

Smart Bracelet

User Guide

Product Overview

● Component Description

● How to Wear

Wear the tracker a finger's width behind your wrist bone and lay flat. Adjust the strap to ensure a close contact between tracker sensor and arm skin.

● Battery Charging

Please make sure tracker has sufficient battery for initial use. If tracker does not power on due to low battery, please charge the battery and tracker will automatically power on at sufficient battery level.

Plug tracker USB end to USB port on your computer or a USB wall charger. Ensure good contact between tracker and USB port of the charger or computer so the tracker screen lights up when charging starts. Charging fully takes about one to two hours.

Tracker Assembling

● How to disassemble

Pull strap left on the end opposite to the tracker function key.

Pull tracker out in the direction of the arrow.

● How to assemble

Insert tracker's USB end into strap port.

Pull strap down to snug around tracker.

How to Use

● Power on/off

Standby interface

Power-off interface

Power on

Press function key more than 5 seconds, tracker will vibrate and power on.

Power off

Press function key more than 5 seconds to enter power-off interface, tap function key once to select Off option, press function key again for 5 seconds and tracker will shut down.

● Operation

When tracker is powered on, tap function key to turn on display or flip through different interfaces.

Display turns off after 5 seconds of inactivity; auto-off time can be adjusted in app.
At Standby interface, long press function key to access power on/off options.

● Install app

Scan QR codes below to access the accompanying app, you can also search for "CoBand" in Google Play Store or Apple App Store.

Google Play

App Store

System requirements: Android 4.4 and above. iOS 8 and above. Support smart phones with Bluetooth 4.0 and above.

● Connect Tracker and Phone

Upon initial use, tracker needs to connect to app for automatic time sync to ensure data accuracy.

Open the phone app
↓
Device
↓
PAIR
↓
Click to connect the device

Upon successful connection, app will store tracker's Bluetooth address, and automatically search and connect tracker next time app is launched. To sync data from tracker to app, pull down on the Sport, Sleep and Heart Rate interfaces on the phone to start syncing. Tracker can store data for seven days. Depending on the amount of data, syncing can take a few minutes to complete.

Main APP Features and Setting

● Personal Information and Exercise Goal

For best results, please complete your profile in the app setting.

Setting —> Personal Settings

You can upload a profile picture and set up for gender, age, height and weight.
Such information will help improve tracking data accuracy.

● Notifications

To receive vibration notifications on the tracker, you need to enable notifications in your phone Settings, and ensure tracker and phone stay connected via Bluetooth.

1. Incoming call

With tracker and phone connected and Call notification enabled in app Setting, your tracker vibrates for incoming phone call, and displays call number or caller ID. (If call number is stored as a contact in your phone book, tracker will show caller ID, otherwise call number will be displayed).

2. Message

With tracker and phone connected and message notification enabled in app Setting, tracker vibrates for incoming text message. If message sender is stored as a contact in your phone book, sender's name is displayed otherwise, sender phone number is displayed.

3. Alarm clock

With tracker and phone connected, up to three alarms can be set up in the app. Tracker will remind you with silent vibrations at preset times.

4. Sedentary reminder

With tracker and phone connected and Sedentary notification enabled in app Setting, tracker vibrates if it detects you have been without movements for preset time interval.

5. WeChat

With tracker and phone connected and WeChat notification enabled in app Setting, tracker vibrates for WeChat message.

6. QQ

With tracker and phone connected and QQ notification enabled in app Setting, tracker vibrates for QQ message.

Tip for Android device user:

Allow CoBand app to run in background for notification functions to work, and add CoBand app to trusted apps in your phone settings.

Other Features

More app reminders:

With tracker and phone connected and feature enabled in app Setting, tracker vibrates for additional phone app notifications. (Feature available on selected mobile devices)

● Find bracelet

With tracker and phone connected, click "Find bracelet" and tracker will vibrate.

● Shake to take selfie

With tracker and phone connected, and with tracker on your wrist, you can turn your wrist to operate the camera and take a picture.

● Firmware update

Check for new firmware version. When updating for new version, please ensure a steady Bluetooth connection and sufficient battery level. Update takes a few minutes to complete.

● Factory reset

Bracelet data are all cleared, please exercise caution.

Display Interface Descriptions

● Clock Interface

If Bluetooth icon is , tracker is disconnected with phone.

If Bluetooth icon is , tracker is connected with phone.

● Steps Interface

Steps are tracked in 24-hour cycles. Real-time step count can be accessed on tracker.

● Distance Interface

Tracker calculates distance based on steps and your height that you provided in app settings. Distance unit (km or mile) can be changed in app profile setting.

● Heart Rate Interface (Only on trackers with heart rate function)

On the tracker, when you switch to Heart Rate interface, tracker automatically starts reading, and display shows "--" before reading is finished. Tracker stops reading when you switch away from the Heart Rate interface. You can launch App to sync heart data from tracker to phone App. You can also start heart rate reading using the phone App. When you select "measure" on the Heart Rate page, tracker will start reading and data will automatically sync to phone.

Tips:

When tracker is reading heart rate, the heart rate icon on tracker will animate and LED lights on back of tracker will light up. Please ensure a close contact between tracker sensor and arm skin, so as to avoid interference of ambient lights and to improve accuracy. Please keep the area of arm skin clean and dry; sweat and stains will affect reading accuracy.

● Sleep Mode

Tracker will automatically switch to sleep mode based on time of day and track your sleep quality: deep sleep, light sleep and awake times.

Sleep stats are only available in phone app.

Sleep stats can only be tracked while you wear the tracker during sleep.

FAQ

—Why heart rate measurement does not immediately have a value?

For best results, tracker needs to track the heart rate signal for a longer duration.

—Why wear tracker tight for heart rate reading?

Heart rate reading is based on a light reflection mechanism. Tracker calculates heart rate based on the light beamed from, and reflected back to, the tracker sensor. As a result, if you wear tracker loosely, ambient light will enter the sensor and thus affect reading accuracy.

—Why tracker does not receive notifications from phone?

Please make sure tracker and phone are connected via Bluetooth. On your phone, enable notifications for desired features and apps including "CoBand" app. In "CoBand" app setting, enable desired features and apps in "Smart reminder." If your phone is installed with security software, please add CoBand app to the trusted list. For iOS devices (iPhone, iPad), please shut down device, restart, and reconnect to tracker following on screen prompts.

—Why my phone disconnects with tracker?

On some Android phones, user needs to set CoBand app to run in background so as to avoid disconnection. Setting—>Security—>Background Operation.

Safety Notice

1. Heart rate stats are for reference only, and not to be used for medical purposes.
2. Tracker and phone need to stay connected for data sync.
3. No charging cable is needed for battery charging.
4. If the tracker hangs up or restarts by itself, please clear data in the phone app or exit then relaunch the app.

FCC Warning Statement Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment. This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- - Reorient or relocate the receiving antenna.
- - Increase the separation between the equipment and receiver.
- - Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- - Consult the dealer or an experienced radio/TV technician for help.

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.
