

GourmetBlue series BLE Module Datasheet

1. Product Description

GourmetBlue series BLE module is a highly integrated BLE® 4.0 module with NFC function, it was designed for high data rate, short-range wireless communication in the 2.4GHz ISM band. The module is designed based on Nordic® Semiconductor nRF52832 radio Transceiver IC, has a 32 bit ARM® Cortex-M4 CPU, flash memory and analog and digital peripherals. GourmetBlue BLE module provides a low power and ultra-low cost BLE and proprietary protocols for wireless transmission applications.

2. Key Features

- 32 bits ARM® Cortexm-M4 @ 16MHz
- 2.4GHz multi-protocol transceiver
- 64KB SRAM
- 512KB Flash
- 30 configurable I/O pins, 22 General Purpose I/O pins
- One 32 and two 16 bit timers with counter mode
- 20 channel CPU independent Programmable Peripheral Interconnect (PPI)
- Encryption -128 bit AES ECB/CCM/AAR co-processor
- RNG, RTC
- Temperature sensor
- Digital interfaces SPI Master/Slave, 2-wire Master (I2C compatible), UART (CTS/RTS), IIS, PDM
- Quadrature decoder
- 12bit 200KSPS ADC - 8 configurable channels
- Low power comparator
- -96dBm sensitivity
- Single-ended antenna
- NFC-A tag
- Tx Power -40 to +4 dBm in 8 dB steps
- 7.5mA TX at +4dBm
- Operating voltage : 1.8V to 3.6V
- Dimension : 23x13.8x0.8mm

3. Applications

- Computer peripherals and I/O devices Mouse
Keyboard
Multi-touch trackpad
- Interactive entertainment devices Remote control
3D Glasses Gaming controller
- Personal Area Networks
Health/fitness sensor and monitor devices Medical devices
Key-fobs + wrist watches
- Remote control toys
- Beacons
- Bluetooth Gateway
- Indoor Location

4. Interfaces

4.1 Power Supply

Regulated power for the **GourmetBlue BLE Module** is required. The input voltage VCC range should be 1.8V to 3.6V. Suitable decoupling must be provided by external decoupling circuitry (10uF and 0.1uF). It can reduce the noise from power supply and increase power stability.

4.2 System Function Interfaces

4.2.1 GPIOs

The general purpose I/O is organized as one port with up to 22 I/Os enabling access and control of up to 22 pins through one port. Each GPIO can be accessed individually with the following user configurable features:

- ◆ Input/output direction
- ◆ Output drive strength
- ◆ Internal pull-up and pull-down resistors
- ◆ Wake-up from high or low level triggers on all pins
- ◆ Trigger interrupt on all pins
- ◆ All pins can be used by the PPI task/event system; the maximum number of pins that can be interfaced through the PPI at the same time is limited by the number of GPIOTE channels
- ◆ All pins can be individually configured to carry serial interface or quadrature demodulator signals
- ◆ All pins can be configured as PWM signal

4.2.2 Two-wire Interface (I2C Compatible)

The two-wire interface can communicate with a bi-directional wired-AND bus with two lines (SCL, SDA). The protocol makes it possible to interconnect up to 127 individually addressable devices. The interface is capable of clock stretching, supporting data rates of 100 kbps ,250kbps and 400 kbps. The module has 2 TWI ports and they properties like following table.

Instance	Master/Slave
TWI 0	Master

4.2.3 Flash Program I/Os

The module has two programmer pins, respectively SWDCLK pin and SWDIO pin. The two pin Serial Wire Debug (SWD) interface provided as a part of the Debug Access Port (DAP) offers a flexible and powerful mechanism for non-intrusive debugging of program code. Breakpoints and single stepping are part of this support.

4.2.4 Serial Peripheral Interface

The SPI interfaces enable full duplex synchronous communication between devices. They support a three-wire (SCK, MISO, MOSI) bi-directional bus with fast data transfers. The SPI Master can communicate with multiple slaves using individual chip select signals for each of the slave devices attached to a bus. Control of chip select signals is left to the application through use of GPIO signals. SPI Master has double buffered I/O data. The SPI Slave includes EasyDMA for data transfer directly to and from RAM allowing Slave data transfers to occur while the CPU is IDLE. The GPIOs are used for each SPI interface line can be chosen from any GPIOs on the device and independently. This enables great flexibility in device pinout and efficient use of printed circuit board space and signal routing.

4.2.5 UARTs

The Universal Asynchronous Receiver/Transmitter offers fast, full-duplex, asynchronous serial communication with built-in flow control (CTS, RTS), support in hardware up to 1 Mbps baud. Parity checking is supported. Support the following baudrate in bps unit: 1200/2400/4800/9600/14400/19200/28800/38400/57600/76800/115200.

