A black, rectangular electronic device, possibly a small case or module, is shown from a top-down perspective. It has a slightly raised lid with a small latch in the center. On the front face, there are two gold-colored, hexagonal connectors, likely SMA or similar, spaced apart. The device is placed on a white background with a light gray grid pattern. The grid has numerical labels along the top and left edges, ranging from 0 to 26 horizontally and 1 to 16 vertically.
