# AURGA Viewer
# Quick Start Guide

## Appearance
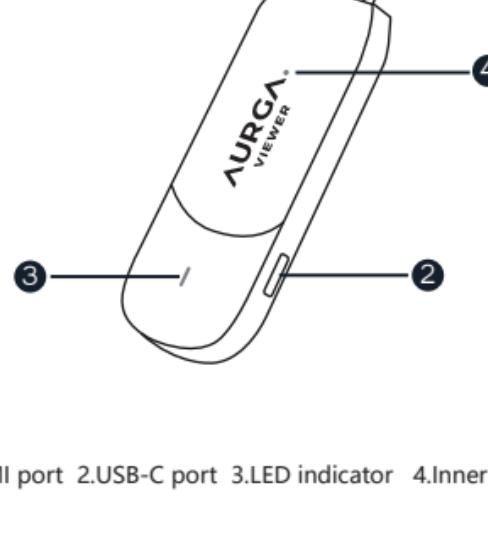

1.HDMI port  2.USB-C port  3.LED indicator  4.Inner RESET button

## Usage

USB-C

Computer/Gaming Console ...
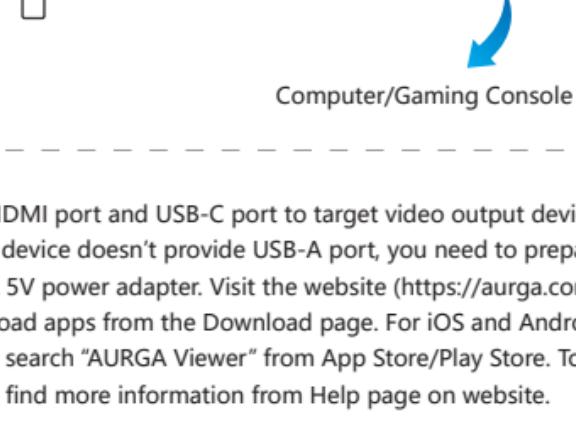

Plug HDMI port and USB-C port to target video output device. If the target device doesn't provide USB-A port, you need to prepare a standard USB-A 5V power adapter. Visit the website (https://aurga.com) and download apps from the Download page. For iOS and Android platform, please search "AURGA Viewer" from App Store/Play Store. To use the apps, please find more information from Help page on website.

## Factory Reset

After booting AURGA Viewer and LED indicator blinks, insert a paper clip into the small hole on the case. Press the inner reset button for 3 seconds and release it. AURGA Viewer will enter factory reset mode and the LED indicator blinks fast, finally it automatically reboots.

## LED Indicator

After AURGA Viewer boots
Blinking RED: Indicates that HDMI port is not plugged or there is no video output from the port.
YELLOW:   Indicates that HDMI port is receiving video signals.
GREEN: Indicates that HDMI port is receiving video signals and app is streaming.
Blinking YELLOW: Indicates that app connects to AURGA Viewer but the HDMI port is not plugged or there is no video output from the port.
