This document may be altered or revised by KCTL Inc. personnel only, and shall be noted in the revision section of the document. Any alteration of this document not carried out by KCTL Inc. will constitute fraud and shall nullify the document. This test report is a general report that does not use the KOLAS accreditation mark and is not related to KS Q ISO/IEC 17025 and KOLAS accreditation.*

## General remarks for test reports

### Statement concerning the uncertainty of the measurement systems used for the tests

(may be required by the product standard or client)

☐ Internal procedure used for type testing through which traceability of the measuring uncertainty has been established:

### Procedure number, issue date and title:

Calculations leading to the reported values are on file with the testing laboratory that conducted the testing.

☒ Statement not required by the standard or client used for type testing

# CONTENTS

## 1. General information

Client : People and Technology  
 Address : 2rd floor(Samsung-dong, Youngchang Building), 27, Samseong-ro 95-gil, Gangnam-gu, Seoul, Republic of Korea  
 Manufacturer : People and Technology  
 Address : 2rd floor(Samsung-dong, Youngchang Building), 27, Samseong-ro 95-gil, Gangnam-gu, Seoul, Republic of Korea  
 Laboratory : KCTL Inc.  
 Address : 65, Sinwon-ro, Yeongtong-gu, Suwon-si, Gyeonggi-do, 16677, Korea  
 Accreditations : FCC Site Designation No: KR0040, FCC Site Registration No: 687132  
 VCCI Registration No. : R-20080, G-20078, C-20059, T-20056  
 CAB Identifier: KR0040  
 ISED Number: 8035A  
 KOLAS No.: KT231

## 2. Device information

Equipment under test : BLE Scanner  
 Model : IP-WLBG-4CH  
 Modulation technique : Bluetooth Low Energy \_GFSK  
 WIFI(802.11a/b/g/n\_HT20)\_DSSS, OFDM  
 Number of channels : Bluetooth Low Energy : 40 ch  
 802.11b/g/n\_HT20 : 13 ch  
 UNII-1: 4 ch (20 MHz)  
 UNII-2A: 4 ch (20 MHz)  
 UNII-2C: 11 ch (20 MHz)  
 UNII-3: 5 ch (20 MHz)  
 Power source : DC 5 V  
 Antenna specification : Monopole Antenna  
 Antenna gain : Bluetooth Low Energy : 2.44 dBi  
 802.11 b/g/n\_HT20 : 2.44 dBi  
 UNII-1 : 2.27 dBi  
 UNII-2A : 3.81 dBi  
 UNII-2C : 5.20 dBi  
 UNII-3 : 4.24 dBi  
 Frequency range : Bluetooth Low Energy : 2 402 MHz ~ 2 480 MHz  
 802.11b/g/n\_HT20 : 2 412 MHz ~ 2 472 MHz  
 UNII-1: 5 180 MHz ~ 5 240 MHz (802.11a)  
 UNII-2A: 5 260 MHz ~ 5 320 MHz (802.11a)  
 UNII-2C: 5 500 MHz ~ 5 720 MHz (802.11a)  
 UNII-3: 5 745 MHz ~ 5 825 MHz (802.11a)  
 Software version : 1.0  
 Hardware version : 1.0  
 Test device serial No. : N/A  
 Operation temperature : -20 °C ~ 50 °C

## 2.1. Frequency/channel operations

This device contains the following capabilities:

WiFi (802.11a/b/g/n), Bluetooth (BLE)

**UNII-2A**

Ch.	Frequency (MHz)
52	5 260
56	5 280
·	·
64	5 320

**UNII-2C**

Ch.	Frequency (MHz)
100	5 500
·	·
120	5 600
·	·
140	5 700
144	5 720

Table 2.1-1. 802.11a mode

**Notes:**

1. The device supports DFS bands between UNII-2A and UNII-2C and operates as a slave device without radar detection controlled by master.

<b>KCTL Inc.</b> 65, Sinwon-ro, Yeongtong-gu, Suwon-si, Gyeonggi-do, 16677, Korea TEL: 82-31-285-0894 FAX: 82-505-299-8311 <a href="http://www.kctl.co.kr">www.kctl.co.kr</a>	Report No.: KR22-SRF0045-A Page (6) of (16)	   
---	---	---

### 3. Summary of tests

FCC Part section(s)	Parameter	Test results
15.407(h)	DFS -Channel closing transmission time -Channel move time -Non occupied period	Pass

#### Notes:

- The test procedure(s) in this report were performed in accordance as following.
  - ♦ KDB 905462 D02 UNII DFS compliance procedure new rules.
  - ♦ KDB 905462 D03 UNII client without radar detection new rules.
- The device does not support radar detection feature.

