

# Quick Start Guide

## STEP 1

Place the charger on a flat surface against a wall and near a power outlet. Make sure the area surrounding the charger is clear of small items and furniture.

## STEP 2

Plug one end of the power cable into the back of the charger, then the other end into the outlet.

## STEP 3

Place Astro in front of the charger, facing away from the wall. Use the white areas of the base to gently roll it backwards onto the charger until it clicks into place. The logo will appear on screen as Astro powers up.

## Get device ready to roll

### STEP 1

Make sure you have the login info ready for your wifi network and Amazon account.

### STEP 2

Follow the on-screen instructions. You'll start by introducing Astro to yourself and the people who spend the most time in your home. Then, you'll pair Astro with the app and spend about 30 minutes helping it learn about your home.

### TIP

If you need to pause setup, make sure to roll Astro back onto the charger before you leave.
