

# **FCC TEST REPORT**

**Test report**

**On Behalf of**

**Anhui Inno-Sign International Co., Ltd**

**For**

**Camping COB Lantern With Power Bank And Wireless Charger**

**Model No.: 92194**

**FCC ID: 2ANFN-92194**

**Prepared for :** Anhui Inno-Sign International Co., Ltd  
Room 1409-1410, Building B, Sky Blue Business Center, No. 188  
South Qianshan Road, Hefei, Anhui, China

**Prepared By :** Shenzhen HUAKE Testing Technology Co., Ltd.  
1F, B2 Building, Junfeng Zhongcheng Zhizao Innovation Park, Fuhai  
Street, Bao'an District, Shenzhen City, China

**Date of Test:** Sep. 25, 2018 to Oct. 10, 2018

**Date of Report:** Oct. 10, 2018

**Report Number:** HK1810101244E

**TEST RESULT CERTIFICATION**

**Applicant's name** ..... : Anhui Inno-Sign International Co., Ltd  
**Address** ..... : Room 1409-1410, Building B, Sky Blue Business Center, No. 188  
South Qianshan Road, Hefei, Anhui, China  
**Manufacture's Name** ..... : Anhui Inno-Sign International Co., Ltd  
**Address** ..... : Room 1409-1410, Building B, Sky Blue Business Center, No. 188  
South Qianshan Road, Hefei, Anhui, China

**Product description**

**Trade Mark:** N/A  
**Product name**..... : Camping COB Lantern With Power Bank And Wireless Charger  
**Model and/or type reference** : 92194  
**Standards** ..... : FCC Rules and Regulations Part 15 Subpart C Section 15.207,  
15.209, 15.203  
ANSI C63.10: 2013

## 1. TEST SUMMARY

### 1.1 TEST PROCEDURES AND RESULTS

| FCC RULES | DESCRIPTION OF TEST | RESULT    |
|-----------|---------------------|-----------|
| §15.203   | Antenna Requirement | Compliant |
| §15.209   | Radiated Emission   | Compliant |
| §15.215   | 20dB bandwidth      | Compliant |
| §15.207   | Conducted Emission  | Compliant |

### 1.2 TEST FACILITY

Test Firm : Shenzhen HUAKE Testing Technology Co., Ltd.

Address : 1F, B2 Building, Junfeng Zhongcheng Zhizao Innovation Park,  
Fuhai Street, Bao'an District, Shenzhen City, China

Designation Number: : CN1229

Test Firm Registration Number : 616276

### 1.3 MEASUREMENT UNCERTAINTY

Measurement Uncertainty

Conducted Emission Expanded Uncertainty = 2.23dB, k=2

Radiated emission expanded uncertainty(9kHz-30MHz) = 3.08dB, k=2

Radiated emission expanded uncertainty(30MHz-1000MHz) = 4.42dB, k=2

Radiated emission expanded uncertainty(Above 1GHz) = 4.06dB, k=2

## 2. GENERAL INFORMATION

### 2.1 GENERAL DESCRIPTION OF EUT

|                               |                                                     |
|-------------------------------|-----------------------------------------------------|
| <b>Operation Frequency</b>    | 123.6KHz                                            |
| <b>Maximum field strength</b> | 58.43dBuV/m(Peak)@3m                                |
| <b>Number of channels</b>     | 1                                                   |
| <b>Antenna Designation</b>    | Integrated Antenna (Met 15.203 Antenna requirement) |
| <b>Hardware Version</b>       | V2.1                                                |
| <b>Software Version</b>       | V1.0                                                |
| <b>Power Supply</b>           | DC5V by adapter or DC 3.7V by Battery               |

## 2.2 OPERATION OF EUT DURING TESTING

| NO.                                                                                                  | TEST MODE DESCRIPTION             |
|------------------------------------------------------------------------------------------------------|-----------------------------------|
| 1                                                                                                    | Wireless charging Mode(Full load) |
| 2                                                                                                    | Wireless charging Mode(half load) |
| 3                                                                                                    | Wireless charging Mode(Null load) |
| Note:<br>1. The mode 1 was the worst case and only the data of the worst case record in this report. |                                   |

## 2.3 DESCRIPTION OF TEST SETUP

Configure :

| Item | Equipment                | Model No. | ID or Specification | Remark  |
|------|--------------------------|-----------|---------------------|---------|
| 1    | Wireless electronic Load | --        | Maximum power 5W    | Support |
| 2    | Adapter                  | CD05      | DC5V                | AE      |

