Check whether the power adapter and USB cable function properly. It is recommended to use a power adapter with an output of 5V/1A in combination with the original USB cable.

FCC Warning

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Note
This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

❶ Reorient or relocate the receiving antenna.

❷ Increase the separation between the equipment and receiver.

❸ Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.

❹ Consult the dealer or an experienced radio/TV technician for help.

Note
The Grantee is not responsible for any changes or modifications not expressly approved by the party responsible for compliance, such modifications could void the user's authority to operate the equipment.

The device has been evaluated to meet general RF exposure requirement. The SAR limit of USA(FCC) is 1.6 W/kg averaged over one gram of tissue. Device types LTE MiFi Router with MF3 (FCC ID: 2AQRM-MF3) has also been tested against this SAR limit. The highest reported SAR values for body - worn is 0.627 W/kg. The Max simultaneous SAR is 0.743 W/kg. This device was tested for typical body - worn operations with the back of the handset kept 10mm from the body. The use of accessories that do not satisfy these requirements may not comply with FCC RF exposure requirements, and should be avoided.
