### Equipment under test (EUT):

Product description The device PP120 is a pump providing irrigation and suction function for laparoscopy

Model No. PP120

Additional Model(s) None

Brand Name(s) LAP-Pump

Hardware version 04/15

Firmware / Software version 01.01

Contains FCC-ID: 2AS5K-TSHW42 IC: 25004-TSHW42A

Test result Passed

Test Report No.: G0M-1806-7459-TFC091ME-V02

**Possible test case verdicts:**

- neither assessed nor tested .....: N/N
- required by standard but not appl. to test object.....: N/A
- required by standard but not tested.....: N/T
- not required by standard for the test object .....: N/R
- test object does meet the requirement.....: P (Pass)
- test object does not meet the requirement.....: F (Fail)

**Testing:**

Test Lab Temperature .....: 20 – 23 °C

Test Lab Humidity .....: 32 – 38 %

Date of receipt of test item .....: 2019-03-21

Date (s) of assessment .....: 2019-05-09

Compiled by .....: Burkhardt Pudell

Assessed by (+ signature) .....: Burkhard Pudell  
(Responsible for Assessment)

Approved by (+ signature) .....: Christian Weber  
(Deputy Head of Lab)

Date of issue .....: 2019-08-22

Total number of pages .....: 14

**General remarks:**

**The test results presented in this report relate only to the object tested.**

**The results contained in this report reflect the results for this particular model and serial number. It is the responsibility of the manufacturer to ensure that all production models meet the intent of the requirements detailed within this report.**

This report shall not be reproduced, except in full, without the written approval of the Issuing testing laboratory.

### 3 Radiated Field Measurement

#### 3.1 Test Conditions and Results – Electric and magnetic field strength

ELECTRIC AND MAGNETIC FIELD STRENGTH					
Test frequency range			Tested frequencies		
			F <sub>MID</sub>		
EUT test mode			RFID		
Measurement method			radiated only		
Test procedure					
1. EUT transmitter is activated in test mode under normal conditions					
2. The perimeter of the EUT is scanned with an electric and magnetic field probe at a fixed distance					
3. The electric and magnetic field strength is measured					
4. The maximum field strength values are recorded					
Test results					
Channel	Frequency [MHz]	Mode	Distance [m]	Max. electric field strength [V/m]	Max. magnetic field strength [A/m]
F <sub>MID</sub>	13.5609	Transmit	0.2*	1.26	0.011

#### 4 RF-Exposure Classifications

Device Types	
Fixed	A fixed device is defined as a device physically secured at one fixed location and cannot be easily re-located.
Mobile	A mobile device is defined as a transmitting device designed to be used in other than fixed locations and to generally be used in such a way that a separation distance of at least 20 centimeters is normally maintained between the transmitter's radiating structure(s) and the body of the user or nearby persons. (47 CFR 2.1091)
Portable	A portable device is defined as a transmitting device designed to be used so that the radiating structure(s) of the device is/are within 20 centimeters of the body of the user. (47 CFR 2.1093)
Exposure Categories	
Occupational / Controlled	Limits apply in situations in which persons are exposed as a consequence of their employment provided those persons are fully aware of the potential for exposure and can exercise control over their exposure. Limits for occupational/controlled exposure also apply in situations when an individual is transient through a location where occupational/controlled limits apply provided he or she is made aware of the potential for exposure.
General population / uncontrolled	Exposures apply in situations in which the general public may be exposed, or in which persons that are exposed as a consequence of their employment may not be fully aware of the potential for exposure or cannot exercise control over their exposure.

Assessment procedure				
<p>The evaluation is performed at a separation distance of 20 cm. The reference levels are taken from 47 CRF 1.1310 for FCC and RSS-102 for ISED according to the exposure category declared by customer.</p> <p>For each radio and frequency band the worst case transmission mode with the highest output power is activated and the surrounding area around the EUT is scanned using an electric and a magnetic field probe at the distance given in the test report. The maximum electric and magnetic field strength values measured are compared to the corresponding reference levels. If both measured field strength values are below the reference levels the EUT has passed the RF-Exposure requirements.</p>				

## 5.2 Single-Transmitter Evaluation – FCC 47 CFR 2.1091 / ISED RSS-102

Assessment results – RFID		
Transmission mode		
Operating mode frequency range [MHz]	13.5609	
Assessment frequency (f) [MHz]	13.5609	
Compliance separation distance to EUT [m]	0.2	
Electric Field		
Measured max. electric field strength [V/m]	1.26	
Reference level [V/m]	62.09 (FCC)	27.46 (ISED)
Verdict	PASS	
Magnetic Field		
Measured max. magnetic field strength [A/m]	0.011	
Reference level [A/m]	0.162 (FCC)	0.0728 (ISED)
Verdict	PASS	
Verdict		
The field strength level of the EUT are below the RF-Exposure reference level at the given compliance separation distance!
