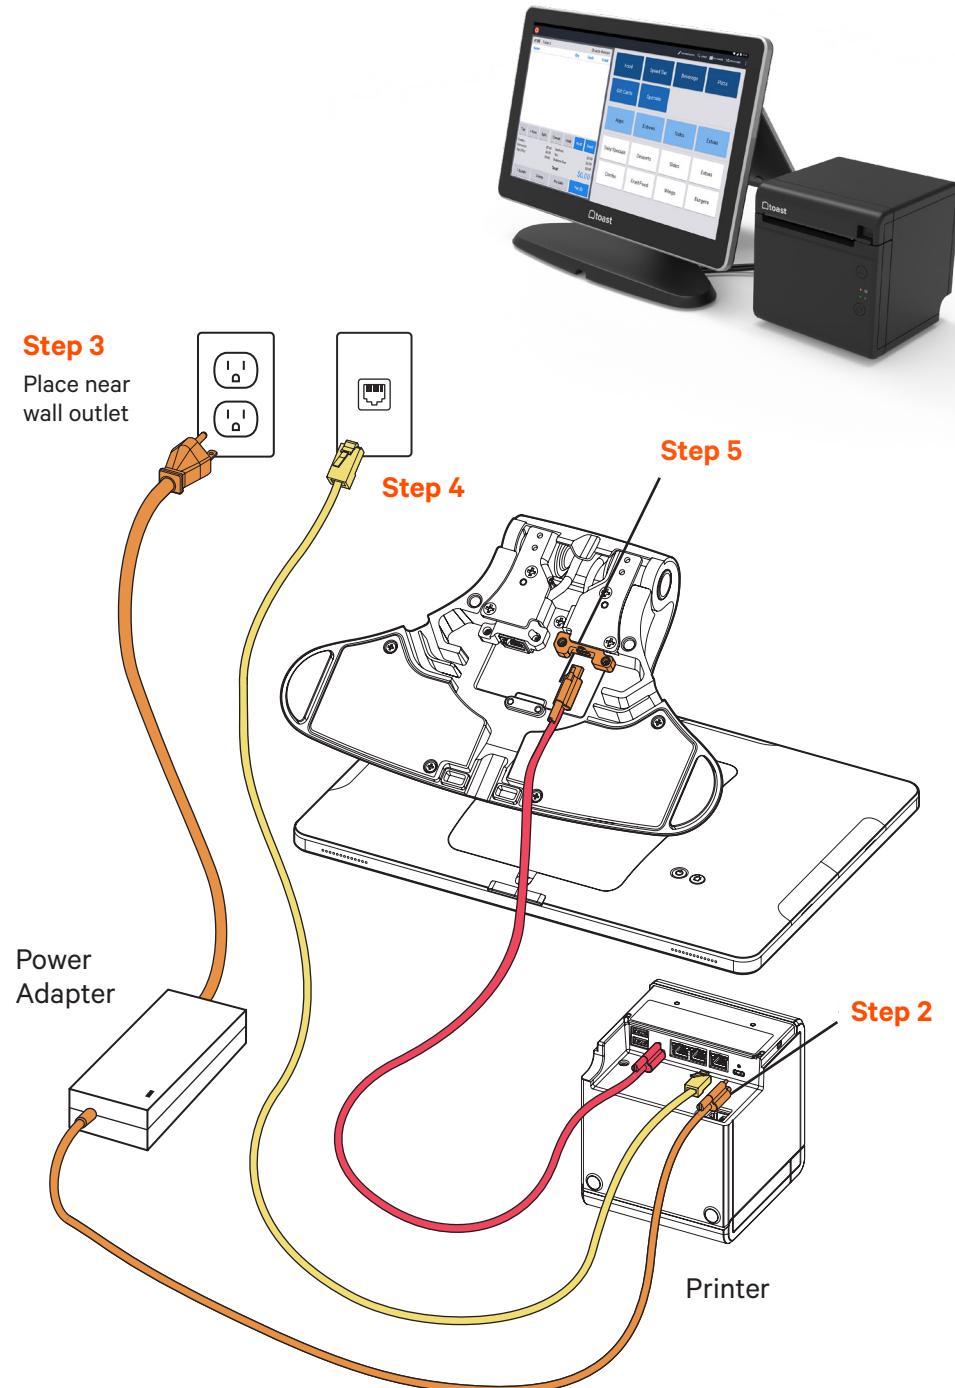

- Unpack the Toast Printer first. It will contain a USB-C to USB-C cable with a red end and an orange end. It will also contain a wall mounting bracket, paper, and a Toast TP200 Printer Quick Start Guide.
- Unpack the Toast Flex terminal box next. This box has two smaller boxes inside: an orange box and a yellow box.

2 Next, remove the orange box labeled “Power.” This box contains the power adapter. Plug it into the orange port labeled “Power In” on the **Toast Printer**. Use the **thumb screw** to secure it.

3 Then, place the other end near the wall outlet, but don’t plug it into the outlet yet. Placing it near the outlet now will help you know where you want to coil or hide your cables at the end of installation.

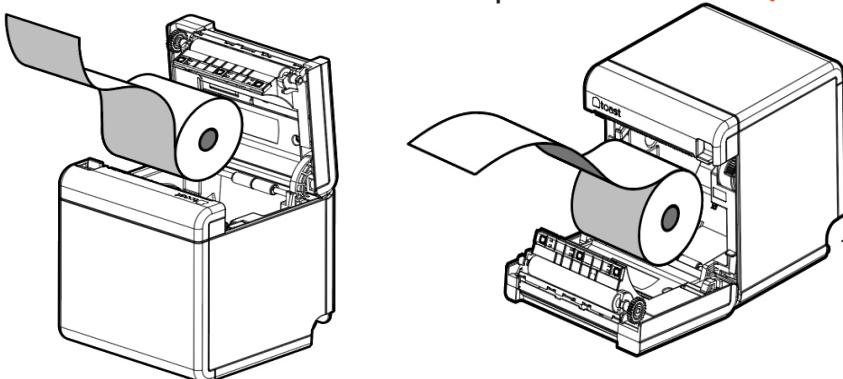

4 Next, remove the yellow box labeled “Connect.” This box contains two yellow ethernet cables. One is 3 ft and one is 7 ft. Choose the cord length that best suits your restaurant and connect it from the wall to the yellow port labeled “Internet IN” on the **Toast Printer**.

