

FCC ID: 2ATXZMO7010

According to KDB 447498 D01 General RF Exposure Guidance v06, section 4.2.4

When the aggregate of the maximum power available at the antenna port and radiating structures of an implanted transmitter, under all operating circumstances, is  $\leq 1.0$  mW, SAR test exclusion may be applied.

**1. SAR test exclusion threshold**

- Based on field strength 60.72 dBuV/m at 3m transmit power(eirp) of the device was calculated as 0.0004 mW using free space formula.
- Maximum power 0.0004 mW is less than 1 mW.

**2. Conclusion: No SAR is required.**
