Date: February 21, 2023

Electro Magnetic Test, Inc. 1547 Plymouth Street Mountain View, CA 94043

To Whom It May Concern:

I am writing this letter to address the measurement discrepancies that were found in the FCC Part 15.407, Subpart E test report for the product Skydio Beacon with FCC ID: 2ATQRSBEC1V1.

We have reviewed the original data and performed new output power testing on the U-NII-1 and U-NII-3 channels for 5MHz and 10MHz bandwidths. The re-tested output power values align with those measured by the TCB lab, we believe the difference between the re-tested value and the original data can be most likely attributed to not compensating for the cable loss in the original test.

After careful review of this project and a few others, we determined this was an isolated incident which only affected the 5GHz conducted output power measurements in this particular report. The 2.4GHz conducted output power was reported correctly and closely matched the TCB test lab results, therefore Skydio Beacon with FCC ID: 2ATQRSBEC1V1 DTS (2.4GHz) band results are also not affected.

A new revision of the test report has been compiled with the re-tested data.