- Note: The GPIOs are used for each SPI/TWI/UART interface line can be chosen from any GPIOs on the device and configed independently.

4.2.6 Analog to Digital Converter (ADC)

The 12 bit incremental Analog to Digital Converter (ADC) enables sampling of up to 8 external signals through a front-end multiplexer. The ADC has configurable input and reference prescaling, and sample resolution (8,10, and 12 bit).

- Note: The ADC module uses the same analog inputs as the LPCOMP module. Only one of the modules can be enabled at the same time.

GourmetBlue BLE Module Pin Number	Pin Number	Description
4	P0.28	Digital I/O; Analog input 4
5	P0.29	Digital I/O; Analog input 5
6	P0.30	Digital I/O; Analog input 6
7	P0.31	Digital I/O; Analog input 7
24	P0.02	Digital I/O; Analog input 0
25	P0.03	Digital I/O; Analog input 1
26	P0.04	Digital I/O; Analog input 2
27	P0.05	Digital I/O; Analog input 3

4.2.7 Low Power Comparator (LPCOMP)

In System ON, the block can generate separate events on rising and falling edges of a signal, or sample the current state of the pin as being above or below the threshold. The block can be configured to use any of the analog inputs on the device. Additionally, the low power comparator can be used as an analog wakeup source from System OFF or System ON. The comparator threshold can be programmed to a range of fractions of the supply voltage.

4.2.8 Reset

The reset pin of the GourmetBlue series module is in the internal pull-high state, when the reset pin of the module is input to a low level, the module will be automatically reset. After the reset pin is used, the parameters of the current setting will not be reserved.

4.2.9 NFC

The NFC peripheral (referred to as the 'NFC peripheral' from now on) supports communication signal interface type A and 106 kbps bit rate from the NFC Forum.

With appropriate software, the NFC peripheral can be used to emulate the listening device NFC-A as specified by the NFC Forum.

Listed here are the main features for the NFC peripheral:

- ◆ NFC-A listen mode operation
- ◆ 13.56 MHz input frequency
- ◆ Bit rate 106 kbps
- ◆ Wake-on-field low power field detection (SENSE) mode
- ◆ Frame assemble and disassemble for the NFC-A frames specified by the NFC Forum
- ◆ Programmable frame timing controller
- ◆ Integrated automatic collision resolution, CRC and parity functions

GourmetBlue BLE Module Pin Number	Pin Number	Description
15	P0.09	Digital I/O; NFC1
16	P0.10	Digital I/O; NFC2

5. Module Pinout and Pin Description

Temperature analysis report

10. FCC Certification

Host Information

The host will Satisfy Class I or Class II permissive change based this module FCC ID.

The host will be electronic product that uses the BLE function of the GourmetBlue series BLE module.

FCC Statement

FCC standards: FCC CFR Title 47 Part 15 Subpart C Section 15.247

PCB antenna with antenna gain 0.0dBi

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Any Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

Note: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

We will retain control over the final installation of the modular such that compliance of the end product is assured. In such cases, an operating condition on the limit modular approval for the module must be only approved for use when installed in devices produced by a specific manufacturer. If any hardware modify or RF control software modify will be made by host manufacturer, C2PC or new certificate should be apply to get approval, if those change and modification made by host manufacturer not expressly approved by the party responsible for compliance, then it is illegal.

FCC Radiation Exposure Statement

The modular can be installed or integrated in mobile or fix devices only. This modular cannot be installed in any portable device.

This modular complies with FCC RF radiation exposure limits set forth for an uncontrolled environment. This transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.

If the FCC identification number is not visible when the module is installed inside another device, then the outside of the device into which the module is installed must also display a label referring to the enclosed module. This exterior label can use wording such as the following: "Contains Transmitter Module FCC ID: 2ATZI-8601 Or Contains FCC ID: 2ATZI-8601"

When the module is installed inside another device, the user manual of the host must contain below warning statements;

1. This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

(1) This device may not cause harmful interference.

(2) This device must accept any interference received, including interference that may cause undesired operation.

Note: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications.

However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

2. Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

The devices must be installed and used in strict accordance with the manufacturer's instructions as described in the user documentation that comes with the product.

Any company of the host device which install this modular with limit modular approval should perform the test of radiated & conducted emission and spurious emission, etc. according to FCC part 15C : 15.247 and 15.209 & 15.207, 15B Class B requirement, Only if the test result comply with FCC part 15C : 15.247 and 15.209 & 15.207, 15B Class B requirement, then the host can be sold legally.
