Function Description:

Launch:

- 1. Power supply 3V to 2.4G main control chip, crystal oscillator to 2.4G main control to provide external frequency.
- 2. Before operation, after operation, left and right functions are coded by the master control, the signal is modulated and amplified by 2.4G, and then transmitted by the antenna.

Frequency Range2405-2475MHz

Frequency list

Channel	Frequency (MHz)
1	2405
2	2440
3	2475
