

AKTV8

Intelligence In Motion

Details of Changes Made to the Product

The originally certified product (hardware version v1.7.3) is being updated (to new hardware version v1.7.4.1) by (1) removal of two test vias in the RF traces and (2) the addition of copper pads and a pull up resistor for future compressor control (digital circuitry). To remain compliant, the transmit power setting in the sample has been decreased to the next lower setting. The product labeling including model name (Model/HVIN: iAir3) remains the same.
