Test Report

Report No.: CQASZ20191101127E-01

Applicant: Shenzhen Shengkailong Innovation Technology Co., Ltd.

Address of Applicant: 201, Building B, No.353, Silian Road, Henggang Silian Community, Longgang District, Shenzhen

Equipment Under Test (EUT):

Product: Smart vacuum phone holder

All Model No.: JS1021, S1021A, JS1021B, JS1021C, JS1021D, JS1021E, JS1021F, JS1021G, JS1021H, JS1021I, JS1021J, JS1021K, JS1021L, JS1021M, JS1021N, JS1021O, JS1021P, JS1021Q, JS1021R, JS1021S, JS1021T, JS1021U, JS1021V, JS1021W, JS1021X, JS1021Y, JS1021Z

Test Model No.: JS1021

Brand Name: PFZ

FCC ID: 2AU35-JS1021SKL

Standards: 47 CFR Part 15, Subpart C

Date of Receipt: 2019-11-07

Date of Test: 2019-11-07 to 2019-11-14

Date of Issue: 2019-11-15

Test Result : PASS*

Tested By: Tom Chen
(Tom Chen)

Reviewed By: Sheek Luo
(Sheek Luo)

Approved By: Jack Ai
(Jack Ai)

* In the configuration tested, the EUT complied with the standards specified above.

The test report is effective only with both signature and specialized stamp. The result(s) shown in this report refer only to the sample(s) tested. Without written approval of CQA, this report can't be reproduced except in full.

4 General Information

4.1 Client Information

Applicant:	Shenzhen Shengkailong Innovation Technology Co., Ltd.
Address of Applicant:	201, Building B, No.353, Silian Road, Henggang Silian Community, Longgang District, Shenzhen
Manufacturer:	Shenzhen Shengkailong Innovation Technology Co., Ltd.
Address of Manufacturer:	201, Building B, No.353, Silian Road, Henggang Silian Community, Longgang District, Shenzhen

4.2 General Description of EUT

Product Name:	Smart vacuum phone holder
All Model No.:	JS1021, S1021A, JS1021B, JS1021C, JS1021D, JS1021E, JS1021F, JS1021G, JS1021H, JS1021I, JS1021J, JS1021K, JS1021L, JS1021M, JS1021N, JS1021O, JS1021P, JS1021Q, JS1021R, JS1021S, JS1021T, JS1021U, JS1021V, JS1021W, JS1021X, JS1021Y, JS1021Z
Test Model No.:	JS1021
Brand Name:	PFZ
Hardware Version:	XHD-3357
Software Version:	XHD-3357
Equipment Category	Non-ISM frequency
Operation Frequency range	110-205KHz
Modulation Type:	Induction
Antenna Type:	Induction coil
Antenna Gain:	0dBi
EUT Power Supply:	Input: DC, 5V-12V 2A, Output: 15W max
USB Cable:	94cm(Unshielded)

Note:

1. In section 15.31(m), regards to the operating frequency range less 1 MHz.
2. All model: JS1021, S1021A, JS1021B, JS1021C, JS1021D, JS1021E, JS1021F, JS1021G, JS1021H, JS1021I, JS1021J, JS1021K, JS1021L, JS1021M, JS1021N, JS1021O, JS1021P, JS1021Q, JS1021R, JS1021S, JS1021T, JS1021U, JS1021V, JS1021W, JS1021X, JS1021Y, JS1021Z

Only the model JS1021 was tested, since the electrical circuit design, layout, components used and internal wiring were identical for the above models, with difference being appearance bracket, model name and product color.

4.3 Test Environment

Operating Environment:	
Radiated Emissions:	
Temperature:	24.7 °C
Humidity:	52 % RH
Atmospheric Pressure:	1005mbar
Conducted Emissions:	
Temperature:	24.6 °C
Humidity:	46 % RH
Atmospheric Pressure:	992mbar
Radio conducted item test (RF Conducted test room):	
Temperature:	26 °C
Humidity:	49 % RH
Atmospheric Pressure:	1005mbar
Test Mode:	
Mode a:	Wireless charging Mode at 12V (Full load)
Mode b:	Wireless charging Mode at 12V (half load)
Mode c:	Wireless charging Mode at 12V (Null load)
Mode d:	Wireless charging Mode at 5V (Full load)
Mode e:	Wireless charging Mode at 5V (half load)
Mode f:	Wireless charging Mode at 5V (Null load)
Note: All mode were tested and found that mode a was the worst case and only the data of the worst case record in this report.	

4.4 Description of Support Units

The EUT has been tested with associated equipment below.