## 4 Test results

### 4.1. DFS (Dynamic Frequency Selection)

#### Test description

##### - Applicability of DFS requirements prior to use of a channel

Requirement	Operational Mode		
	Master	Client (without radar detection)	Client (with radar detection)
Non-Occupancy Period	Yes	Not required	Yes
DFS Detection Threshold	Yes	Not required	Yes
Channel Availability Check Time	Yes	Not required	Not required
U-NII Detection Bandwidth	Yes	Not required	Yes

##### - Applicability of DFS requirements during normal operation

Requirement	Operational Mode	
	Master Device or Client with Radar Detection	Client Without Radar Detection
DFS Detection Threshold	Yes	Not required
Channel Closing Transmission Time	Yes	<u>Yes</u>
Channel Move Time	Yes	<u>Yes</u>
Bandwidth	Yes	Not required

Additional requirements for devices with multiple bandwidth modes	Master Device or Client with Radar Detection	Client Without Radar Detection
U-NII Detection Bandwidth and Statistical Performance Check	All BW modes must be tested	Not required
Channel Move Time and Channel Closing Transmission Time	Test using widest BW mode available	<u>Test using the widest BW mode available for the link</u>
All other tests	Any single BW mode	Not required

**Note:** Frequencies selected for statistical performance check (Section 7.8.4) should include several frequencies within the radar detection bandwidth and frequencies near the edge of the radar detection bandwidth. For 802.11 devices it is suggested to select frequencies in each of the bonded 20 MHz channels and the channel center frequency.

#### - Requirements of client devices

- a) A Client Device will not transmit before having received appropriate control signals from a Master Device.
- b) A Client Device will stop all its transmissions whenever instructed by a Master Device to which it is associated and will meet the Channel Move Time and Channel Closing Transmission Time requirements. The Client Device will not resume any transmissions until it has again received control signals from a Master Device.
- c) If a Client Device is performing In-Service Monitoring and detects a Radar Waveform above the DFS Detection Threshold, it will inform the Master Device. This is equivalent to the Master Device detecting the Radar Waveform and d) through f) of section 5.1.1 apply.
- d) Irrespective of Client Device or Master Device detection the Channel Move Time and Channel Closing Transmission Time requirements remain the same.
- e) The client test frequency must be monitored to ensure no transmission of any type has occurred for 30 minutes. Note: If the client moves with the master, the device is considered compliant if nothing appears in the client non-occupancy

#### - DFS Response requirement values

Parameter	Value
Non-occupancy period	Minimum 30 minutes
Channel Availability Check Time	60 seconds
Channel Move Time	10 seconds See Note 1.
Channel Closing Transmission Time	200 milliseconds + an aggregate of 60 milliseconds over remaining 10 second period. See Notes 1 and 2.
<p>Note 1: Channel Move Time and the Channel Closing Transmission Time should be performed with Radar Type 0. The measurement timing begins at the end of the Radar Type 0 burst.</p> <p>Note 2: The Channel Closing Transmission Time is comprised of 200 milliseconds starting at the beginning of the Channel Move Time plus any additional intermittent control signals required to facilitate a Channel move (an aggregate of 60 milliseconds) during the remainder of the 10 second period. The aggregate duration of control signals will not count quiet periods in between transmissions.</p>	

### - Interference Threshold values, Master or Client incorporating In-Service Monitoring

Maximum Transmit Power	Value (see note)
$\geq 200$ milliwatt	-64 dBm
$< 200$ milliwatt $\text{power spectral density} < 10 \text{ dBm/MHz}$	-62 dBm
EIRP $< 200$ milliwatt that do not meet the power spectral density requirement	-64 dBm

Note 1: This is the level at the input of the receiver assuming a 0 dBi receive antenna

Note 2: Throughout these test procedures an additional 1 dB has been added to the amplitude of the test transmission waveforms to account for variations in measurement equipment. This will ensure that the test signal is at or above the detection threshold level to trigger a DFS response.

Note3: EIRP is based on the highest antenna gain. For MIMO devices refer to KDB Publication 662911 D01.

### - Radar test waveforms

Type	Pulse Width ( $\mu\text{sec}$ )	PRI ( $\mu\text{sec}$ )	Number of Pulses	Minimum Percentage of Successful Detection	Minimum Number of Trials
0	1	1428	18	See Note 1	See Note 1
1	1	Test A: 15 unique PRI values randomly selected from the list of 23 PRI values in Table 5a	$\text{Roundup}\left\{\left(\frac{1}{360}\right) \cdot \left(\frac{19 \cdot 10^6}{\text{PRI}_{\mu\text{sec}}}\right)\right\}$	60%	30
		Test B: 15 unique PRI values randomly selected within the range of 518-3066 $\mu\text{sec}$ , with a minimum increment of 1 $\mu\text{sec}$ , excluding PRI values selected in Test A			
2	1-5	150-230	23-29	60%	30
3	6-10	200-500	16-18	60%	30
4	11-20	200-500	12-16	60%	30
Aggregate (Radar Types 1-4)				80%	120

Note 1: Short Pulse Radar Type 0 should be used for the detection bandwidth test, channel move time, and channel closing time tests.