5 Take the red end of the USB-C cable and plug it into the red “To Stand” port on the **Toast Printer**. Take the other end and connect it to the orange port on the base of the **terminal stand**. Use the **thumb screw** to secure it. Ensure the thumbscrew is tight to avoid connectivity issues.

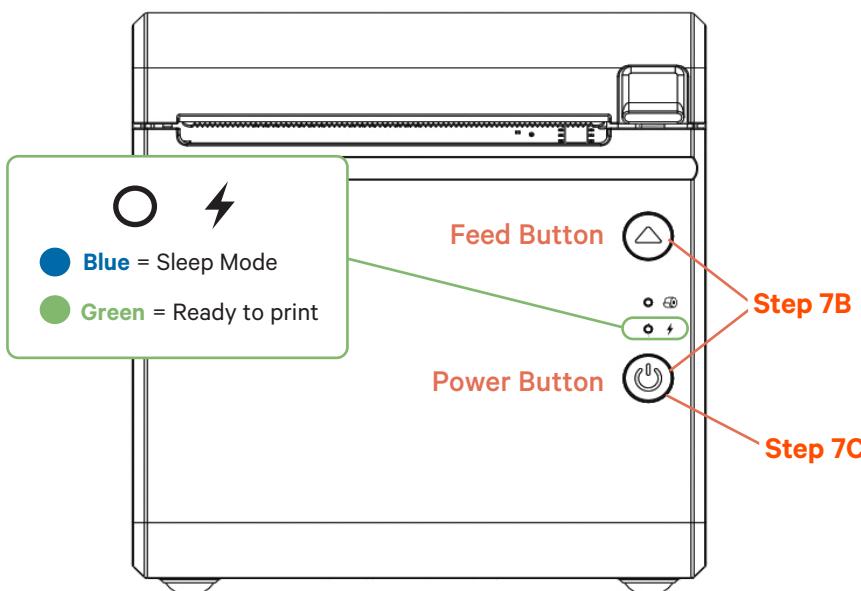

Load Paper

Step 6B

Configure Toast Printer

After configuring your Toast Printer, the LED will be blue if the printer is in Sleep mode. This happens if the printer is turned off or unplugged. To power it back on, hold the Power button until the LED turns green.

Toast Flex + Toast Printer

6

Next, it's time to load the printer paper! To do this:

- A Pull the latch on the front of the Toast Printer and open the cover.
- B Insert the full size roll of 80 mm thermal paper. The paper should exit on the opposite side of the cover. See the images to the left on how to position the paper correctly.
- C Close the Toast Printer cover.

7

Configure your Toast Printer to start working! To do this:

- A Plug the orange cord into the wall outlet. (From Step 3) Then, hold the **power** button until the LED is blue. This puts the printer into **Sleep** mode so you can configure it.
- B Hold the **Feed** button and the **Power** button at the same time, then release the **Power** button. Your Toast Printer will print out the printer's test form and the blue LED will turn **green**.

NOTE This step must be completed.

- C On the test form there will be an IP Address (ex.192.168.192.169). The IP Address number will be used to configure your Toast Printer in the Toast back-end.

For more information on this process, check out the [Creating a New Printer](#) article in Toast Central.

Toast Flex + Toast Printer

CONTINUED

- 8 If you have a cash drawer, plug in the cash drawer cable, which is grey with blue dots, from your cash drawer to your Toast Printer.
- 9 If you have a wedge mount Toast Flex for Guest, plug the green USB-C cable into the green port labeled "GFD" on the terminal stand.

TIP

You can coil extra cable under the Toast Flex for Guest connector bay.

NOTE

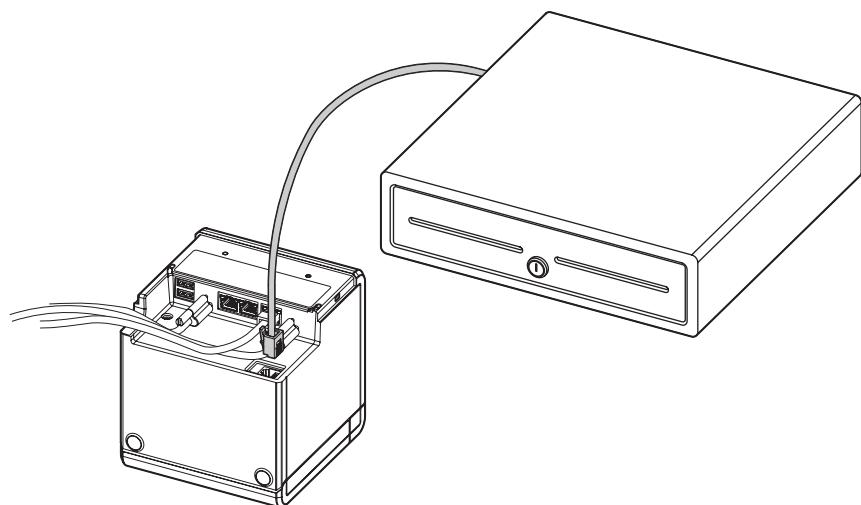

If you are using the direct attachment for Toast Flex for Guest, this is already in place on the Toast Flex terminal. (See image on the right)

