

### What are the functions of Count cutting?

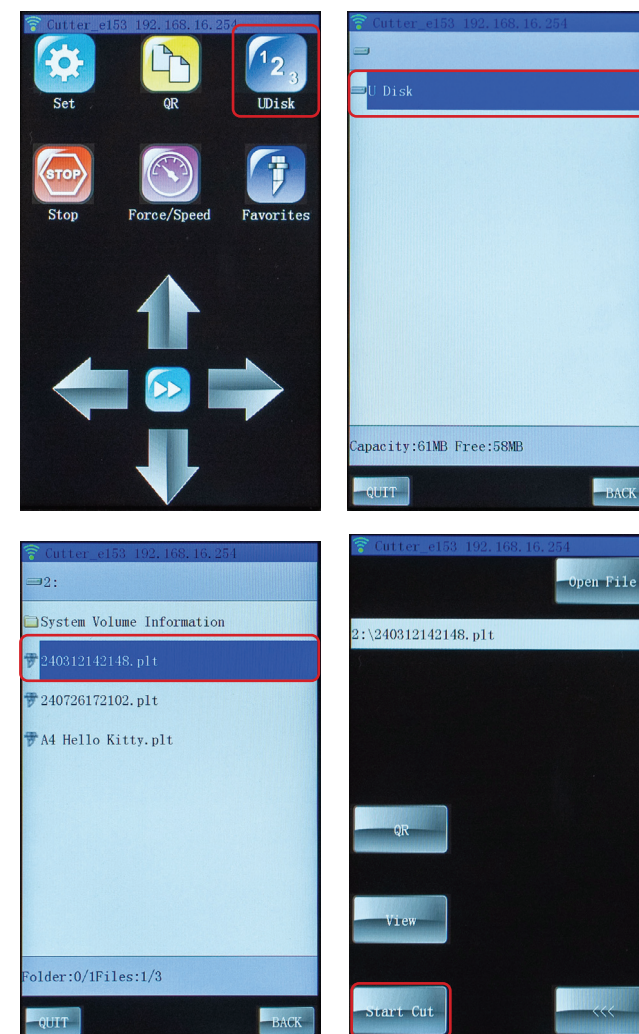

If you set "Unlimited" it will keep cutting until all the material is cut;

If you place 20 sheets of paper and set the number of cuts to 10, the machine will cut 10 sheets and stop automatically.

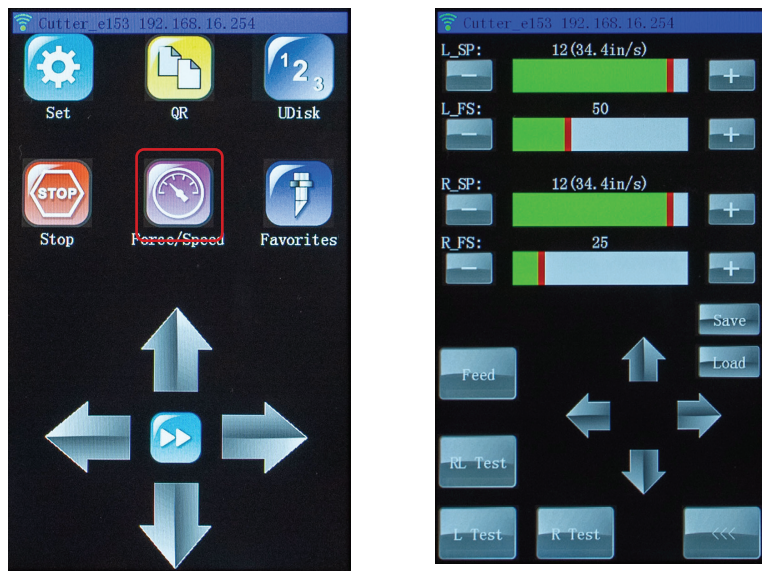

System Information Page; Please take a photo of this page if your machine malfunctions and send it to us.

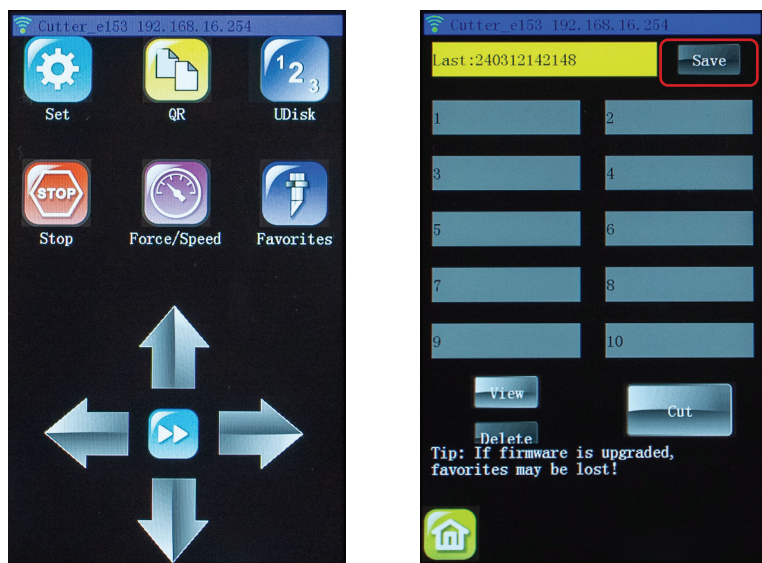

### How to manually find USB drive sector files?

How to set machine blade pressure and speed?

