

L120 Basic 3D PRINTER

USER OPERATING INSTRUCTIONS

Suzhou Dazzle 3D Printing Technology Co.,Ltd.

Disclaimer

All product, product specifications and data are subject to change without notice for improved reliability, functionality, design or other reasons.

Any of the errors, inaccuracies or incompleteness of any product related data sheets or other published materials, Suzhou Dazzle 3D Printing Technology Co.,Ltd. and its affiliates, agents and employees, and all individuals representing the company (collectively referred to as "Dazzle"), does not assume any and full responsibility.

Dazzle does not warrant, represent or guarantee the suitability of the product for its specific use or the continuous production of any product. To the fullest extent permitted by applicable law,Dazzle does not assume (i) any and all liability arising out of the application or use of any product, and (ii) includes but is not limited to any and all liability arising out of the particular, joint or incidental damages, and (iii) No implied warranties of any kind, including implied warranties of fitness for a particular purpose, non-infringement and merchantability.

The statement about the application of the product to a certain type of application is subject to the typical requirements of the general application environment of Dazzle. There is no association between such claims and the applicability claims for product-specific applications. It is the customer's responsibility to certify that a particular product is suitable for a particular application based on the product's technical specifications. The parameters provided in the data sheet and / or technical specifications may vary from application to application and performance may vary over time. All operating parameters, including typical parameters, must be confirmed by the customer's technical experts based on each application environment. Product specifications are not extended or otherwise modified by Dazzle Manufacturing's terms and conditions of purchase, including but not limited to the stated warranty conditions.

Unless stated in writing, Dazzle products are not intended for use in medical, ambulance or life support, or other applications where failure of a major product may result in personal injury or death. Customer use or sale of products that are not expressly indicated for use in the above applications are at your own risk. To obtain written terms and conditions for the products specified for the above applications, please contact the authorized personnel of the company.

Nothing in this document or any cause of Dazzle grants any intellectual property rights, express or implied, by estoppel or otherwise. Product names and logos mentioned herein may be trademarks of their respective owners.

I Introduction

• L120 Basic introduction

• Accessories introduction

Name	Usage	Name	Usage
① Network cable	To connect printer and computer	⑦ Polishing sand paper	To polish the support points
② Power adaptor	DC power supply	⑧ Cleaning bottle	To clean the resin on the surface of model
③ Resin tank	Printing material container	⑨ Cleaning tank	To soak models
④ Forming platform	Platform for model forming	⑩ Stainless scraper	To remove the model after printing finished
⑤ Disposable filter	To filter the residue in resin	⑪ Disposable gloves	To keep hands clean during aftertreatment
⑥ Scraper	To clean the residue in resin tank	⑫ Tooling frame	To change the release film

Please download software from: www.dazz-3d.com

II Device connection

- LAN connection

Connect the printer with power
Connect the printer with network cable

Click "Network & Internet setting"

Choose the LAN connected and click the right button
and choose "Properties"

Click "Change adaptor setting" in LAN setting

Double click IPv4 for network setting

Setting the IP as showed in picture and click "Confirm"

Open the software, if the printer is in the device list, then connection succeeds.

• WIFI connection

Click "System setting" on the touch screen

In network setting interface, click "Current network" for network setting

Input WIFI password and click "Confirm"

Choose WIFI network and click "Connect"

WIFI setting succeed when "Connected " shows on the top.

(Tips: wait 10 seconds after input password. When the WIFI signal is not good, try more,)

III Start printing

Connect the printer with PC.
(See the instruction "Device connection" in Part II)

Open the cover box

Loosen the clip on the holder and descend the holder to the bottom. Close the cover when resin flow out of the cap.

Get a resin bottle and change into automatic fill-in cap
Assemble the bottle to the holder on the right side.

Build new project in software DDStarter

Lead in model for printing.

Choose printer.

Model layout.

(Tips: Pay attention to the resin parameter. Read "Configuration setting" in part V if you need to revise the parameter.)

Click "Upload scenario content"

Choose layer thickness and name the task.

Wait for slicing completed.

Start printing. Check the printing progress in control panel.

IV Post-curing

- Clean the model

Open the cover box.

Take out the forming platform

(Tips: Turn the forming platform 90 degree and hang it on the arm to dry it before take it out.)

Clean the model with 95%-99.9% ethanol (alcohol)
(Tips:Postcure the model as required)

Take the model out with shovel from the forming platform.

Postcure the model in postcure oven
(Tips:Models could be solidified in sunshine.
Post-processing procedure is different from
different resin.)

Remove the supports when model is dry

- Clean the resin tank

Take the automotive fill-in holder up.

Take out the scraper.

Loosen the screws on the two sides of resin tank.
Clean the resin tank with alcohol.

V Parameter setting

- Apply parameter packet

Open device control panel and click "Resin list"

Choose printing data package

(Tips: The data package should match the resin)

- Adjust parameter packet

Choose the parameter packet

Click "Edit" for resin parameter editing

Revise the parameter

Click "Save"

• Add parameter packet

Adjust printing parameter under the instruction

Rename the adjusted Parameter packet and save

- Delete parameter packet

Choose the packet

Click "Delete"

(Tips: Please save at least one packet)

VI Scrapper setting

- Scrapper introduction

A scrapper device is installed in L120 Pro printer. The device is for preventing sedimentation and improving printing quality. Sedimentation happens when resin be in the tank over-night. For some special material, such as resin with ceramic powder, scrapper is necessary for preventing sedimentation. The move speed and frequency can be set by users. When the scrapper starts working, the forming platform will raise 45mm at least or the scrapper and forming platform will interfere with each other. Before take out the resin tank, please take out scrapper first.