**2.4 MEASUREMENT INSTRUMENTS LIST**

| Item | Equipment                               | Manufacturer    | Model No.           | Serial No. | Last Cal.     | Cal. Interval |

### 3. RADIATED EMISSION

#### 3.1 TEST LIMIT

Standard FCC 15.209

| Frequency<br>(MHz) | Distance<br>Meters | Field Strengths Limit                                                                                 |                                   |
|--------------------|--------------------|-------------------------------------------------------------------------------------------------------|-----------------------------------|
|                    |                    | $\mu\text{V}/\text{m}$                                                                                | $\text{dB}(\mu\text{V})/\text{m}$ |
| 0.009 ~ 0.490      | 300                | $2400/F(\text{kHz})$                                                                                  | ---                               |
| 0.490 ~ 1.705      | 30                 | $24000/F(\text{kHz})$                                                                                 | ---                               |
| 1.705 ~ 30         | 30                 | 30                                                                                                    | ---                               |
| 30 ~ 88            | 3                  | 100                                                                                                   | 40.0                              |
| 88 ~ 216           | 3                  | 150                                                                                                   | 43.5                              |
| 216 ~ 960          | 3                  | 200                                                                                                   | 46.0                              |
| 960 ~ 1000         | 3                  | 500                                                                                                   | 54.0                              |
| Above 1000         | 3                  | Other: 74.0 $\text{dB}(\mu\text{V})/\text{m}$ (Peak) 54.0 $\text{dB}(\mu\text{V})/\text{m}$ (Average) |                                   |

Remark:

- (1) Emission level  $\text{dB}\mu\text{V} = 20 \log$  Emission level  $\mu\text{V}/\text{m}$
- (2) The smaller limit shall apply at the cross point between two frequency bands.
- (3) Distance is the distance in meters between the measuring instrument, antenna and the closest point of any part of the device or system.

### 3.2. MEASUREMENT PROCEDURE

1. The EUT was placed on the top of the turntable 0.8 or 1.5 meter above ground. The phase center of the receiving antenna mounted on the top of a height-variable antenna tower was placed 3 meters far away from the turntable.
2. Power on the EUT and all the supporting units. The turntable was rotated by 360 degrees to determine the position of the highest radiation.
3. The height of the broadband receiving antenna was varied between one meter and four meters above ground to find the maximum emissions field strength of both horizontal and vertical polarization.
4. For each suspected emissions, the antenna tower was scan (from 1 M to 4 M) and then the turntable was rotated (from 0 degree to 360 degrees) to find the maximum reading.
5. Set the test-receiver system to Peak or CISPR quasi-peak Detect Function with specified bandwidth under Maximum Hold Mode.
6. In case the emission is lower than 30MHz, loop antenna has to be used for measurement and the recorded data should be QP measured by receiver. High - Low scan is not required in this case.

The following table is the setting of spectrum analyzer and receiver.

| Spectrum Parameter    | Setting                        |
|-----------------------|--------------------------------|
| Start ~Stop Frequency | 9KHz~150KHz/RB 200Hz for QP    |
| Start ~Stop Frequency | 150KHz~30MHz/RB 9KHz for QP    |
| Start ~Stop Frequency | 30MHz~1000MHz/RB 120KHz for QP |

  

| Receiver Parameter    | Setting                        |
|-----------------------|--------------------------------|
| Start ~Stop Frequency | 9KHz~150KHz/RB 200Hz for QP    |
| Start ~Stop Frequency | 150KHz~30MHz/RB 9KHz for QP    |
| Start ~Stop Frequency | 30MHz~1000MHz/RB 120KHz for QP |

### 3.3. TEST SETUP

#### Radiated Emission Test-Setup Frequency Below 30MHz

#### RADIATED EMISSION TEST SETUP 30MHz-1000MHz

**3.4. TEST RESULT****RADIATED EMISSION BELOW 30MHZ**

| Frequency<br>MHz | Polarization | Reading<br>dB(uV) | Factor<br>dB<br>(1/m) | Level<br>dB(uV/m)<br>Peak | Limit<br>dB(uV/m)<br>Average | Margin<br>dB | Pass/Fail |
|------------------|--------------|-------------------|-----------------------|---------------------------|------------------------------|--------------|-----------|
| 0.1236           | Face         | 48.03             | 10.4                  | 58.43                     | 105.76                       | 47.33        | Pass      |
| 0.1236           | Side         | 37.69             | 10.4                  | 48.09                     | 105.76                       | 57.67        | Pass      |

Note: No other emissions found between lowest internal used/generated frequencies to 30MHz. The peak level of the emission is less than the average limit, so the average level shall be less than the limit without test.

