### Know Your Phone

#### Key Instruction

Key	Description
1. MENU/OK	<ul style="list-style-type: none"><li>Enter main menu.</li><li>Performs the function indicated at the left bottom of the screen.</li></ul>
2. Number	<ul style="list-style-type: none"><li>Use these keys to enter numbers and characters.</li></ul>
3. #, *	<ul style="list-style-type: none"><li>Perform different functions under different conditions.</li></ul>
4. Scrolling	<ul style="list-style-type: none"><li>Press these keys to scroll cursor to the left, right, up or down when inputting characters or selecting items.</li><li>Default functions in standby mode are set in Settings menu.</li></ul>
5. NAMES/BACK	<ul style="list-style-type: none"><li>To return to upper menu, or cancel</li><li>Enter the Phonebook in Idle screen</li></ul>
6. EXIT	<ul style="list-style-type: none"><li>To turn ON/OFF the unite</li></ul>
7. MUTE	<ul style="list-style-type: none"><li>To mute the voice while communication</li></ul>
8. MESSAGE	<ul style="list-style-type: none"><li>The shortcut key to enter message menu in standby mode.</li></ul>
9. CALL/REDIAL	<ul style="list-style-type: none"><li>Make a call or answer an incoming call.</li><li>In standby mode, press this key to view calls log.</li></ul>
10. HANDS-FREE	<ul style="list-style-type: none"><li>If you are using the handset to call and want to transfer the call to the speakerphone, press this key and hang up the handset to put conversation on the speakerphone.</li><li>Press this key to end a hands-free call.</li></ul>

Key	Description
1. MENU/OK	<ul style="list-style-type: none"><li>Enter main menu.</li><li>Performs the function indicated at the left bottom of the screen.</li></ul>
2. Number	<ul style="list-style-type: none"><li>Use these keys to enter numbers and characters.</li></ul>
3. #, *	<ul style="list-style-type: none"><li>Perform different functions under different conditions.</li></ul>

Key	Description
4. Scrolling	<ul style="list-style-type: none"><li>Press these keys to scroll cursor to the left, right, up or down when inputting characters or selecting items.</li><li>Default functions in standby mode are set in Settings menu.</li></ul>
5. NAMES/BACK	<ul style="list-style-type: none"><li>To return to upper menu, or cancel</li><li>Enter the Phonebook in Idle screen</li></ul>

10. HANDS-FREE	<ul style="list-style-type: none"><li>If you are using the handset to call and want to transfer the call to the speakerphone, press this key and hang up the handset to put conversation on the speakerphone.</li><li>Press this key to end a hands-free call.</li></ul>

### Interface Icons

**Notes:**

It is strongly recommended to connect the phone to external power outlet, and use internal battery to power your phone only when external power fails or is not available. The phone will charge the internal battery automatically when it is connected to external power outlet.

### How to Make a Call

There are two methods for making a call.

1. Pick up the handset or press the **HANDS-FREE** key.
2. Enter the phone number, press **CALL/REDIAL** key to make the call.

■ The second method:

Enter the number or select recipient's number from **Contacts**, or press **CALL/REDIAL** key to select a number from the **Dialled calls** list, then press **CALL/REDIAL** key to make the call.

**Notes:**

Add the international prefix, country code and area code (without the leading 0) before the number when making an international call.

**3. SIM card**

Always switch the phone off before removing or inserting SIM card.

Open the bottom cover of the battery. Remove the battery, slide the SIM card into the SIM card slot. Make sure that the contact area of the card is facing down, and the beveled corner matches with the SIM card slot. Put in the battery and install the bottom cover.

### Message

Select **Message** in **Menu**.

- Select **Write message** to write message, press **Option** to select **Send to Save**.
- Select **Inbox** to view messages received.
- Select **Outbox** to view the Outgoing messages.
- Select **Drafts** to view the draft messages.
- Select **Sentbox** to view the successfully sent messages.
- Select **Template** to view the template messages.