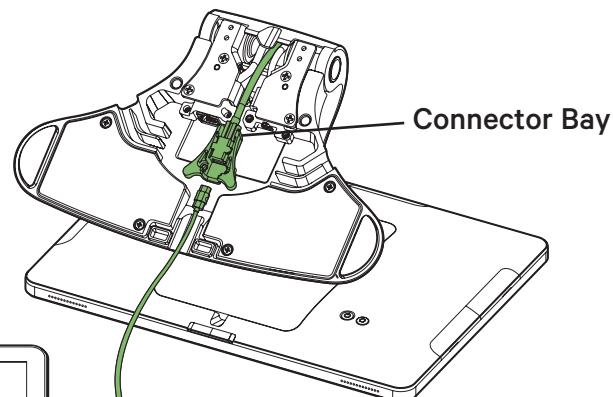

- 10 Set up payment using one of the options below:

- A If you are attaching your Toast Tap (On-Counter) to the Toast Flex, open the purple box labeled **"Payments."** This box contains your Toast Tap (On-Counter). Follow the instructions in the printed guide for **Micro USB to Micro USB**.
 - B If you have Toast Tap (Direct Attach to Toast Flex), this will already be adhered to your Toast Flex terminal.

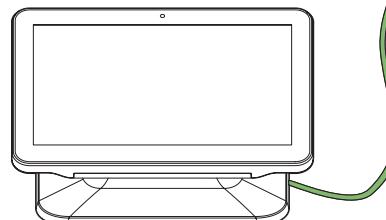

Step 8

Step 9

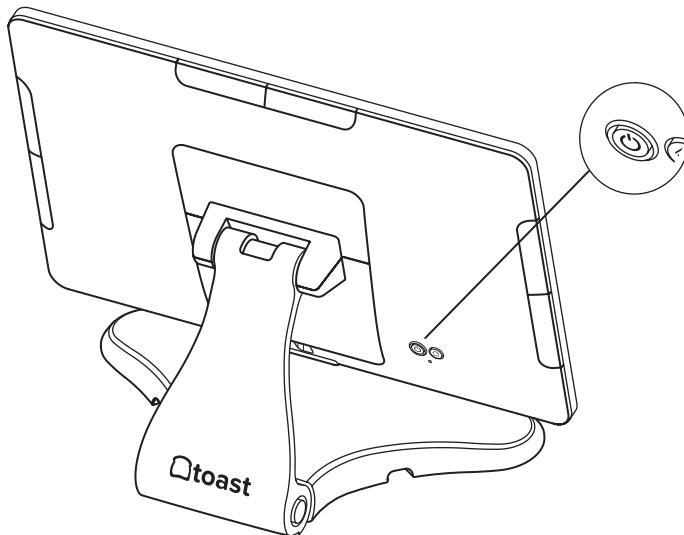

Wedge Mount

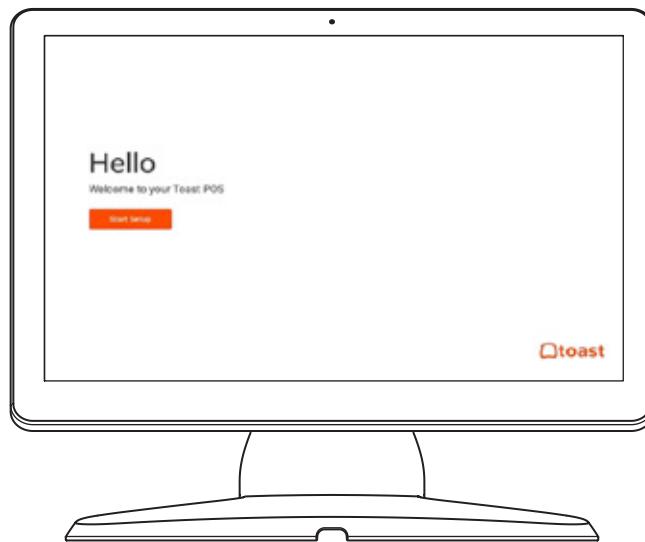

Step 11

Power on your Toast Flex

Step 12

Follow Toast setup instructions

Toast Flex + Toast Printer

11 Power on the Toast Flex terminal and follow the Toast setup instructions that appear. (See images on the left)

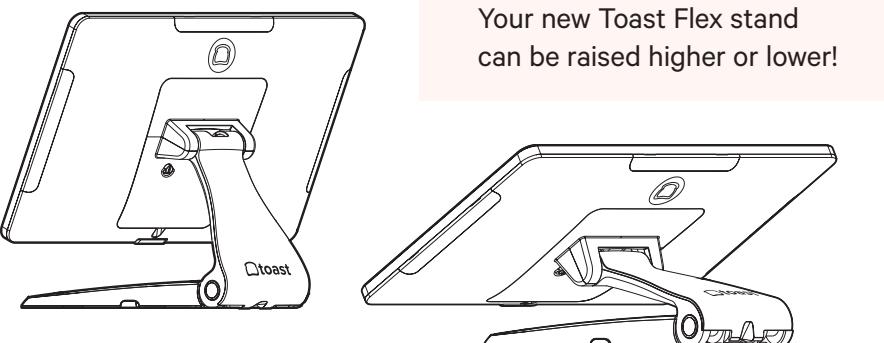

12 Log into your restaurant in the Toast App and complete basic setup.

NOTE

You may need to update the Toast App when you open it for the first time.

13 The last step is to turn on EMV. EMV must be turned on to accept payment on your new Toast system. See page 13 for EMV set up instructions.

Your Toast Flex + Toast Printer are set up!

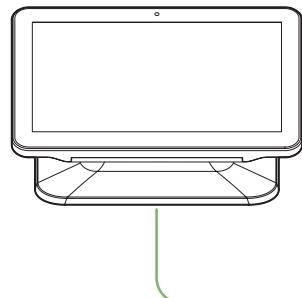

Cabling Diagram

Toast Flex + Toast Hub

Use the cabling diagram as a guide for how your system will be wired when it's all set up.

