

KE2 Connect

TEST REPORT FOR

Edge Manager
Model: 21596

Tested to The Following Standards:

FCC Part 15 Subpart C Section(s)

15.207 & 15.247
(DTS 2400-2483.5 MHz)

Report No.: 99529-5

Date of issue: October 30, 2017

This test report bears the accreditation symbol indicating that the testing performed herein meets the test and reporting requirements of ISO/IEC 17025 under the applicable scope of EMC testing for CKC Laboratories, Inc.

We strive to create long-term, trust based relationships by providing sound, adaptive, customer first testing services. We embrace each of our customers' unique EMC challenges, not as an interruption to set processes, but rather as the reason we are in business.

This report contains a total of 49 pages and may be reproduced in full only. Partial reproduction may only be done with the written consent of CKC Laboratories, Inc.

ADMINISTRATIVE INFORMATION

Test Report Information

REPORT PREPARED FOR:

KE2 Connect
12 Chamber Drive
Washington, MO 63090

Representative: Steve Roberts

REPORT PREPARED BY:

Dianne Dudley
CKC Laboratories, Inc.
5046 Sierra Pines Drive
Mariposa, CA 95338

Project Number: 99529

DATE OF EQUIPMENT RECEIPT:

October 23, 2017

DATE(S) OF TESTING:

October 23, 2017

Report Authorization

The test data contained in this report documents the observed testing parameters pertaining to and are relevant for only the sample equipment tested in the agreed upon operational mode(s) and configuration(s) as identified herein. Compliance assessment remains the client's responsibility. This report may not be used to claim product endorsement by A2LA or any government agencies. This test report has been authorized for release under quality control from CKC Laboratories, Inc.

Steve Behm
Director of Quality Assurance & Engineering Services
CKC Laboratories, Inc.

Test Facility Information

Our laboratories are configured to effectively test a wide variety of product types. CKC utilizes first class test equipment, anechoic chambers, data acquisition and information services to create accurate, repeatable and affordable test results.

TEST LOCATION(S):
CKC Laboratories, Inc.
110 Olinda Place
Brea, CA 92823

Software Versions

| CKC Laboratories Proprietary Software | Version |
|---------------------------------------|---------|
| EMITest Emissions | 5.03.11 |

Site Registration & Accreditation Information

| Location | NIST CB # | TAIWAN | CANADA | FCC | JAPAN |
|------------|-----------|----------------|---------|--------|--------|
| Brea A, CA | US0060 | SL2-IN-E-1146R | 3082D-1 | US1025 | A-0147 |

SUMMARY OF RESULTS

Standard / Specification: FCC Part 15 Subpart C - 15.247 (DTS)

| Test Procedure | Description | Modifications | Results |
|----------------|------------------------------------|---------------|---------|
| 15.247(a)(2) | 6dB Bandwidth | NA | NP |
| 15.247(b)(3) | Output Power | NA | NP |
| 15.247(e) | Power Spectral Density | NA | NP |
| 15.247(d) | RF Conducted Emissions & Band Edge | NA | NP |
| 15.247(d) | Radiated Emissions & Band Edge | NA | PASS |
| 15.207 | AC Conducted Emissions | NA | PASS |

NA = Not Applicable

NP = CKC Laboratories was not contracted to perform test.

Modifications During Testing

This list is a summary of the modifications made to the equipment during testing.

Summary of Conditions

No modifications were made during testing.

Modifications listed above must be incorporated into all production units.

Conditions During Testing

This list is a summary of the conditions noted to the equipment during testing.

Summary of Conditions

None

EQUIPMENT UNDER TEST (EUT)

CKC Laboratories tested Device/Model: **Device: SmartEdge Portable Access Point, Model: KE2 Connect**

Since the time of testing, the manufacturer has chosen to update the device and model names to:

Device: Edge Manager, Model: 21596. Any difference between the names does not affect their EMC characteristics and therefore meets the level of testing equivalent to the tested device/model.

During testing, numerous configurations may have been utilized. The configurations listed below support compliance to the standard(s) listed in the Summary of Results section.

