Difference between the following three variants

MMS-Inspection DFT

MMS-Inspection SPG

MMS-Inspection DPM

**FCC ID: 2ATFE-MMSINSPEC00**

Date: 04.09.2019

To whom it may concern:

This document is intended to indicate the differences between the three variants and why do all these devices share the same FCC ID.

This is a modular platform which consists of a Display unit and a Measurement unit. The Display unit contains the communication interfaces (USB, WIFI, and BT) with output devices. This Display unit is shared between all the three variants. That means that the same PCB in the Display Unit is being used for all variants. The Display unit communicates over a digital interface (UART) with all measurement units which are fix integrated to the device. The measurement units of the SPG and DFT are the same regarding the electrical parts where DPM differs regarding the analogue part.

Sincerely

Hardware Development  
Dipl.-Ing. Bilal Akra