Toast Flex for Guest

USB-C
(Only if user has a
Toast Flex for Guest)

NOTE

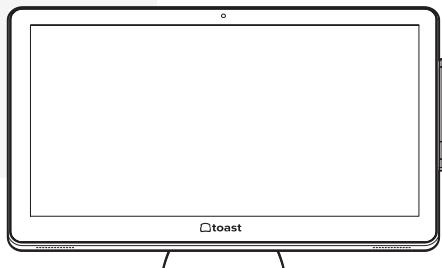

If you have a second terminal, connect the second power brick from the base of the terminal stand to the wall. Connect the second ethernet cable from the Toast Hub to the base of the terminal stand.

Toast Tap
(On-Counter)

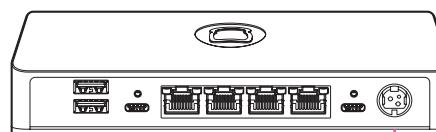

USB-A to Micro USB

Toast Flex

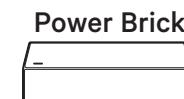

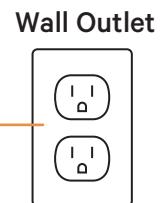

Toast Hub

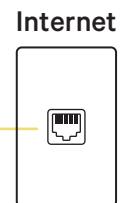

USB-C

MSR Card Reader

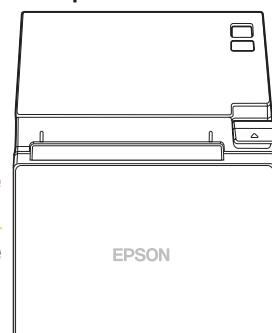

(Only if user has a
Toast Flex for Guest)

Ethernet Cable

Epson Printer

Printer Power Cable

Ethernet Cable

If you are using direct attachment for Toast Flex for Guest, this is already in place on the Toast Flex terminal.

For a full service restaurant, you will have the Toast Tap (Direct Attach to Toast Flex) already in place instead of a Toast Tap (On-Counter).

Toast Flex + Toast Hub

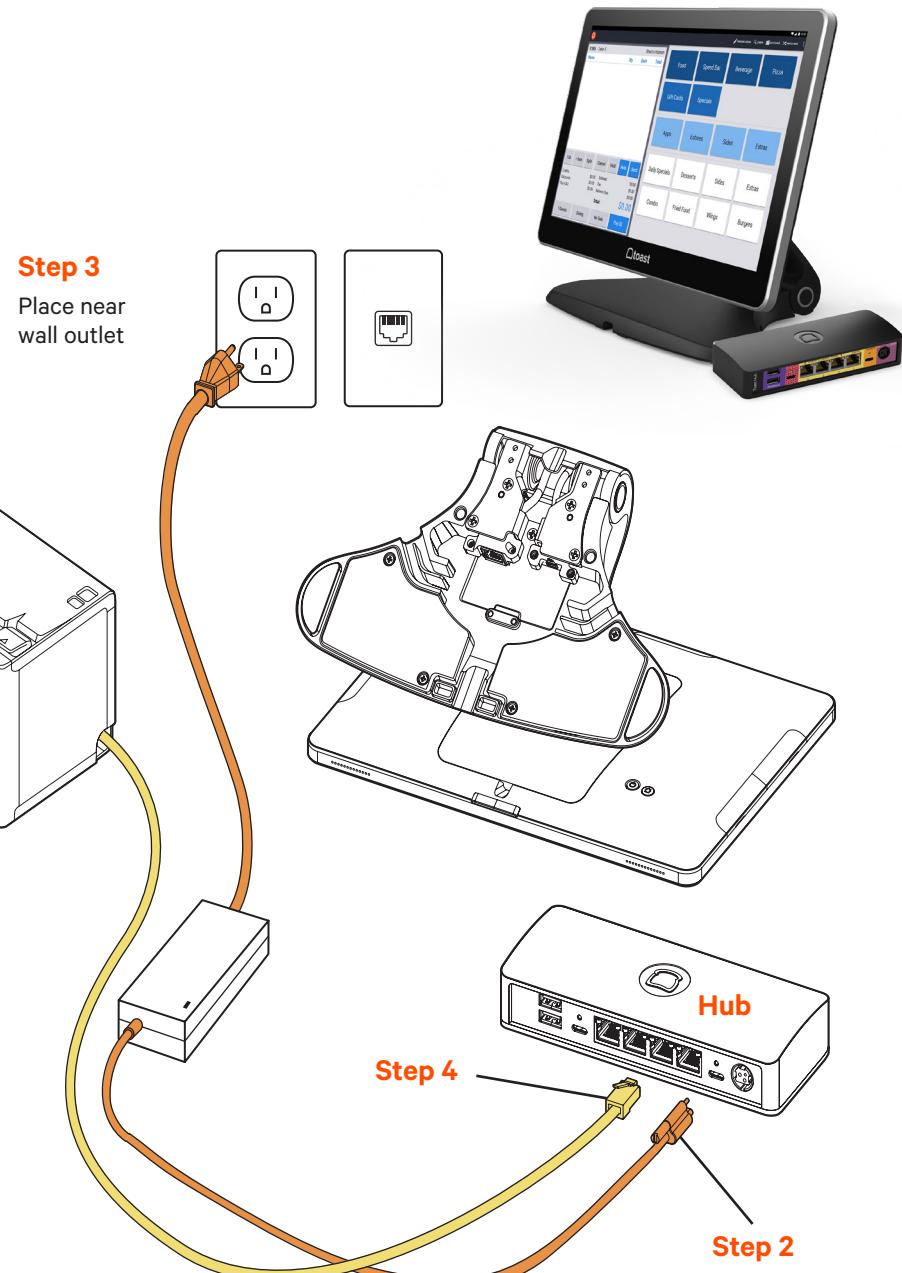

1 Unpack your hardware:

- Unpack the Epson Printer box first.
- Unpack the Toast Hub box. This box contains three cables:
 - Ethernet Cable (Yellow)
 - USB-C - USB-C Cable (One end is red and one end is orange)
 - Epson Power Cable (Pink with black stripes)
- Unpack your Toast Flex terminal and place it on the counter. This box has two smaller boxes inside:
 - An orange box and a yellow box.