Configuration 1

Equipment Tested:

| Device | Manufacturer | Model # | S/N |
|--------------------|--------------|--------------|-----|
| 5V DC Power Supply | CUI Inc | SW15-5-N-138 | NA |
| Edge Manager | KE2 Connect | 21596 | NA |

Support Equipment:

| Device | Manufacturer | Model # | S/N |
|--------|--------------|----------|-----|
| Laptop | Lenovo | Thinkpad | NA |

General Product Information:

| Product Information | Manufacturer-Provided Details |
|------------------------------------|--|
| Equipment Type: | Stand-Alone Equipment |
| Type of Wideband System: | 802.11b/g/n20/n40 |
| Operating Frequency Range: | 802.11b/g/n20 2412-2462MHz 802.11n40 2426-2452MHz |
| Modulation Type(s): | CCK,OFDM |
| Maximum Duty Cycle: | 99% |
| Number of TX Chains: | 2 |
| Antenna Type(s) and Gain: | External 2dBi |
| Beamforming Type: | NA |
| Antenna Connection Type: | External Connector |
| Nominal Input Voltage: | 5Vdc |
| Firmware / Software used for Test: | Atheros Radio test (ART2-GUI) version 2.3 |

FCC Part 15 Subpart C

15.247(d) Radiated Emissions & Band Edge

Test Setup/Conditions

| | | | |
|----------------|--------------------------------|----------------|------------|
| Test Location: | Brea Lab A | Test Engineer: | E. Wong |
| Test Method: | ANSI C63.10 (2013), KDB 558074 | Test Date(s): | 10/23/2017 |
| Configuration: | 1 | | |

See data sheets for test setup and test equipment.

Test Setup / Conditions / Data

Test Location: CKC Laboratories, Inc • 110 N. Olinda Place • Brea, CA 92821 • 714 993 6112
 Customer: **KE2 Connect**
 Specification: **15.247(d) / 15.209 Radiated Spurious Emissions**
 Work Order #: **99529** Date: 10/23/2017
 Test Type: **Radiated Scan** Time: 14:03:41
 Tested By: E. Wong Sequence#: 4
 Software: EMITest 5.03.11

Equipment Tested:

| Device | Manufacturer | Model # | S/N |
|-----------------|--------------|---------|-----|
| Configuration 1 | | | |

Support Equipment:

| Device | Manufacturer | Model # | S/N |
|-----------------|--------------|---------|-----|
| Configuration 1 | | | |

Test Conditions / Notes:

The EUT seeking PCII equipment authorization is placed on a Styrofoam block. Antennas set in vertical position as intended.

WAN, USB, RS485 are connected to section of cable.

LAN is connected to remote laptop for configuration of continuous transmit test mode.

Changes from original certification:

Depopulation of 5745-5825MHz radio.

Metal enclosure and two external antennae.

Antenna gain 2 dBi.

802.11 b/g/n20/

Freq 2412-2462MHz

802.11 n40

Freq 2422-2452MHz

Tx Freq

802.11 b/g/n20/

2412MHz, 2437MHz, 2462MHz

802.11 n40

2422MHz, 2437MHz, 2452MHz

Note: The software setting on support laptop is adjusted by 10MHz to set the measured center frequency.

Test software setting

Max TX power set: to match original testing.

802.11b : 18.0

802.11g: 15.0

802.11n20: 14.5

802.11n40: 14.5, 14.0

Gain set : not selected.

802.11b/g transmit one channel at a time, presented as 0 x 1, 0 x 2 .

802.11n20/ n20 transmit simultaneously

Frequency range of measurement = 1-18GHz base on preliminary test data.

1000 MHz-18000 MHz; RBW=1 MHz, VBW=1 MHz.

Test environment conditions: 24°C, 55 % Relative Humidity, 100kPa

Evaluation for PC II.