- Attention

After using the scrapper, the printing time will be longer for the raising of forming platform. A layer line will be obvious where the scrapper works. You could choose not to use the scrapper except for the special resin we suggest using scrapper in instruction.

- Parameter setting

The screenshot shows a window titled "Resin Editor" with a standard Windows-style title bar (minimize, maximize, close buttons). The window is divided into several sections:

- Resin Editor**: The main title of the window.
- Resin Name**: A text input field containing "DIC-603".
- Resin Description**: A text input field containing "1120 High Wax".
- Resin Print Configs**: A section containing a list of parameters and their descriptions, organized into two columns.
 - Parameters (Left Column):**
 - `[0.05]`
 - `antiEnable=false`
 - `antiGrayMax=255`
 - `antiGrayMin=0`
 - `lightDelayTime=4000`
 - `lightDelayTimeInit=6000`
 - `lightExposureTime=5000`
 - `lightExposureTimeInit=35000`
 - `lightInitLayers=5`
 - `lightStrong=1500`
 - `motorDownDistance=153000`
 - `motorDownSpeed=800`
 - `motorUpDistance=3500`
 - `motorUpSpeed=800`
 - `offset=0`
 - `offsetEnable=false`
 - `offsetXYEnable=false`
 - `offsetx=0`
 - `offsety=0`
 - `scraperAdvanceDistance=7000`
 - `scraperAdvanceSpeed=200`
 - `scraperBackDistance=7100`
 - `scraperBackSpeed=200`
 - `scraperDelayTime=6000`
 - `scraperEnable=true`
 - `scraperFirstEnable=true`
 - `scraperGapNumber=1`
 - `scraperHeight=45000`
 - `scraperTimes=1`
 - Descriptions (Right Column):**
 - Start anti-aliasing algorithm. Value is true(on) or false(off).
 - Maximum anti-aliasing grey value, range 0-255.
 - Minimum anti-aliasing grey value, range 0-255.
 - Waiting time for each layer(us).
 - Waiting time for the first layer(us).
 - Exposure time(us).
 - Exposure time for the first layer(us).
 - Layer quantity for first exposure(10-20 is suggested to improve success rate).
 - Light power(0-1500 for reference).
 - Total travel distance for Z axis motor(um).
 - Descending speed for motor(800-1000 for reference).
 - Raising height of forming platform when printing each layer.
 - Ascending speed for motor(800-1000 for reference).
 - Shrinkage of model(s).
 - Start model shrink. Value is true(on) or false(off).
 - Start XY axis dimension compensation. Value is true(on) or false(off).
 - Compensation for X axis dimension.
 - Compensation for Y axis dimension.
 - Forward distance of scraper. 7000-7200 for reference.
 - Forward speed of scraper. 100 for reference. Resin may flow out when scraper moves too fast.
 - Backward distance of scraper. 100+forward distance for reference.
 - Backward speed of scraper. 100 for reference. Resin may flow out when scraper moves too fast.
 - Waiting time for exposure after scraper stops moving(us).
 - Start scraper. Value is true(on) or false(off).
 - Start scraper before printing. Value is true(on) or false(off).
 - Gap layer amount for scraper moving.
 - Raising height of forming platform when scraper moving(um,45000 at least).
 - How many round trip for one scraper movement.

At the bottom of the window, there are two buttons: "Save" and "Cancel".

FCC Statement

This device complies with Part 15 of the FCC rules. Operation is subject to the following two conditions: 1) this device may not cause harmful interference, and 2) this device must accept any interference received, including interference that may cause undesired operation.

Note: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

FCC Radiation Exposure Statement

This device complies with FCC RF radiation exposure limits set forth for an uncontrolled environment. This transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.

This device must operate with a minimum distance of 20 cm between the radiator and user body.

ISED Statement

English: This device complies with Part 15 of the FCC Rules [and contains license-exempt transmitter(s)/receiver(s) that comply with Innovation, Science and Economic Development Canada's licence-exempt RSS standard(s)]. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

The digital apparatus complies with Canadian CAN ICES-3 (B)/NMB-3(B).

-French: L'émetteur/récepteur exempt de licence contenu dans le présent appareil est conforme aux CNR d'Innovation, Sciences et Développement économique Canada applicables aux appareils radio exempts de licence. L'exploitation est autorisée aux deux conditions suivantes:

-(1) l'appareil ne doit pas produire de brouillage, et

-(2) l'appareil doit accepter tout brouillage radioélectrique subi, même si le brouillage est susceptible d'en compromettre le fonctionnement.

l'appareil numérique du ciem conforme canadien peut - 3 (b) / nmb - 3 (b).

This device meets the exemption from the routine evaluation limits in section 2.5 of RSS 102 and compliance with RSS 102 RF exposure, users can obtain Canadian information on RF exposure and compliance.

cet appareil est conforme à l'exemption des limites d'évaluation courante dans la section 2.5 du cnr - 102 et conformité avec rss 102 de l'exposition aux rf, les utilisateurs peuvent obtenir des données canadiennes sur l'exposition aux champs rf et la conformité.

This equipment complies with Canada radiation exposure limits set forth for an uncontrolled environment.

This equipment should be installed and operated with minimum distance 20cm between the radiator & your body.

Cet équipement est conforme Canada limites d'exposition aux radiations dans un environnement non contrôlé.

Cet équipement doit être installé et utilisé à une distance minimale de 20 cm entre le radiateur et votre corps.
