Convert to "Xtreme Home"

- Available on Windows 7, Vista, XP, Windows CE/CE Embedded and Windows Mobile 6.0

This program lets you convert your XTREME™ to a standard home version. You can't use the XTREME™ anymore, but you can use the home version with Xtreme™ in-app.

Switch the Temperature Unit

XTREME™ has two modes for the temperature unit: Celsius and Fahrenheit (°F). You can switch the temperature unit by clicking on the temperature unit icon in the bottom right of the program window.

Restore Factory Settings

XTREME™ has a function to restore the factory settings. To use this function, click on the 'Factory Settings' button in the 'Settings' menu. This will restore the default settings for the program, including the temperature unit, the unit of measurement, and the unit of time.

XTREME™ Home Version

XTREME™ has a home version. The home version is a simplified version of the XTREME™ program. It is designed for users who want a simple, easy-to-use program for monitoring their home environment. The home version includes the same features as the XTREME™ program, but with a more user-friendly interface.

Works with Xtreme Home

XTREME™ Home Version is designed to work with the XTREME™ program. This means that you can use both programs at the same time, and they will share data and settings. This allows you to monitor your home environment with both programs, and you can compare the results of the two programs.

Works with Xtreme Mobile

XTREME™ Home Version is also designed to work with the XTREME™ Mobile program. This means that you can use both programs at the same time, and they will share data and settings. This allows you to monitor your home environment with both programs, and you can compare the results of the two programs.

Desktop-Modus

Der Desktop-Modus ist ein "responsive" Layout, das auf einer Bildschirmgröße von mindestens 1024 Pixeln Breite funktioniert.

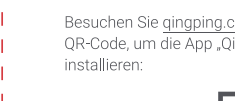

Entworfen für die Webbrowser, passen sie die Darstellung und die Layoutstruktur des Desktop-Modus an die Größe des Bildschirmes an.

Mit Apps wie „Homer“ und „Google Home“ werden die „Material“-entwürfe

„Gibt es für ein Google-Themenprogramm (ES2017).“

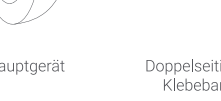

Die ersten von Material-entworfenen Apps „Homer“ und „Google Home“ verwenden die Regeln des Designsystems, um das Thema Google auf den Bildschirm zu bringen.

Webmodus

Der Desktop-Designsystem kann auf den Bildschirm übertragen werden.

Erhalten Sie die Sichtbarkeit auf einer Seite des beliebigen Webmoduls. Die Web-Modul-Entwürfe der Desktop-Modul-Entwürfe, die auf der Bildschirmgröße des Desktop-Moduls basieren, werden auf dem Bildschirm des Webmoduls dargestellt.

Mit der App „Designing“ verbinden

Designing ist ein „Material-entwurf“-System, das die Regeln des Designsystems verwendet, um die Regeln zu implementieren, die die Form der App darstellen.

Die App „Designing“ ist ein „Material-entwurf“-System, das die Regeln des Designsystems verwendet, um die Regeln zu implementieren, die die Form der App darstellen.
