[Main Functions Introduction]

1. Driving Video (DVR)

- Insert the TF card into car dvr, and then turn on dvr, it will automatically start the front and rear camera video recording.
- You could click the "Driving Video" on main menu or click the dvr float mini window (If you choose "show Float button") to enter the driving video recording menu as below (Image 4):

Image 4: Driving video recording menu

- DVR support Picture in Picture display (Dual camera), Front Cam display, Rear Cam display; and support time watermark.
- For power energy saving, the dvr preview screen will exit periodically (You could set up the "Auto Exit Preview" time in dvr settings) .
- G-Sensor: it will automatically lock the 10 seconds video files before and after the car collision happened during video recording. You could set up the G-Sensor sensitivity (High--Normal--Low). The locked video files will not be automatically overwritten by Loop recording function in certain time. But if the memory card is almost full, the systems will also start to overwrite the first locked video files and then keep video record. (If no TF card inside, this function don't work)

Remarks: Please backup the important video/image files in time to prevent it from files accidental damage or to be automatically overwritten by systems.

- Parking Monitor: if you turn on the parking monitor function, when the dvr at sleep parking mode, the systems will automatically wake up and start to record 30 seconds video files if collision occurs. After 30s video recording, the dvr will automatically sleep again to save the power. (If the power is not enough or no TF card inside, this function don't work)
- Auto Reverse Parking: when get the car in reverse gear, the car dvr will automatically switch to the rear camera image with parking line preview (Image 5). After parking signal disappear, the rear camera preview will automatically exit and back to previous preview mode.

Image 5: Auto Reverse Parking

- Front camera video resolution: High (1080P) or Normal (720P)
- Mute record: when dvr make the video recording, you could choose record the voice or not
- Video files playback: there are 2 ways to check and playback the current video files:

a) Enter "Driving Video" menu, and then click this button  will enter the video files list as below (Image 6):

you could select the video files by time or by camera to playback it, also you could delete the video files you want.

- Click one video file to playback, even if it will show dvr whole record duration, but it just will start the video to play by specified time you selected.

Image 6: Playback View List

- b) Click the “Apps” apps button to enter the Apps list menu, and then click  car player button to play the video you want. Here you could choose Front camera or Back Camera video to playback as below (Image 7):

Plus, you could slide touch the specific area to adjust the brightness/volume, or fast-forward/rewind the video files (as orange color arrow):

Image 7: DVR car player

2. GPS Navigation

Click the GPS button will enter the default GPS Navigation Map (current default Navigation is Google Maps as like below image 8):

Of course, you could set up other GPS Map as the default navigation from the list. For example "Navitel", "Waze".

How to set-up the other default GPS Map as you like? (image 9)

- Firstly, press the "GPS" button for 2-3 seconds, dvr will popup the choice option for GPS default settings.
- And then click the Map option you want, it will set up the default GPS Navigation Map for this dvr. When you enter again the GPS menu, it will be GPS you choosed.

Image 9: GPS navigation list for choice

3. Bluetooth Hands-free Function

Click Bluetooth shortcut to enter Bluetooth hands-free menu list (Image: 10)

Open the smartphone bluetooth setting and find the car dvr Bluetooth named “cm84”, pair them , then your phone contact list will be synchronized into this dvr automatically.

Image 10: Bluetooth Hands-free Menu

5. Multimedia Entertainment

- Click  music player button will enter Music player interface, you will play your favoritesongs.
- If you want to play the video ,please click  car player to play the video files; if you want to check the photo, please enter  gallery button.

- Or, you could check all the files from  "File manager", include internal storage and external micro sd card files.

➤ **For safe driving, please don't check the video or photo when you are driving. Thank you.**

6. Settings

- **Setting** (Image 12): include Volume/Brightness/Auto Scan BT keyboard/ 3G Mobile Network Status/ SoftAP/WLAN/DVR Setting:

Turn ON/OFF
the 3G network

Image 12: Settings interface

Image 13: DVR camera settings

● **Other:**

- a. Auto Sleep: you could set up the dvr automatically enter standby status time after the car stop: 15 mins/ 30 mins/ 60 mins/Never auto sleep
 - Suggest to choose 15 mins as the auto sleep time after car engine off, to ensure the car battery will not run out of electricity if when the dvr does not enter sleep mode.
- b. Enable Wake Up by Collision: when the car collision happened, the car dvr will automatically wake up and start to record 30 seconds video files.
- c. Allow Video Lock: this is based on dvr G-Sensor function. If choose turn on this function, the collision video will save to special Lock folder.
- d. Collision Detection Sensitivity: Low/Normal/High. Usually normal is good choice.
- e. Factory data reset: it will erase all the data you set up and download, will recover to the factory default settings.
- f. More: click it will enter the android normal settings, include WIF/SIM Cards/Display/Storage/Apps/Language&Input/Date&Time/AboutDevice/Bluetooth/Data usage and ect settings up.
- g. Systems updates: our company support systems updates. If you want, please contact us for newer systems updates.
- h. Version: DVR current version information.

Click "More"
will enter
Android

Image 13: Other settings list

Click "More" button will enter the android settings as our normal android device, please check below image 14:

Image 14: Android normal settings

- **Storage:** it will display the external sd card/DVR internal storage information;
Also, you could enter Files Management menu list or Format SD card here.

Image 15: Storage settings

- **For safe driving, please don't check the video or photo when you are driving. Thank you.**
- **When dvr recording become slow or bad effect, please try the format SD card.**

- **CarAssist** (Null, please ignore it)

FCC Warning

This device complies with part 15 of the FCC rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

NOTE: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

Radiation Exposure Statement

This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with minimum distance 20cm between the radiator and your body.