How to set up cut the file favorites page? Just click on "Save".

QR document Automatic cutting

If there is a printed QR code on the file, just click the QR button, and the machine will scan the QR code and automatically match the corresponding cutting file for cutting.

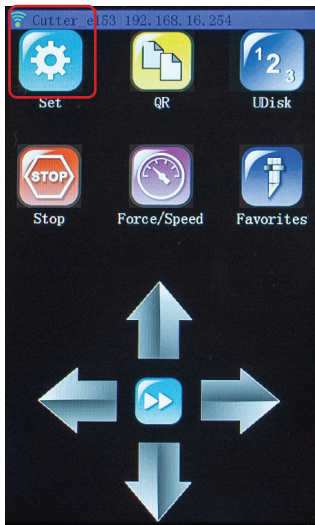

When the marking points cannot be found during scanning or the deviation is too large during cutting, advanced calibration of the machine is required. The calibration steps are as follows:

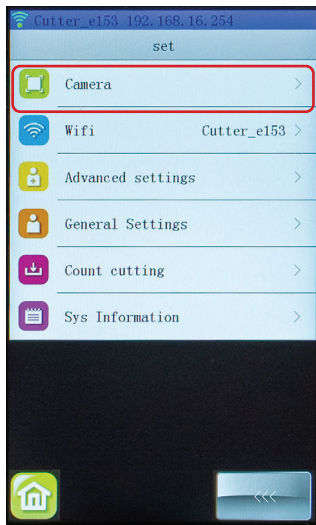

1

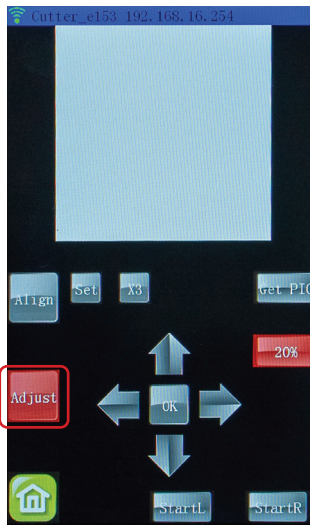

2

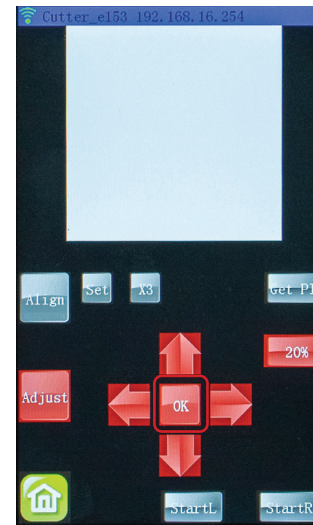

3

4

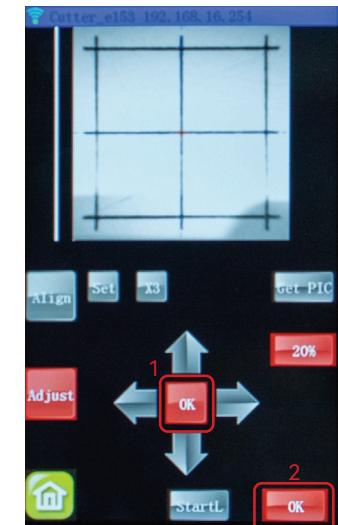

5

Press and hold the OK button until all the four direction buttons turn red. Then click the OK button and the machine will start to draw four squares for calibration.

6

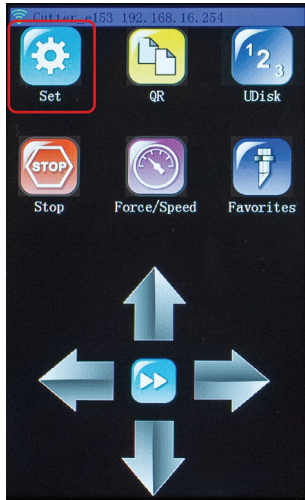

1. Align the red cross with the exact center of the square using your finger, and then click the OK button in the middle of the direction keys. The machine will complete the calibration automatically.

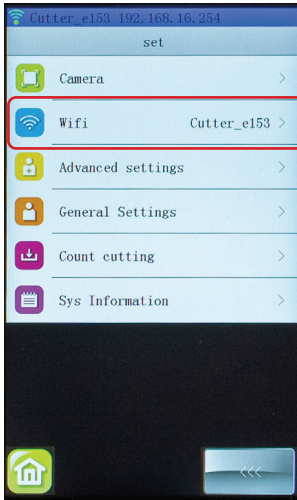

2. If recalibration is needed, please click the red OK button at the bottom right corner to carry out the calibration again.