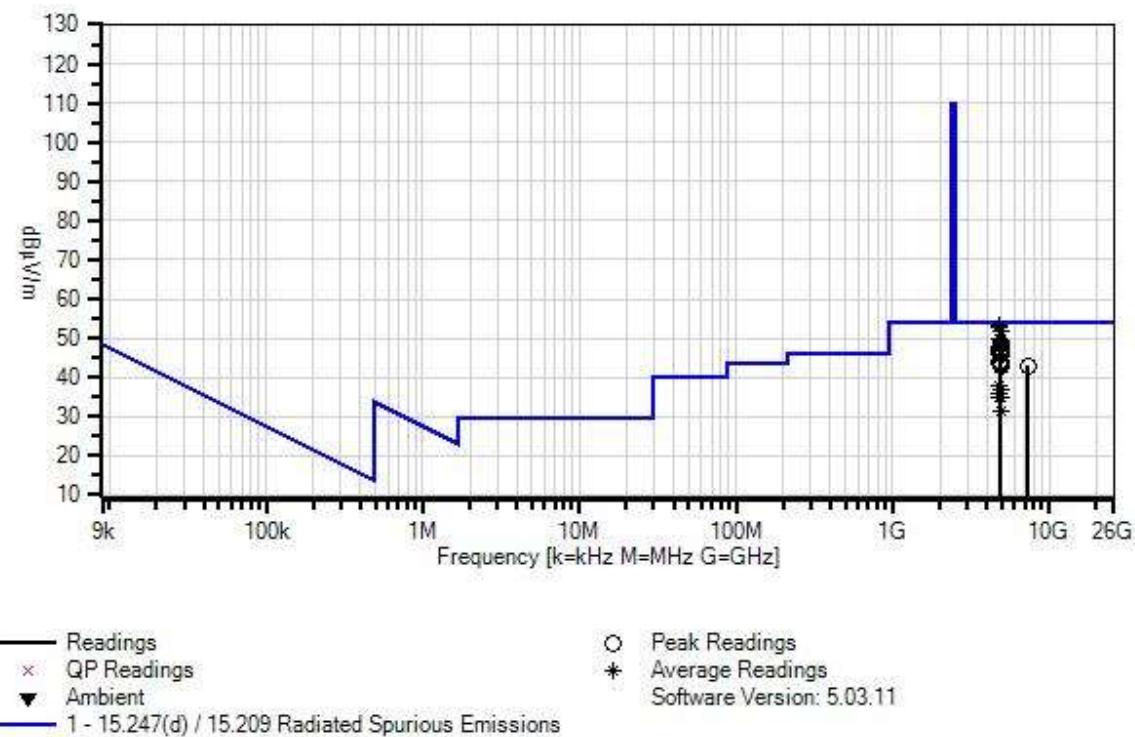

Site A

ANSI C63.10-2013

Emission profile of the EUT rotated along three orthogonal axis was investigated. Recorded data represent worse case emission, no Emission found beyond second harmonics.

All data rates / modulation types were evaluated during preliminary investigation. The test data represents worst case emissions for the investigated operational modes.

Test Setup / Conditions / Data

Test Location: CKC Laboratories, Inc • 110 N. Olinda Place • Brea, CA 92821 • 714 993 6112
 Customer: KE2 Connect
 Specification: 15.247(d) / 15.209 Radiated Spurious Emissions_non restricted band -30dBc
 Work Order #: 99529 Date: 10/23/2017
 Test Type: Radiated Scan Time: 19:53:29
 Tested By: E. Wong Sequence#: 5
 Software: EMITest 5.03.11

Equipment Tested:

| Device | Manufacturer | Model # | S/N |
|-----------------|--------------|---------|-----|
| Configuration 1 | | | |

Support Equipment:

| Device | Manufacturer | Model # | S/N |
|-----------------|--------------|---------|-----|
| Configuration 1 | | | |

Test Conditions / Notes:

The EUT seeking PCII equipment authorization is placed on a Styrofoam block. Antennas set in vertical position as intended.

WAN, USB, RS485 are connected to section of cable.

LAN is connected to remote laptop for configuration of continuous transmit test mode.

Changes from original certification:

Depopulation of 5745-5825MHz radio.

Metal enclosure and two external antennae.

Antenna gain 2 dBi.

802.11 b/g/n20/

Freq 2412-2462MHz

802.11 n40

Freq 2422-2452MHz

Tx Freq

802.11 b/g/n20/

2412MHz, 2437MHz, 2462MHz

802.11 n40

2422MHz, 2437MHz, 2452MHz

Note: The software setting on support laptop is adjusted by 10MHz to set the measured center frequency.

Test software setting

Max TX power set: to match original testing.

802.11b: 18.0

802.11g: 15

802.11n20: 14.5

802.11n40: 14.5, 14.0

Gain set: not selected.

802.11b/g transmit one channel at a time, presented as 0 x 1, 0 x 2 .

802.11n20/ n20 transmit simultaneously

Frequency range of measurement = Fundamental
 2000 MHz-3000 MHz; RBW=1 MHz, VBW=1 MHz.
 Test environment conditions: 24°C, 55 % Relative Humidity, 100kPa

Evaluation for PC II.

Site A

ANSI C63.10-2013

Emission profile of the EUT rotated along three orthogonal axis was investigated. Recorded data represent worse case emission, no Emission found beyond second harmonics.

All data rates / modulation types were evaluated during preliminary investigation. The test data represents worst case emissions for the investigated operational modes.

This data sheet is for worst case bandedge at 2400 MHz, -30dBc in 100kHz.bandwidth

SUPPLEMENTAL INFORMATION

Measurement Uncertainty

| Uncertainty Value | Parameter |
|-------------------|---------------------------|
| 4.73 dB | Radiated Emissions |
| 3.34 dB | Mains Conducted Emissions |
| 3.30 dB | Disturbance Power |

Uncertainties reported are worst case for all CKC Laboratories' sites and represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k=2. Compliance is deemed to occur provided measurements are below the specified limits.

