

Date: 21st June 2019

Laird Connectivity hereby certifies the following:

- a) Brüel & Kjær has for the Sound-Level Meter 2245/2255 changed the following line in our (Laird) driver for the 60-SIPT wireless module:

`"priv->disable_5g = false";` to

`"priv->disable_5g = true";`

We acknowledge that this effectively disables the 5 GHz functionality without any side-effects for the 2.4 GHz functionality with the current investigation we have carried out. We have not fully tested this and Brüel & Kjær must test this and satisfy themselves that this operates as they wish it to.

- b) Brüel & Kjær needs our test reports for the Laird 60-SIPT WiFi/Bluetooth module.

We approve the use of these in the certification of the Brüel & Kjær Sound-Level Meter 2245/2255.
