RE: FCC Label Placement - FCC ID: 2AW4U-DT1104-0100

To whom it may concern,

The DT1104-0100 has an FCC label placed on the inside of the battery compartment.

The decision to place the FCC label on the inside of the battery compartment was made to ensure that the FCC label could never be removed or misplaced from the device.

The design of the enclosure does not provide any other places upon the enclosure that are not removeable. For example, the cover of the battery enclosure can be unclipped from the device which separates the FCC label from the device.

The custom enclosure was also designed with raised logos on the exterior that did not allow for FCC label placement on the exterior of the device.

The top of device includes a button and feedback LEDs that do not allow for FCC label placement.

The device includes batteries that need to be installed by the user before operating the device. The FCC label is visible to all users upon installation of the batteries.

Regards,

Mike Cruse