2 Next, remove the orange box labeled “**Power**.” This box contains the power adapter. Plug it into the orange port labeled “**Power In**” on the **Toast Hub**. Use the thumb screw to secure it. Ensure the thumbscrew is tight to avoid connectivity issues.

3 Then, place the other end near the wall outlet, but don’t plug it into the outlet yet. Placing it near the outlet now will help you know where you want to coil or hide your cables at the end of installation.

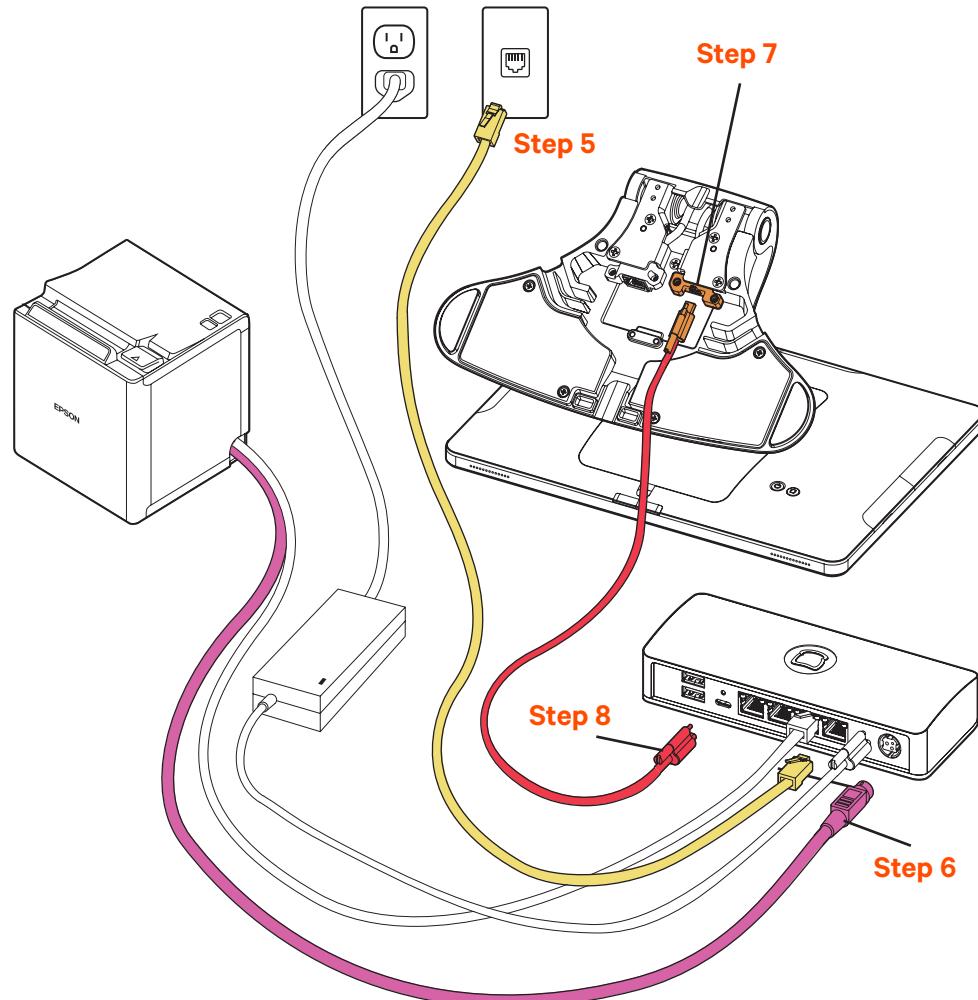

4 Next, plug the yellow ethernet cable that was packed in the Toast Hub box and connect it from the Epson printer to the yellow port labeled “**Printer**” on the **Toast Hub**.

Toast Flex + Toast Hub

CONTINUED

- 5 Remove the yellow box labeled **“Connect.”** This box contains two ethernet cables. One is 3 ft and one is 7 ft. Choose the cord length that best suits your restaurant and connect it from the wall to the yellow port labeled **“Printer”** on the **Toast Hub**.
- 6 Plug the striped pink Epson power cable from the Epson printer to the striped pink port labeled **“Printer In”** on the **Toast Hub**.
- 7 Take the orange end of the USB-C cable and plug it into the orange port in the base of the **Toast Flex** terminal. Use the thumb screw to secure it.
- 8 Take the red end of the USB-C cable and plug it into the red port labeled **“To Stand”** on the **Toast Hub**. Use the thumb screw to secure it. This cable sends both data and power to your **Toast Flex** terminal.

Toast Flex + Toast Hub

CONTINUED

- 9 If you have a cash drawer, plug in the cash drawer cable, which is grey with blue dots, from your cash drawer to the printer.
- 10 If you have a wedge mount Toast Flex for Guest, plug the green USB-C cable into the green port labeled “GFD” on the Toast Flex terminal stand.

TIP

You can coil extra cable under the Toast Flex for Guest connector bay.

