Modification of DUT:	None

3.0 SCOPE

This Certification Report was prepared on behalf of:

Myriota Pty Ltd

„(the '*Applicant*'), in accordance with the applicable Federal Communications Commission (FCC) CFR 47 and Innovation, Scientific and Economic Development (ISED) Canada rules parts and regulations (the '*Rules*'). The scope of this investigation was limited to only the equipment, devices and accessories (the '*Equipment*') supplied by the *Applicant*. The tests and measurements performed on this *Equipment* were only those set forth in the applicable *Rules* and/or the Test and Measurement Standards they reference. The *Rules* applied and the Test and Measurement Standards used during this evaluation appear in the Normative References section of this report. The limits set forth in the technical requirements of the applicable *Rules* were applied to the measurement results obtained during this evaluation and, unless otherwise noted, these limits were used as the Pass/Fail criteria. The Pass/Fail statements made in this report apply to only the tests and measurements performed on only the *Equipment* tested during this evaluation. Where applicable and permissible, information including test and measurement data and/or results from previous evaluations of same or similar equipment, devices and/or accessories may be cited in this report.

As per FCC 47 CFR Part §2.1091 and §2.1093, an RF Exposure evaluation report is required for this *Equipment* and the results of the RF Exposure evaluation appear in a separate exhibit from this report.

The Receiver of this *Equipment* is subject to Equipment Certification or Supplier's Declaration of Conformity (SDoC) in accordance with 47 CFR Part §15.101. The Receiver was evaluated in accordance with 47 CFR Part §15 Subpart B and ICES-003. A statement of the application of the SDoC procedure appears in a separate exhibit from this report.

Application: This is an application for a new FCC and ISED certification.

I attest that the data reported herein is true and accurate within the tolerance of the Measurement Instrument Uncertainty; that all tests and measurements were performed in accordance with accepted practices or procedures; and that all tests and measurements were performed by me or by trained personnel under my direct supervision. The results of this investigation are based solely on the test sample(s) provided by the client which were not adjusted, modified or altered in any manner whatsoever, except as required to carry out specific tests or measurements. This test report has been completed in accordance with ISO/IEC 17025.

6.0 FACILITIES AND ACCREDITATIONS

Facility and Accreditation:

The facilities used to evaluate this device outlined in this report are located at 21-364 Loughheed Road, Kelowna, British Columbia, Canada V1X 7R8. The radiated emissions site (OATS) conforms to the requirements set forth in ANSI C63.4 and is filed and listed with the FCC under Test Firm Registration Number CA3874 and Innovation, Science and Economic Development Canada under Test Site File Number ISED 3874A-1. Celltech is accredited to ISO 17025, through accrediting body A2LA and with certificate 2470.01.

7.0 RADIATED FIELD STRENGTH

Test Procedure

Normative Reference	FCC 47 CFR §2.1046, §15.240, RSS-Gen (6.12), RSS-210 ANSI C63.10
----------------------------	---

Limits

47 CFR §15.240	Operation in the band 433.5-434.5 MHz. (b) The field strength of any emissions radiated within the specified frequency band shall not exceed 11,000 microvolts per meter measured at a distance of 3 meters. The emission limit in this paragraph is based on measurement instrumentation employing an average detector. The peak level of any emissions within the specified frequency band shall not exceed 55,000 microvolts per meter measured at a distance of 3 meters.
RSS-210	Annex D - Radio Frequency Identification (RFID) Devices in the Band 433.5-434.5 MHz (b) The field strength of any emissions radiated within the band 433.5-434.5 MHz shall not exceed 11,000 $\mu\text{V}/\text{m}$ measured at 3 m with an average detector. The peak level of any emission within this specified frequency band shall not exceed 55,000 $\mu\text{V}/\text{m}$ measured at 3m

Test Setup

Appendix A - Figure A2

Measurement Procedure

The DUT was placed on an 80cm turntable on an Open Area Test Site (OATS) at a test distance of 3m. The output power of the DUT was set to the manufacturer's highest output power setting. The DUT was set to transmit at its maximum Duty Cycle. Emissions were evaluated while the DUT was rotated from 0° through 360° with the receive antenna elevated from 1 to 4 meters in both horizontal and vertical polarizations.

Result:											Complies	

$$E = E_{MEAS} + L_C + AFC$$

$$\text{Margin} = E_L - E$$

A Negative Margin (-) indicates non-compliance

8.0 BAND EDGE EVALUATION

Test Procedure

Normative	FCC 47 CFR §2.1046, §15.215
Reference	ANSI C63.10

Limits

47 CFR §15.215	Additional provisions to the general radiated emission limitations. (c) Intentional radiators operating under the alternative provisions to the general emission limits, as contained in §§15.217 through 15.257 and in subpart E of this part, must be designed to ensure that the 20 dB bandwidth of the emission, or whatever bandwidth may otherwise be specified in the specific rule section under which the equipment operates, is contained within the frequency band designated in the rule section under which the equipment is operated.
-----------------------	--

Test Setup	Appendix A - Figure A.1
-------------------	--------------------------------

Measurement Procedure

The DUT was placed on an 80cm turntable on an Open Area Test Site (OATS) at a test distance of 3m. The output power of the DUT was set to the manufacturer's highest output power setting. The DUT was set to transmit at its maximum Duty Cycle. Emissions were evaluated while the DUT was rotated from 0° through 360° with the receive antenna elevated from 1 to 4 meters in both horizontal and vertical polarizations.

APPENDIX C – MEASUREMENT INSTRUMENT UNCERTAINTY

CISPR 16-4 Measurement Uncertainty (U_{LAB})	
This uncertainty represents an expanded uncertainty expressed at approximately the 95% confidence interval using a coverage factor of k=2	
30MHz - 200MHz	
$U_{LAB} = 5.14\text{dB}$ $U_{CISPR} = 6.3\text{dB}$	
200MHz - 1000MHz	
$U_{LAB} = 5.90\text{dB}$ $U_{CISPR} = 6.3\text{dB}$	
1GHz - 6GHz	
$U_{LAB} = 4.80\text{dB}$ $U_{CISPR} = 5.2\text{dB}$	
6GHz - 18GHz	
$U_{LAB} = 5.1\text{dB}$ $U_{CISPR} = 5.5\text{dB}$	
If the calculated uncertainty U_{lab} is less than U_{CISPR} then:	
1	Compliance is deemed to occur if NO measured disturbance exceeds the disturbance limit
2	Non-Compliance is deemed to occur if ANY measured disturbance EXCEEDS the disturbance limit
If the calculated uncertainty U_{lab} is greater than U_{CISPR} then:	
3	Compliance is deemed to occur if NO measured disturbance, increased by ($U_{lab} - U_{CISPR}$), exceeds the disturbance limit
4	Non-Compliance is deemed to occur if ANY measured disturbance, increased by ($U_{lab} - U_{CISPR}$), EXCEEDS the disturbance limit
