

Standalone SAR test exclusion considerations(BLE)

June 27, 2018

- Device category = Portable device Mobile device
- Transmitting mode = Single Transmitting Simultaneous Transmitting
- Max. transmitting frequency = 2480 MHz
- Min. test separation distance = 5 mm
- Max. Antenna Gain = 0.89 dBi
- Max. power with turn-up tolerance = 2.50 dBm = 1.78 mW (Typical Power = Range: 1.50 dBm \pm 1.00 dB)

Note. For Max.tune-up power, please refer to the operation description.

KDB 447498 D01 clasue 4.3.1 Step 1) SAR test exclusion thresholds for 100MHz to 6GHz at test separationn distances \leq 50 mm

[(max. power of channel, including tune-up tolerance, mW) / (min. test separation distance, mm)] \cdot [$\sqrt{f(\text{GHz})}$] \leq 3.0 for 1g SAR and \leq 7.5 for 10g extremity SAR
 $= [(1.78\text{mW} / 5\text{mm})] \times [\sqrt{2.48\text{GHz}}] = 0.56$

Note. The calculation result was rounded to one decimal place for comparison.

→ SAR evaluation for general population exposure conditions by measurement or numerical simulation is not required.
