RE: Differences Between Module B01-007A and B01-007B

To Whom It May Concern,

The RF performance/RF design and antenna type between the two models are identical. The difference between the two models is: model B01-007A is a larger PCB and uses a capacitive touch sensor to determine movements. Model B01-007B is a smaller PCB that uses a hall effect sensor to determine if the trap is open or closed.