1) Support equipment

Description	Manufacturer	Model No.	Certification	Supplied by
Adaptor	Samsung	EP-TA50CBC	FCC	CQA
Wireless electronic Load	-	-	-	CQA

4.5 Statement of the measurement uncertainty

The data and results referenced in this document are true and accurate.

The reader is cautioned that there may be errors within the calibration limits of the equipment and facilities.

The measurement uncertainty was calculated for all measurements listed in this test report acc. to CISPR 16 - 4 „Specification for radio disturbance and immunity measuring apparatus and methods – Part 4: Uncertainty in EMC Measurements“ and is documented in the **Shenzhen Huaxia Testing Technology Co., Ltd.** quality system acc. to DIN EN ISO/IEC 17025.

Furthermore, component and process variability of devices similar to that tested may result in additional deviation. The manufacturer has the sole responsibility of continued compliance of the device.

Hereafter the best measurement capability for CQA laboratory is reported:

No.	Item	Uncertainty	Notes
1	Radiated Emission (Below 1GHz)	5.12dB	(1)
2	Radiated Emission (Above 1GHz)	4.60dB	(1)
3	Occupied Bandwidth	1.1%	(1)
4	Temperature test	0.8°C	(1)
5	Humidity test	2.0%	(1)

(1)This uncertainty represents an expanded uncertainty expressed at approximately the 95% confidence level using a coverage factor of k=2.

4.6 Test Location

Shenzhen Huaxia Testing Technology Co., Ltd,

1F., Block A of Tongsheng Technology Building, Huahui Road, Dalang Street, Longhua District, Shenzhen, China

4.7 Test Facility

- **A2LA (Certificate No. 4742.01)**

Shenzhen Huaxia Testing Technology Co., Ltd., Shenzhen EMC Laboratory is accredited by the American Association for Laboratory Accreditation(A2LA). Certificate No. 4742.01.

- **FCC Registration No.: 522263**

Shenzhen Huaxia Testing Technology Co., Ltd., Shenzhen EMC Laboratory has been registered and fully described in a report filed with the (FCC) Federal Communications Commission. The acceptance letter from the FCC is maintained in our files. Registration No.:522263

4.8 Deviation from Standards

None.

4.9 Other Information Requested by the Customer

5 Test results and Measurement Data

5.1 Antenna Requirement

Standard requirement:	47 CFR Part 15C Section 15.203
<p>15.203 requirement:</p> <p>An intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator, the manufacturer may design the unit so that a broken antenna can be replaced by the user, but the use of a standard antenna jack or electrical connector is prohibited.</p>	
<p>15.247(b) (4) requirement:</p> <p>The conducted output power limit specified in paragraph (b) of this section is based on the use of antennas with directional gains that do not exceed 6 dBi. Except as shown in paragraph (c) of this section, if transmitting antennas of directional gain greater than 6 dBi are used, the conducted output power from the intentional radiator shall be reduced below the stated values in paragraphs (b)(1), (b)(2), and (b)(3) of this section, as appropriate, by the amount in dB that the directional gain of the antenna exceeds 6 dBi.</p>	
EUT Antenna:	

The antenna is Induction coil. The best case gain of the antenna is 0dBi.

5.2 Conducted Emissions

Test Requirement:	47 CFR Part 15C Section 15.207		
Test Method:	ANSI C63.10: 2013		
Test Frequency Range:	150kHz to 30MHz		
Limit:	Frequency range (MHz)		Limit (dBuV)
			Quasi-peak Average
	0.15-0.5	66 to 56*	56 to 46*
	0.5-5	56	46
		5-30	60 50
* Decreases with the logarithm of the frequency.			
Test Procedure:	<ol style="list-style-type: none"> 1) The mains terminal disturbance voltage test was conducted in a shielded room. 2) The EUT was connected to AC power source through a LISN 1 (Line Impedance Stabilization Network) which provides a $50\Omega/50\mu\text{H} + 5\Omega$ linear impedance. The power cables of all other units of the EUT were connected to a second LISN 2, which was bonded to the ground reference plane in the same way as the LISN 1 for the unit being measured. A multiple socket outlet strip was used to connect multiple power cables to a single LISN provided the rating of the LISN was not exceeded. 3) The tabletop EUT was placed upon a non-metallic table 0.8m above the ground reference plane. And for floor-standing arrangement, the EUT was placed on the horizontal ground reference plane. 4) The test was performed with a vertical ground reference plane. The rear of the EUT shall be 0.4 m from the vertical ground reference plane. The vertical ground reference plane was bonded to the horizontal ground reference plane. The LISN 1 was placed 0.8 m from the boundary of the unit under test and bonded to a ground reference plane for LISNs mounted on top of the ground reference plane. This distance was between the closest points of the LISN 1 and the EUT. All other units of the EUT and associated equipment was at least 0.8 m from the LISN 2. 5) In order to find the maximum emission, the relative positions of equipment and all of the interface cables must be changed according to ANSI C63.10: 2013 on conducted measurement. 		
Test Setup:	 <p>The diagram illustrates the test setup within a 'Shielding Room'. A 'Test Receiver' is connected to a 'Ground Reference Plane' via a LISN 2. A LISN 1 is connected to the AC Mains and to the 'EUT' (Equipment Under Test) and an 'AE' (Antenna Equipment) which is connected to the 'EUT'. The 'EUT' and 'AE' are placed on a table 0.8cm above the 'Ground Reference Plane'. The 'EUT' is 0.4m from a vertical 'Ground Reference Plane' which is bonded to the 'Ground Reference Plane'. The LISN 1 is 0.8m from the 'EUT' and is also bonded to the 'Ground Reference Plane'.</p>		
Test Results:	Pass

