**Declaration**

Date: March 21<sup>st</sup>, 2019

Subject: SVM (Surround View Monitoring) system classification

With reference to the above subject, we, KSS-ImageNext, would like to state as under:

The SVM system we manufacture is configured to be powered by the vehicle's battery it is installed in, which requires wiring service from those who have special knowledge in car wiring. In order for the system to function rightly, calibration process is a must, and the calibration process can be completed with proprietary tools and equipment that we provide to designated distributors only with a series of training sessions. Given the difficulty, complexity and tools and equipment required for installation and calibration, the SVM system we manufacture can only be handled by those who have signed a distributorship contract with and received extensive training from us. Accordingly, the SVM system we manufacture cannot be installed nor calibrated by general public.

For and on behalf of KSS-ImageNext Co., Ltd.
