

PJAMA BEDWETTING ALARM

BUTTON DIAGRAM AND FEATURES ALARM UNIT

	Volume
	On/Off
	Select sound

INSTRUCTION

For best results: The child should be motivated and want to get dry. The parent needs to help the child to wake up, especially at the beginning of the treatment.

NOTE: Charge the alarm unit before use. Use the supplied USB cable. The sensor does not need to be charged and is already paired with the alarm unit.

Charging via:	Time - fully charged
Computer	4-6 hours
AC Adapter 5V 1.0A	3 hours

During charging, a red LED light flashes. When charging is complete, the red LED light will light constantly.

1. Turn on the alarm by pressing the button. An LED light flashes to the left of the button and you will hear a beep (five times) indicating that the alarm is activated.
2. Press the button and select one of the seven different alarm sounds. The last played sound will be the sound alarming.
3. Adjust the volume with the button.

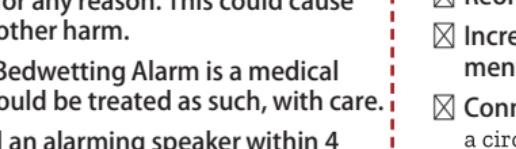

4. Place the alarm unit in the desired location in the room. To test the alarm unit, short the contacts on the sensor using a metal object (see picture below). Range of alarm about 10m.

5. Attach the sensor to the buttons located in the pocket on the inside of the Pjama pants. Make sure it is securely fastened. The alarm is now ready to use.

6. Press the button to turn off the alarm.

7. Unplug the sensor from Pjama pants when the alarm is not being used or when the Pjama pants are to be washed. Wipe off the sensor if it is wet.

For more information, see www.pjamastore.com/product-manuals

Short-circuit the contacts on the sensor using a metal object such as scissors.

FCC Statement

This device complies with part 15 of the FCC rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation. Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

NOTE: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and the receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

The device has been evaluated to meet general RF exposure requirement. The device can be used in portable exposure condition without restriction.