## RESULT: PASS

### Note:

Factor=Antenna Factor + Cable loss, Margin=Result-Limit.

The "Factor" value can be calculated automatically by software of measurement system.

The mode 1 which operate with maximum output power was the worst case and only the data of the worst case record in this report.

#### 4. 20DB BANDWIDTH

##### 4.1. MEASUREMENT PROCEDURE

1. The EUT was placed on the top of the turntable 0.8 meter above ground. The phase center of the receiving antenna mounted on the top of a height-variable antenna tower was placed 3 meters far away from the turntable.
2. Set the EUT Work on operation frequency.
3. Set Span = approximately 2 to 5 times the 20 dB bandwidth, centered on a channel  
The nominal IF filter bandwidth (3 dB RBW) shall be in the range of 1% to 5% of the OBW and video bandwidth (VBW) shall be approximately three times RBW; Sweep = auto; Detector function = peak
4. Set SPA Trace 1 Max hold, then View.

##### 4.2. TEST SET-UP (BLOCK DIAGRAM OF CONFIGURATION)

## 5. FCC LINE CONDUCTED EMISSION TEST

### 5.1. LIMITS OF LINE CONDUCTED EMISSION TEST

| Frequency     | Maximum RF Line Voltage |                |
|---------------|-------------------------|----------------|
|               | Q.P.( dBuV)             | Average( dBuV) |
| 150kHz~500kHz | 66-56                   | 56-46          |
| 500kHz~5MHz   | 56                      | 46             |
| 5MHz~30MHz    | 60                      | 50             |

Note:

1. The lower limit shall apply at the transition frequency.
2. The limit decreases linearly with the logarithm of the frequency in the range 0.15 MHz to 0.50MHz.

### 5.2. BLOCK DIAGRAM OF LINE CONDUCTED EMISSION TEST

### 5.3. PRELIMINARY PROCEDURE OF LINE CONDUCTED EMISSION TEST

1. The equipment was set up as per the test configuration to simulate typical actual usage per the user's manual. When the EUT is a tabletop system, a wooden table with a height of 0.8 meters is used and is placed on the ground plane as per ANSI C63.10 (see Test Facility for the dimensions of the ground plane used). When the EUT is a floor-standing equipment, it is placed on the ground plane which has a 3-12 mm non-conductive covering to insulate the EUT from the ground plane.
2. Support equipment, if needed, was placed as per ANSI C63.10.
3. All I/O cables were positioned to simulate typical actual usage as per ANSI C63.10.
4. All support equipments received AC120V/60Hz power from a LISN, if any.
5. The EUT received charging voltage by adapter which received 120V/60Hz power by a LISN..
6. The test program was started. Emissions were measured on each current carrying line of the EUT using a spectrum Analyzer / Receiver connected to the LISN powering the EUT. The LISN has two monitoring points: Line 1 (Hot Side) and Line 2 (Neutral Side). Two scans were taken: one with Line 1 connected to Analyzer / Receiver and Line 2 connected to a 50 ohm load; the second scan had Line 1 connected to a 50 ohm load and Line 2 connected to the Analyzer / Receiver.
7. Analyzer / Receiver scanned from 150 kHz to 30MHz for emissions in each of the test modes.
8. During the above scans, the emissions were maximized by cable manipulation.
9. The test mode(s) were scanned during the preliminary test.

Then, the EUT configuration and cable configuration of the above highest emission level were recorded for reference of final testing.

### 5.4. FINAL PROCEDURE OF LINE CONDUCTED EMISSION TEST

1. EUT and support equipment was set up on the test bench as per step 2 of the preliminary test.
2. A scan was taken on both power lines, Line 1 and Line 2, recording at least the six highest emissions. Emission frequency and amplitude were recorded into a computer in which correction factors were used to calculate the emission level and compare reading to the applicable limit. If EUT emission level was less -2dB to the A.V. limit in Peak mode, then the emission signal was re-checked using Q.P and Average detector.
3. The test data of the worst case condition(s) was reported on the Summary Data page.
