

Battery saving

※ If this function is enabled, the battery saving function can reduce power consumption when no signal is received or no operation is performed (no button pressed, no channel switch rotated). When the channel is not busy and no operation is performed for 10 seconds, the battery saving function is turned on. When a signal is received or an operation is performed, the battery saving function is turned off.

Analog sub-tone (QT)

※ This intercom can be set up with 39 sets of analog sub-tone modules

Companding function

※ The channel companding function must be set to make the voice of the product clearer during calls

Scrambling function

※ When setting the channel scrambling function, even if the frequency sub-tone signaling of other people's products is the same as ours, the other party will not be able to hear the content of our call clearly

Special signaling

※ In addition to standard analog sub-audio (OT), this product can also set special mode and normal mode

Professional
Walkie Talkie

USER'S MANUAL

Get familiar with the machine

Native description

Low power reminder

- ※ Low power warning reminds when the battery needs to be charged or replaced
- ※ When the power is insufficient, the machine has a voice prompt of "please charge", please change the battery pack or charge the machine

Opening and closing of voice number reporting function

- ※ This machine has the function of voice number reporting, which is convenient for you to quickly know the current channel of your interphone when operating at night or in the dark. This function can be realized by writing frequency by computer programming software. The dense transmission prompt tone can be set by writing frequency software, and the start transmission prompt tone/end transmission prompt tone can be set or both can be turned on at the same time

Time-out Timer (TOT)

- ※ The purpose of the time-out timer is to prevent a person from using a channel for too long.
- ※ The time of the timeout timer can be set through the frequency writing software (it can be from 15 seconds to 30 seconds to 600 seconds: each level differs by 15 seconds). If you continuously transmit to the timeout timer you set, the walkie-talkie will stop transmitting and transmit at the same time. "Beep" sound. Press the PTTI switch again to resume transmission

Busy Channel Lock (BCL)

- ※ When activated, this feature prevents interference with other radios that are using the same channel as yours. If the [PTT] key is pressed when the channel is occupied, the walkie-talkie will sound a warning tone and cannot transmit, and returns to receive mode.

TX/RX:462.5500-462.7250MHz 32.87dBm

467.5625-467.7125MHz 26.41dBm

IMPORTANT NOTICE

WARNINGS: Replacement or substitution of transistors, regular diodes or other parts of a unique nature, with parts other than those recommended by Dongkun may cause a violation of the technical regulations of part 95 of the FCC rules, or violation of type acceptance requirements of part 2 of the rules. Your radio is set up to transmit a regulated signal on an assigned frequency. Any adjustment to your radio must be made by qualified technicians.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

- 1) This device may not cause harmful interference, and
- 2) this device must accept any interference received, including interference that may cause undesired operation.

FCC WARNINGS:

Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

SAR tests are conducted using standard operating positions accepted by the FCC with the device transmitting at its highest certified power level in all tested frequency bands, although the SAR is determined at the highest certified power level, the actual SAR level of the device while operating can be well below the maximum value. Before a new model is available for sale to the public, it must be tested and certified to the FCC that it does not exceed the exposure limit established by the FCC. Tests for each product are performed in positions and locations as required by the FCC.

For body worn operation, this device has been tested and meets the FCC RF exposure guidelines when used with an accessory designated for this product or when used with and accessory that contains no metal.

To maintain compliance with the FCC's RF exposure guidelines, hold the transmitter and antenna at least 1 inch(2.5 centimeters) from your face and speak in a normal voice, with the antenna pointed up and away from the face.

This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. In order to comply with the FCC RF exposure requirements, the antenna installation must comply with following:

Users must be fully aware of the hazards of the exposure and able to exercise control over their RF exposure to qualify for the higher exposure limits.

Your wireless hand-held portable transceiver contains a low power transmitter. This product sends out radio frequency (RF) signals when the Push-to-Talk (PTT) Button is pressed.

The device is authorized to operate at a duty factor not to exceed 50%.

Note

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.