Note: 15.35(b), Unless otherwise specified, the limit on peak radio frequency emissions is 20dB above the maximum permitted average emission limit applicable to the equipment under test. This peak limit applies to the total peak emission level radiated by the device.

Test Setup:

Figure 1. Below 30MHz

Figure 2. 30MHz to 1GHz

Figure 3. Above 1 GHz

Test Procedure:

- 1) Below 1G: The EUT was placed on the top of a rotating table 0.8 meters above the ground at a 3 meter semi-anechoic chamber. The table was rotated 360 degrees to determine the position of the highest radiation.
2) Above 1G: The EUT was placed on the top of a rotating table 1.5 meters above the ground at a 3 meter semi-anechoic chamber. The table was rotated 360 degrees to determine the position of the highest radiation.
Note: For the radiated emission test above 1GHz:
Place the measurement antenna away from each area of the EUT determined to be a source of emissions at the specified measurement distance, while keeping the measurement antenna aimed at the source of emissions at each frequency of significant emissions, with polarization oriented for maximum response. The measurement antenna may have to be higher or lower than the EUT, depending on the radiation pattern of the emission and staying aimed at the emission source for receiving the maximum signal. The final measurement antenna elevation shall be that which maximizes the emissions. The measurement antenna elevation for maximum emissions shall be restricted to a range of heights of from 1 m to 4 m above the ground or reference ground plane.
- The EUT was set 3 meters away from the interference-receiving antenna, which was mounted on the top of a variable-height antenna tower.
- The antenna height is varied from one meter to four meters above the ground to determine the maximum value of the field strength. Both horizontal and vertical polarizations of the antenna are set to make the

	measurement. d. For each suspected emission, the EUT was arranged to its worst case and then the antenna was tuned to heights from 1 meter to 4 meters (for the test frequency of below 30MHz, the antenna was tuned to heights 1 meter) and the rotatable table was turned from 0 degrees to 360 degrees to find the maximum reading. e. The test-receiver system was set to Peak Detect Function and Specified Bandwidth with Maximum Hold Mode. f. If the emission level of the EUT in peak mode was 10dB lower than the limit specified, then testing could be stopped and the peak values of the EUT would be reported. Otherwise the emissions that did not have 10dB margin would be re-tested one by one using peak, quasi-peak or average method as specified and then reported in a data sheet. g. Repeat above procedures until all frequencies measured was complete.
Test Results:	Pass

Radiated Emission below 9K~30MHz	
the worst case	
Test mode:	Mode a

Frequency MHz	Polarization	Reading dB(uV)	Factor dB (1/m)	Level dB(uV/m) Peak	Limit dB(uV/m) Average	Margin dB	Pass/Fail

5	262.90	32.93	10.51	43.44	46.00	-2.56	QP	HORIZONTAL
6	958.79	18.83	21.99	40.82	46.00	-5.18	QP	HORIZONTAL

Remark:

The field strength is calculated by adding the Antenna Factor, Cable Factor & Preamplifier. The basic equation with a sample calculation is as follows:

Final Test Level = Receiver Reading + Antenna Factor + Cable Factor

6 Photographs - EUT Test Setup

6.1 Radiated Emission

Test Model No.: JS1021

9KHz~30MHz:

30MHz~1GHz:

6.2 Conducted Emission

7 Photographs - EUT Constructional Details

Test Model No.:JS1021

The End
