RE: Equipment class change from DXT to DXX

To Whom It May Concern:

This certification filing began with a 2.933 change in ID application based upon an original filing from 2015 during which time equipment class DXT was applicable. At the time of filing of FCC ID: 2AUPP-VUAI01, the EAS system continued to accept DXT applications. Following what was considered current FCC procedures at the time, an exact copy of the original certification was filed for this applicant under equipment class DXT. The subsequent PCII application for modification was also filed, following FCC policy and retaining same equipment class.

Since the time of original filing, equipment class DXT has been expired and is no longer available on the FCC Equipment Authorization system. In order to file subsequent modification (2.1043 PCII) application, there must exist a prior application with the exact equipment class listed. Since this product is non-composite, a new filing for the updated equipment class could not be filed. Therefore, a modification of equipment class became necessary.

As of this date, all applications have been requested for update from original equipment class DXT to current equipment class DXX.

Should you have any questions or require clarification, please feel free to contact us.

Thank you,