NOTE

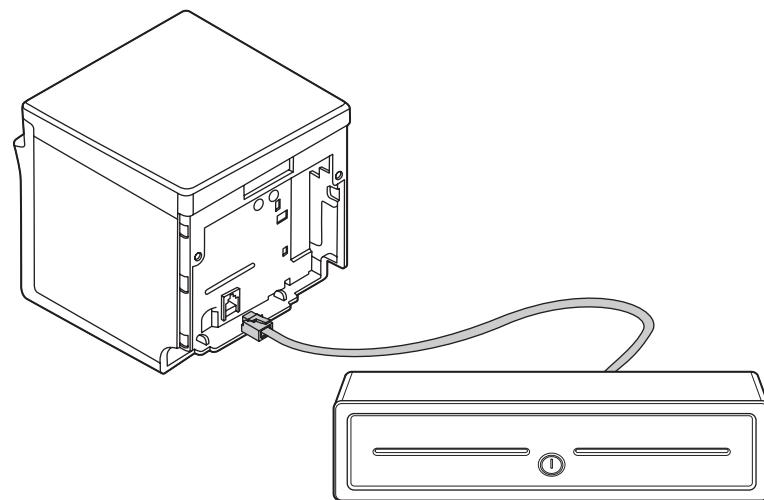

If you are using the direct attachment for Toast Flex for Guest, this is already in place on the Toast Flex terminal. (See image on the right)

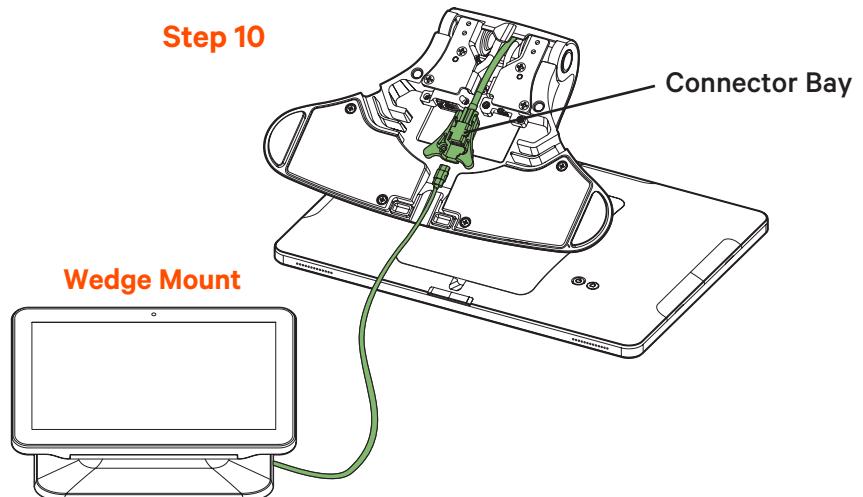

- 11 Set up payment using one of the options below:

- A If you are attaching your Toast Tap (On-Counter) to the Toast Flex, open the purple box labeled “Payments.” This box contains your Toast Tap (On-Counter). Follow the instructions in the printed guide for **Micro USB to Micro USB**.
 - B If you have Toast Tap (Direct Attach to Toast Flex), this will already be adhered to your Toast Flex terminal.

Step 9

Step 10

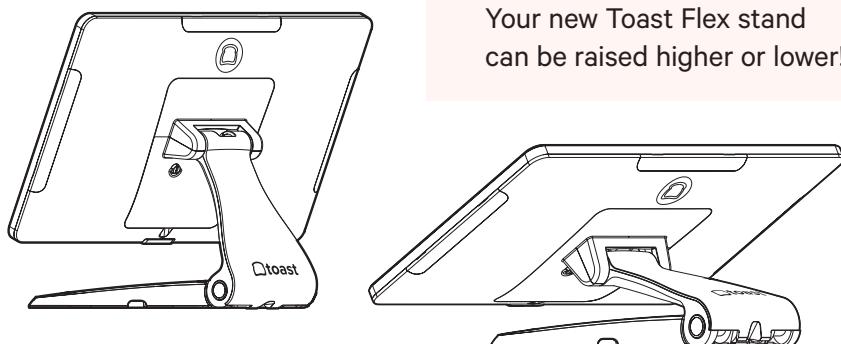

Toast Flex + Toast Hub

FINAL STEPS

- 12 Now, plug in the orange power cord into the wall outlet. (From Step 3)
- 13 Power on the Toast Flex terminal and follow the Toast setup instructions that appear. (See images on the right.)
- 14 Log into your restaurant in the Toast App and complete basic setup.
- 15 The last step is to turn on EMV. EMV must be turned on to accept payment on your new Toast system.
See page 13 for EMV set up instructions.

Your Toast Flex + Toast Hub are set up!

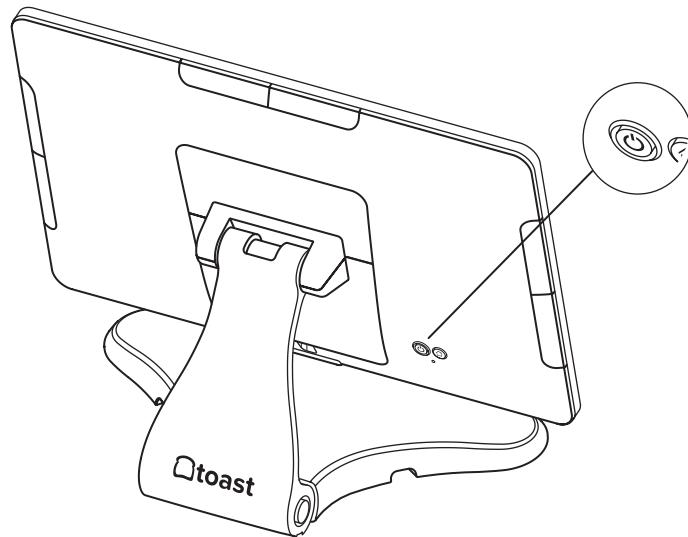

TIP

Your new Toast Flex stand can be raised higher or lower!

