We (Zhuhai Xprinter Electronics Technology Co., Ltd.) hereby state that all the models are electrically identical, including the same software parameters and hardware designs (such as circuit design, PCB layout, RF module/circuit, antenna type and antenna position, components on the PCB, etc.), the same mechanical structure and design (including product casing, materials, etc). The difference is merely the difference in model.

Note:

1. All models can use all product names,
 2. All models can be equipped with Motherboard 1 or Motherboard 2,
 3. all models can be equipped with Battery 1 or Battery 2,
 4. all models can be equipped with Shell 1 or Shell 2.
- please refer to the following figure.

Model Difference 1:

Battery 1

Battery 2

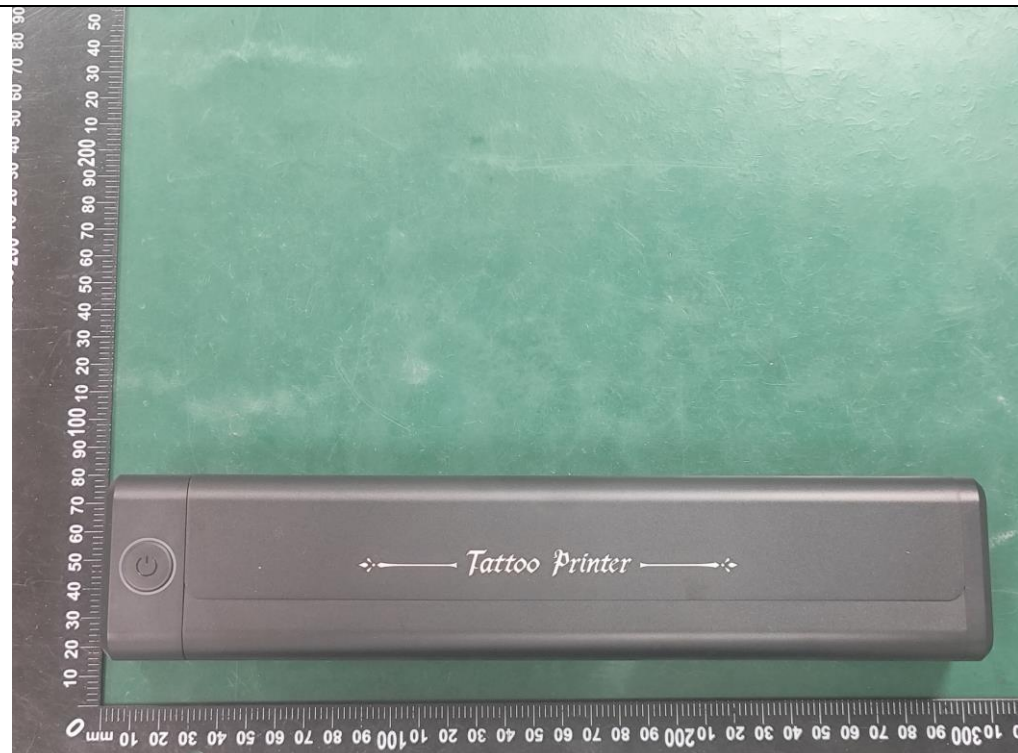

This Tattoo template printer has two batteries. Battery 1 has a capacity of 2000mAh and Battery 2 has a capacity of 1500mAh. The only difference between them is the capacity, while the input specification parameters are the same, so it does not affect the radio frequency function.

Model Difference 2:

Shell 1

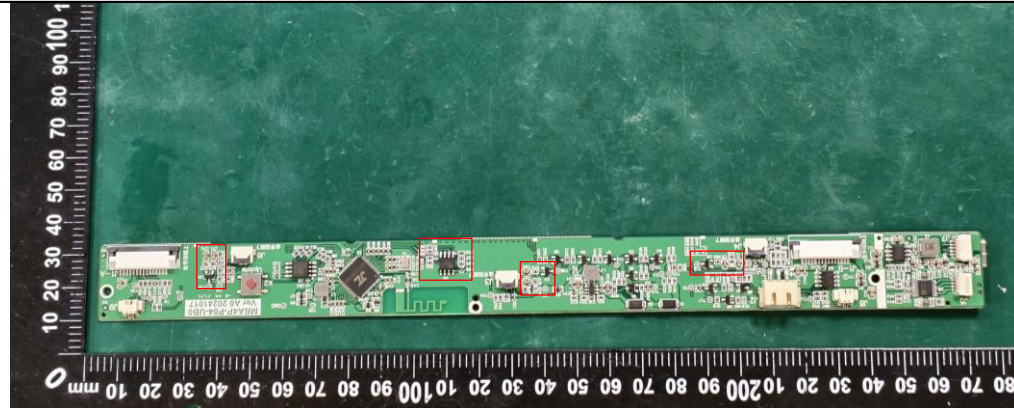

Shell 2

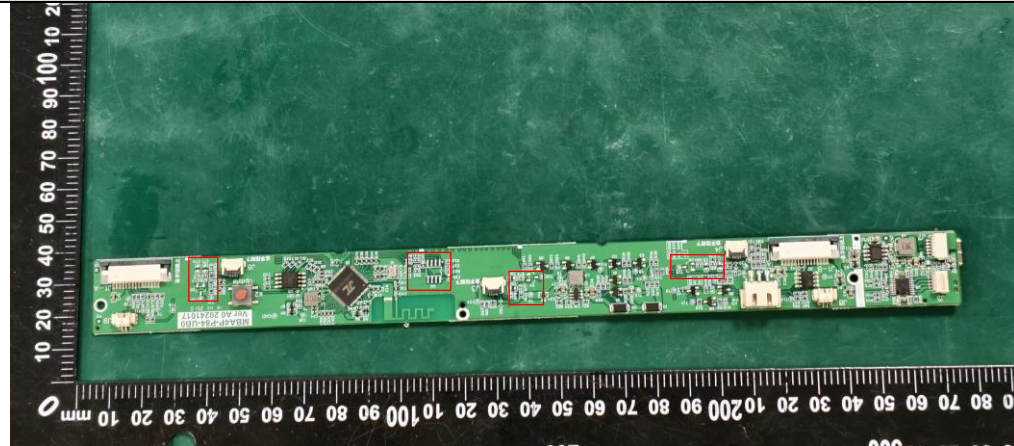

This Tattoo template printer comes in two types of enclosures. The dimensions of Enclosure 1 and Enclosure 2, as well as the circuit board hardware and software used inside, are the same. The only difference lies in the patterns and lines on their exteriors.

Model Difference 3:

Motherboard 1

Motherboard 2

This Tattoo template printer has two mainboards, namely Mainboard 1 and Mainboard 2. The main difference between them lies in the components within the red box in the picture, which can be optionally installed. The principle hardware and software of these two circuit boards are the same. Due to the differences between Mainboard 1 and Mainboard 2, both of these mainboards were tested in this experiment. The report only presents all the test data of Mainboard 1 and the interference radiation test data of Mainboard 2. (Please refer to the test report for details.)