1

2

3

4

5

6

- Select **SMS settings** to make some necessary short message settings.
- Select **Voice mail server** to make some voice message settings.
- Select **Broadcast message** to view the message.
- Select **Memory status** under **SMS settings** to view the message of saved series and maximum number of entries capacity in phone and SIM.

### Security setting

Security setting could prevent your phone from unauthorized use. The default phone code is 123. Change it to your own as soon as possible.

If you change the default phone code to a new one, remember to replace it at secure place.

### PIN Code andPUK Code

• **PIN code:** PIN code could prevent your SIM card from illegal use. When PIN code is enabled, you should enter the PIN code when powering on the phone again. Change the default PIN code to your own as soon as possible.

• **PUK code:** The SIM card will be locked if you enter a wrong PIN code consecutively for three times. To unlock, you need PUK code.

**Notes:**

**PIN code and PUK code are on the SIM card. If not, contact your service provider for assistance.**

#### FCC Statement

1. This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:
  - (1) This device may not cause harmful interference.
  - (2) This device must accept any interference received, including interference that may cause undesired operation.
2. Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

#### NOTE:

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules.

These limits are designed to provide reasonable protection against harmful interference in a residential installation.

This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

Reorient or relocate the receiving antenna.

Increase the separation between the equipment and receiver.

Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.

Consult the dealer or an experienced radio/TV technician for help.

#### SAR Information Statement

Your wireless phone is a radio transmitter and receiver. It is designed and manufactured not to exceed the emission limits for exposure to radiofrequency (RF) energy set by the Federal Communications Commission of the U.S. Government. These limits are part of comprehensive guidelines and establish permitted levels of RF energy for the general population. The guidelines are based on standards that were developed by independent scientific organizations through periodic and thorough evaluation of scientific studies.

The standards include a substantial safety margin designed to assure the safety of all persons, regardless of age and health. The exposure standard for wireless mobile phones employs a unit of measurement known as the Specific Absorption Rate, or SAR. The SAR limit set by the FCC is 1.6 W/kg. \* Tests for SAR are conducted with the phone transmitting at its highest certified power level in all tested frequency bands. Although the SAR is determined at the highest certified power level, the actual SAR level of the phone while operating can be well below the maximum value. This is because the phone is designed to operate at multiple power levels so as to use only the power required to reach the network. In general, the closer you are to a wireless base station antenna, the lower the power output. Before a phone model is available for sale to the public, it must be tested and certified to the FCC that it does not exceed the limit established by the government adopted requirement for safe exposure. The tests are performed in positions and locations (e.g., at the ear and worn on the body) as required by the FCC for each model. The highest SAR value for this model phone when tested for use on the body, as described in this user guide, is **0.189W/Kg** (Body-worn measurements differ among phone models, depending upon available accessories and FCC requirements). While there may be differences between the SAR levels of various phones and at various positions, they all meet the government requirement for safe exposure. The FCC has granted an Equipment Authorization for this model phone with all reported SAR levels evaluated as in compliance with the FCC RF exposure guidelines. SAR information on this model phone is on file with the FCC and can be found under the Display Grant section of <http://www.fcc.gov/oet/fccid> after searching on

FCC ID: **2AQLJF760** Additional information on Specific Absorption Rates (SAR) can be found on the Cellular Telecommunications Industry Association (CTIA) web-site at <http://www.wow-com.com>. \* In the United States and Canada, the SAR limit for mobile phones used by the public is 1.6 watts/kg (W/kg) averaged over one gram of tissue. The standard incorporates a substantial margin of safety to give additional protection for the public and to account for any variations in measurements.

**Body-worn Operation**

This device was tested for typical body-worn operations. To comply with RF exposure requirements, a minimum separation distance of **25mm** must be maintained between the user's body and the handset, including the antenna. Third-party belt-clips, holsters, and similar accessories used by this device should not contain any metallic components. Body-worn accessories that do not meet these requirements may not comply with RF exposure requirements and should be avoided. Use only the supplied or an approved antenna.
