

TCB Comments:

Applicant meets e-labelling requirements of KDB 784748 D02 Section 4.5.

Excerpt:

"4.5 Physical and Temporary label for Purchasing and Importation

When e-labeling is used, a physical temporary label is also required on the product, or a label on the packaging, at the time of importation, marketing, and sales.(See 47 CFR § 2.935(f)) The physical label can be a summary version of the required regulatory information, such that the product can be identified as complying with the FCC's equipment authorization requirements. The information may simply be the FCC ID for products subject to certification.

Products imported that are already packaged for sale and have a physical temporary label will satisfy this requirement. However, for products imported in bulk and not packaged individually, it is acceptable to use a temporary removable adhesive label on the product, or temporary or permanent labels on the shipping packaging or protective bags. Any removable adhesive label shall be of a type intended to survive normal shipping and handling."

The applicant declares the products are manufactured in the US thereby obviating the need for importation labelling. Furthermore, the applicant declares that the products are under direct control of the applicant until delivery to the end user in a powered-on state. The users manual includes instructions for obtaining the FCC ID and is supplied with the product. Therefore the FCC ID is accessible to end user upon receipt of the product. See cover letters for attestations from the applicant.
