Rev. A 2017-08

Replace the information in the
box with 2D Data Matrix bar
code including production
identifiers (if applicable)
00888499010867

Instructions:

Barcodes for Cardinal Health products need to be generated in GS1-128, GS1 Data Matrix or as UPC-A. Barcode width needs to be a minimum of 3 in. W. If there are space constraints a GS1 DataMatrix can be utilized. **Note:** The bar code must have human readable information below it. (If there is a space constraint, the human readable information may also be located around it, but clearly associated with the bar code.) For shipping cases GS1-128 is the only acceptable format. For Class I devices, the device identifier (DI) is the only information that is required to be encoded in the bar code. For Class II or III devices, a minimum of one Production identifier (PI) must be encoded. Please note in the instructions that Human Readable dates below the bar code are YYMMDD. The date in the USE BY: field is ISO formatted YYYY-MM-DD. Refer to the Cardinal Health UDI Cookbook provided for more information.