Emissions Test Details

TESTING PARAMETERS

Unless otherwise indicated, the following configuration parameters are used for equipment setup: The cables were routed consistent with the typical application by varying the configuration of the test sample. Interface cables were connected to the available ports of the test unit. The effect of varying the position of the cables was investigated to find the configuration that produced maximum emissions. Cables were of the type and length specified in the individual requirements. The length of cable that produced maximum emissions was selected.

The equipment under test (EUT) was set up in a manner that represented its normal use, as shown in the setup photographs. Any special conditions required for the EUT to operate normally are identified in the comments that accompany the emissions tables.

The emissions data was taken with a spectrum analyzer or receiver. Incorporating the applicable correction factors for distance, antenna, cable loss and amplifier gain, the data was reduced as shown in the table below. The corrected data was then compared to the applicable emission limits. Preliminary and final measurements were taken in order to ensure that all emissions from the EUT were found and maximized.

CORRECTION FACTORS

The basic spectrum analyzer reading was converted using correction factors as shown in the highest emissions readings in the tables. For radiated emissions in dB μ V/m, the spectrum analyzer reading in dB μ V was corrected by using the following formula. This reading was then compared to the applicable specification limit. Individual measurements were compared with the displayed limit value in the margin column. The margin was calculated based on subtracting the limit value from the corrected measurement value; a positive margin represents a measurement exceeding the limit, while a negative margin represents a measurement less than the limit.

| SAMPLE CALCULATIONS | |
|-----------------------|----------------|
| Meter reading | (dB μ V) |
| + Antenna Factor | (dB/m) |
| + Cable Loss | (dB) |
| - Distance Correction | (dB) |
| - Preamplifier Gain | (dB) |
| = Corrected Reading | (dB μ V/m) |

TEST INSTRUMENTATION AND ANALYZER SETTINGS

The test instrumentation and equipment listed were used to collect the emissions data. A spectrum analyzer or receiver was used for all measurements. Unless otherwise specified, the following table shows the measuring equipment bandwidth settings that were used in designated frequency bands. For testing emissions, an appropriate reference level and a vertical scale size of 10 dB per division were used.

| MEASURING EQUIPMENT BANDWIDTH SETTINGS PER FREQUENCY RANGE | | | |
|--|---------------------|------------------|-------------------|
| TEST | BEGINNING FREQUENCY | ENDING FREQUENCY | BANDWIDTH SETTING |
| CONDUCTED EMISSIONS | 150 kHz | 30 MHz | 9 kHz |
| RADIATED EMISSIONS | 9 kHz | 150 kHz | 200 Hz |
| RADIATED EMISSIONS | 150 kHz | 30 MHz | 9 kHz |
| RADIATED EMISSIONS | 30 MHz | 1000 MHz | 120 kHz |
| RADIATED EMISSIONS | 1000 MHz | >1 GHz | 1 MHz |

SPECTRUM ANALYZER/RECEIVER DETECTOR FUNCTIONS

The notes that accompany the measurements contained in the emissions tables indicate the type of detector function used to obtain the given readings. Unless otherwise noted, all readings were made in the "positive peak" detector mode. Whenever a "quasi-peak" or "average" reading was recorded, the measurement was annotated with a "QP" or an "Ave" on the appropriate rows of the data sheets. In cases where quasi-peak or average limits were employed and data exists for multiple measurement types for the same frequency then the peak measurement was retained in the report for reference, however the numbering for the affected row was removed and an arrow or caret ("^") was placed in the far left-hand column indicating that the row above takes precedence for comparison to the limit. The following paragraphs describe in more detail the detector functions and when they were used to obtain the emissions data.

Peak

In this mode, the spectrum analyzer or receiver recorded all emissions at their peak value as the frequency band selected was scanned. By combining this function with another feature called "peak hold," the measurement device had the ability to measure intermittent or low duty cycle transient emission peak levels. In this mode the measuring device made a slow scan across the frequency band selected and measured the peak emission value found at each frequency across the band.

Quasi-Peak

Quasi-peak measurements were taken using the quasi-peak detector when the true peak values exceeded or were within 2 dB of a quasi-peak specification limit. Additional QP measurements may have been taken at the discretion of the operator.

Average

Average measurements were taken using the average detector when the true peak values exceeded or were within 2 dB of an average specification limit. Additional average measurements may have been taken at the discretion of the operator. If the specification or test procedure requires trace averaging, then the averaging was performed using 100 samples or as required by the specification. All other average measurements are performed using video bandwidth averaging. To make these measurements, the test engineer reduces the video bandwidth on the measuring device until the modulation of the signal is filtered out. At this point, the measuring device is set into the linear mode and the scan time is reduced.
