

Installation Guide

The installation is quite simple, just need to fasten the 2 screws on the device to the cage, then it is ready for the usage.

1st screw

2nd screw

The ready combo: the camera and the cage, let the entrance open.

If an animal comes in and touched the trigger panel, the door will close, then the camera will take a photo and send info to the server automatically by the Reed sensor inside, the user is not required to nearby and the distance can definitely exceed 20cm, actually the camera can be set anywhere you want.
