

## WTM Internal Photos

View	Photo
In-Housing Front	 The image shows the internal components of a WTM (Wireless Traffic Monitor) device. On the left, the black plastic housing is open, revealing a green printed circuit board (PCB) with various electronic components, including a central microcontroller, memory chips, and a large orange heat sink. A cylindrical blue and white battery is mounted on the board. On the right, the white, rounded rectangular exterior of the device is shown, with a small circular logo on the front panel.