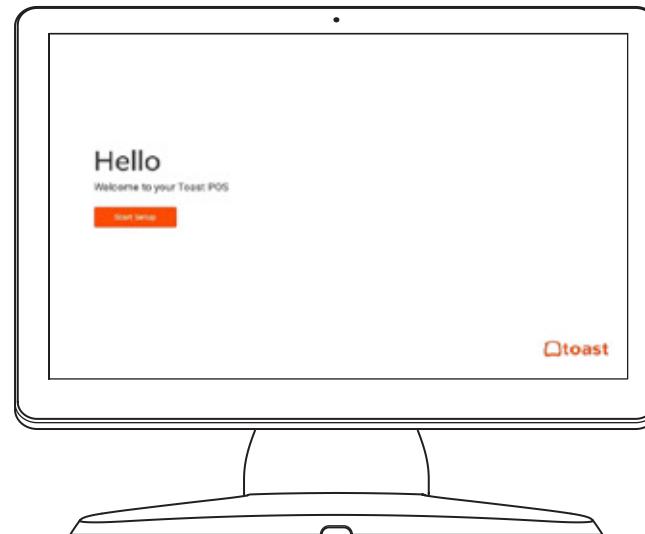

Step 13

Power on your Toast Flex

Step 14

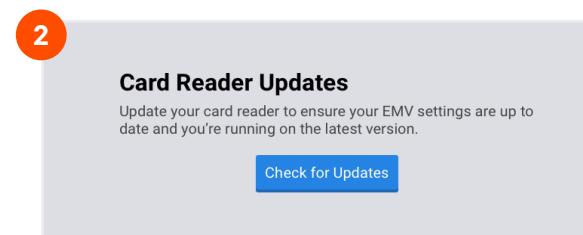

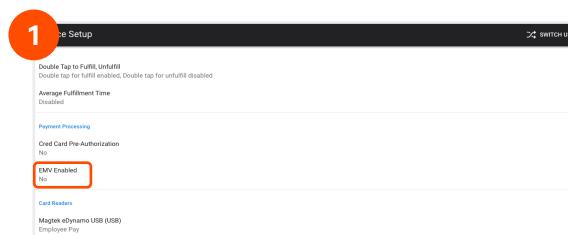

Follow Toast setup instructions

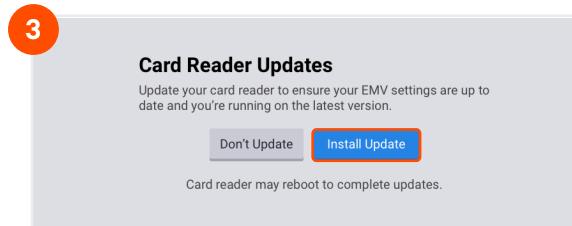

Configuring EMV for your Toast System in the Toast App

Your Toast system is EMV capable.

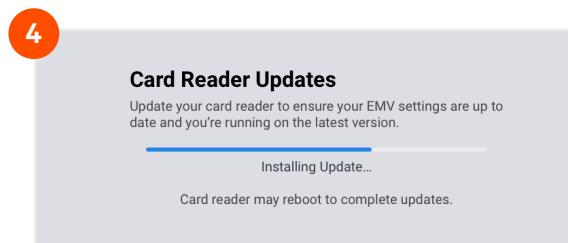

EMV is a credit card payment process that checks cards embedded with a computer chip for their legitimacy. Enabling EMV will allow for dipping and tapping of credit cards on the Toast Tap.

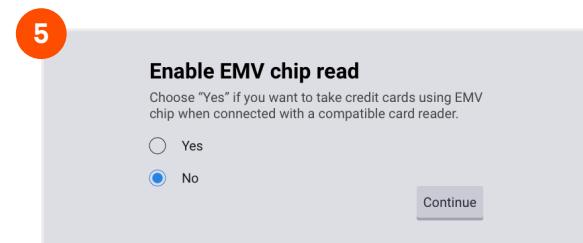

Using the Toast icon in the upper left corner of the screen on your Toast Flex, navigate to the **Setup** menu and select **Device Setup**. Scroll to the **Payment Processing** section and select **EMV Enabled**.

Select **Install Updates**. The update normally takes a few minutes to complete. If you decline the update, you will not be able to use EMV until this update is installed.