Note 2: This report was applied Short Pulse Radar Type 0.

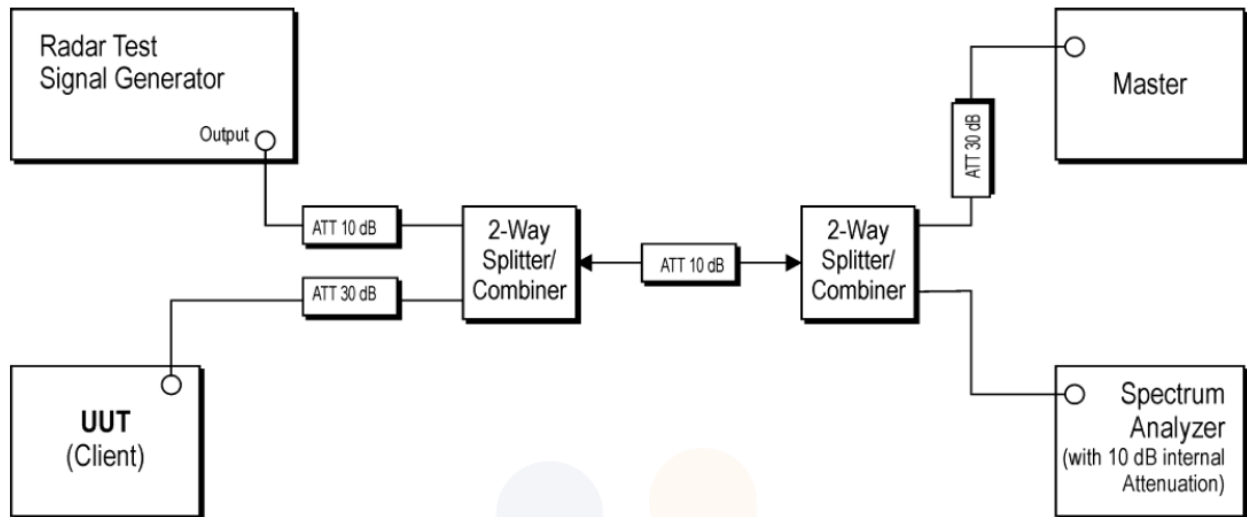

\*Short Pulse Radar Test Waveforms

Radar Type	Pulse Width (μs)	Chirp Width (MHz)	PRI (μs)	Number of Pulses per Burst	Number of Bursts	Minimum percentage of Successful Detection	Minimum Number of Trials
5	50-100	5-20	1000-2000	1-3	8-20	80%	30

\*Long Pulse Radar Test Waveform

Radar Waveform	Pulse Width (μsec)	PRI (μsec)	Pulses per Hop	Hopping Rate (kHz)	Hopping Sequence Length (μs)	Minimum Percentage of Successful Detection	Minimum Trials
6	1	333	9	0.333	300	70%	30

\*Frequency Hopping Radar Test Waveform

**Test setup****- Setup for Client with injection at the Master****- Spectrum analyzer setting parameter**

This setting parameter is shown below and it according to the 905462 D02 UNII DFS Compliance Procedures New Rules.

- 1) RBW/VBW  $\geq 3$  MHz
- 2) Detector = peak
- 3) Span = zero span

**- Conducted test procedure**

- 1) One frequency will be chosen from the Operating Channels of the UUT within the 5 250-5 350 MHz or 5 470-5 725 MHz bands.
- 2) The Client Device (EUT) is set up the above diagram and communications between the Master device and the Client is established.
- 3) Stream the channel loading test file from the Master Device to the Client Device on the test Channel for the entire period of the test.
- 4) An additional 1 dB is added to the radar test signal to ensure it is at or above the DFS Detection Threshold, accounting for equipment variations/errors.
- 5) Observe the transmissions of the UUT at the end of the Burst on the Operating Channel for duration greater than 12 seconds for Radar Type 0 to ensure detection occurs.
- 6) After the initial radar burst the channel is monitored for 30 minutes to ensure no transmissions or beacons occur. A second monitoring setup is used to verify that the Master and Client have both moved to different channels.
