

# WIFI Car DVR

User manual

SP-215

Start Trip of  
Smart Driving

## Preface

Thanks for selecting our WiFi-control product. This device is designed to assist driving via mobile phone. Integrating full HD car DVR with wireless control function, we are trying to provide more thoughtful service to our customers.

Installed in front of the rear view mirror, the 140 degree wide angle lens will work with the best view to record every detail clearly in your trip. Driving records will be stored in memory card. After connecting mobile phone with car DVR's WIFI, you can experience extensive functions such as product setting, real-time preview, video download, etc.

This manual will provide detailed instructions and help you to get the best user experience. Please read carefully before using.

## Function specifying

### WIFI function:

Car DVR will send out WIFI signal. Smartphone will be able to operate car DVR via APP after connecting to WIFI.

### Video segmentation:

To ensure stability, recorded video will be stored as segments in TF card (1/3/5 mins for choice).

## **Loop recording:**

When memory card is full, it is no necessary to delete files manually. Loop recording will cover the early files (SOS files will be not covered).

**Prompt** SOS files will be not covered by loop recording. When memory card is full of SOS files, car DVR will be warning with “DiDi” sounds. You need to open APP and manually format the memory card in car DVR. Formatting will delete all files in memory card, please make sure to save important files, or delete unless SOS files.

## **Parking mode:**

Use APP to open parking mode (default close). After turning off engine, if any shake to car was detected, car DVR will turn on automatically and keep recording for about 30 seconds, and then turn off automatically.

## **Collision detection:**

G-sensor is built in car DVR. If any heavy bumping or emergency breaking happens to the car, the sensor will be triggered. The current video will be locked as a SOS file.

## **Manually locking:**

When driving, if you don't want the current video be covered by loop recording, please press the lock button  in car DVR. The 6 seconds video recording before and after this time will be locked.

## Solutions for common faults

### Can not connect to WIFI

1. Quit APP thoroughly and reopen it. Or press the reset button on car DVR (It is on right side of car DVR. Please press it by a hard thin stick).
2. Try at another place (There maybe interference source around).
3. Check if WIFI has been closed by the button on car DVR.

### Prompt No Memory Card

Please check if memory card has been inserted and works well.

### Can not record

1. Please make sure the memory card has been inseted.
2. When the memory card is inserted at the first time, please format the card by smartphone (Setting-Format memory card).
3. Please check if the memory card has been damaged.

### No image with camera preview

1. Please make sure the smartphone has connected with WIFI.
2. Please make sure the WIFI has been open on car DVR (default open).

### Image on APP is not smooth or can not be displayed

1. Shut down unnecessary APPs running in background.
2. Make smartphone be close to car DVR.
3. Shut down APP and reopen it.

## Car DVR does not open when power on

1. Please check if wire connection is correct.
2. For the car DVR with built-in battery, please twist together the wire ends of red wire and yellow wire, then connect them to ACC. Connect black wire to body shell of car.
3. For the car DVR without built-in battery, connect yellow wire to constant power, connect red wire to ACC, and connect black wire to body shell of car.

**FCC Warning:**

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- o Reorient or relocate the receiving antenna.
- o Increase the separation between the equipment and receiver.
- o Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- o Consult the dealer or an experienced radio/TV technician for help.

Caution: Any changes or modifications to this device not explicitly approved by manufacturer could void your authority to operate this equipment.

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions:  
(1) This device may not cause harmful interference, and  
(2) this device must accept any interference received, including interference that may cause undesired operation.

This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with minimum distance 20cm between the radiator and your body.

This transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.