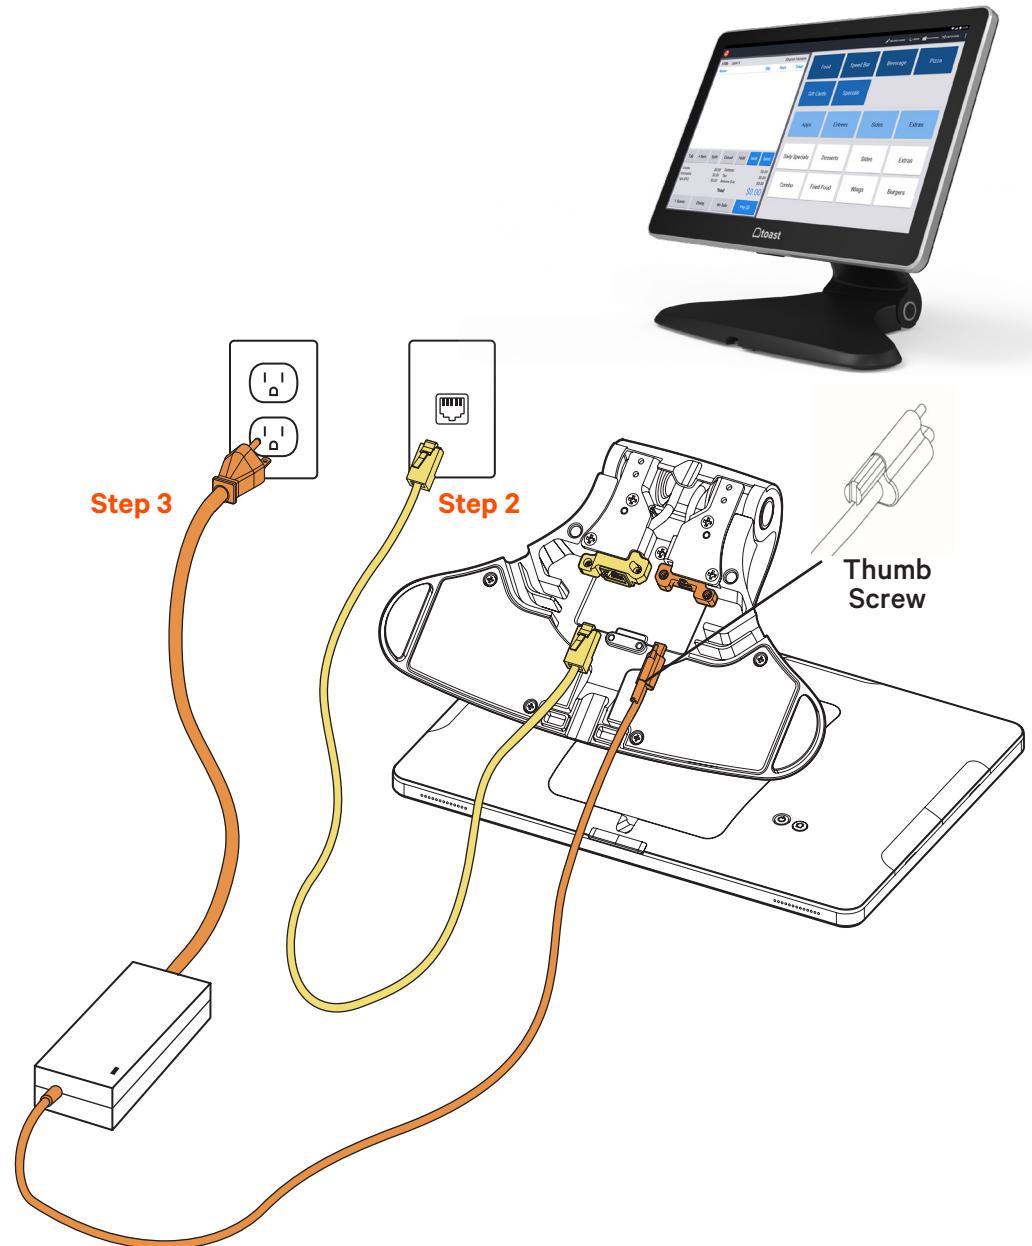

You'll see the screen below as the update processes. If you get an error message, please try again in a few minutes. Make sure to not let your session log out.

If the update was successful, you'll see this next screen. Toggle the switch to Yes, and you're all set!

Toast Flex

- 1 Unpack the Toast Flex terminal and place the terminal on your counter.
- 2 Remove the yellow box labeled “**Connect.**” This box contains two yellow ethernet cables. One cord is 3 ft and one is 7 ft. Choose the cord length that best suits your restaurant and connect it from the wall to the yellow port labeled “**Internet IN**” on the base of the Toast Flex terminal stand.
- 3 Remove the orange power box labeled “**Power.**” Plug in the power cord from the wall into the orange port located at the base of the Toast Flex terminal stand. Use the **thumb screw** to secure it. Ensure the thumbscrew is tight to avoid connectivity issues.
- 4 Set up payment using one of the options below:
 - A If you are attaching your Toast Tap (On-Counter) to the Toast Flex, open the purple box labeled “**Payments.**” This box contains your Toast Tap (On-Counter). Follow the instructions in the printed guide for **Micro USB to Micro USB.**
 - B If you have Toast Tap (Direct Attach to Toast Flex), this will already be adhered to your Toast Flex terminal.

Toast Flex

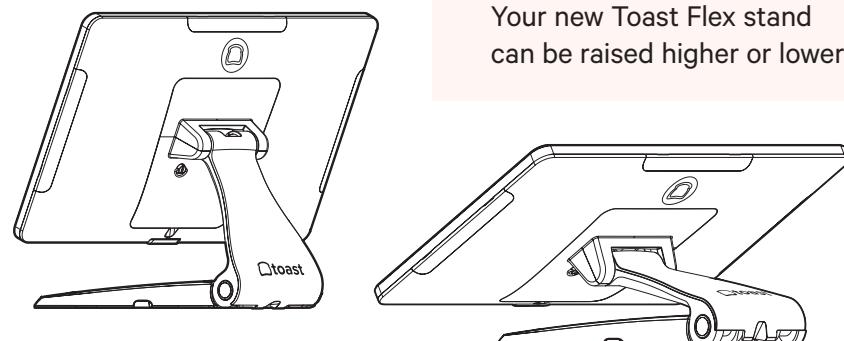

CONTINUED

- 5 Power on the Toast Flex and follow the Toast setup instructions that appear on the screen.
- 6 Log into your restaurant in the Toast App and complete basic setup. Note: You may need to update the Toast App when you open it for the first time.

NOTE

You may need to update the Toast App when you open it for the first time.

Your Toast Flex terminal is set up!

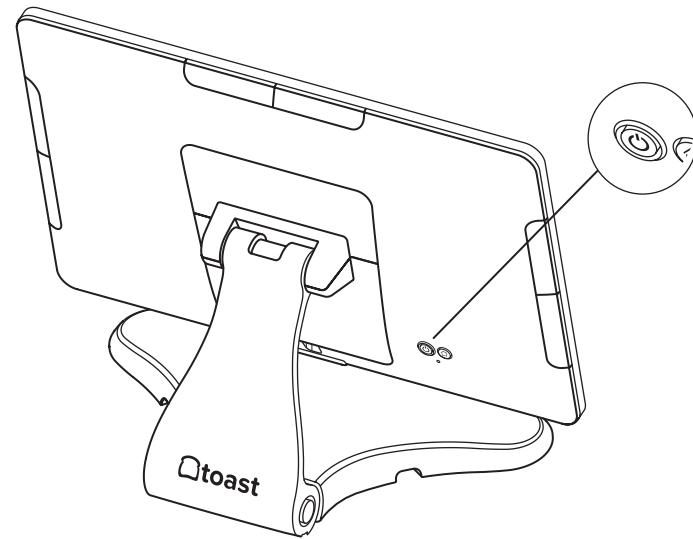

TIP

Your new Toast Flex stand can be raised higher or lower!

Step 5

Power on your Toast Flex

Step 6

Follow Toast setup instructions
