1. Introduction

Thanks for buying YoLuke Security IP Camera. This manual describes all the parameters, functional structures, usage, common problems and solutions for the cameras in detail. This would help you know the camera quickly and use it easily.

If you have any problems with our camera or confused in the settings, please contact with us, and we will provide technical support and service at the first time.

2. Installation

Rotate the base to the position of the arrow and remove it from the tail line. Determine the location of the mounting screw holes on the ceiling. Drill holes in the determined position and drive the expansion screw into it.

Place the three rounds at the bottom of the PTZ camera at the bottom of the PTZ camera at the bottom of the PTZ camera, and then turn left to the far left. Insert the base into the tail line and lift it with the camera, then insert the screw into the expansion screw.

1. Place the camera in a fixed position first, and mark the screw hole with a marker. Use a tool such as a drill to drill holes in the marked screw holes.

2. After screwing the hole, insert the plastic expansion bolt into the screw hole.

3. Align the screw hole on the bottom of the camera bracket with the hole on the wall. Screw in the screw to fix the camera.

4. The installation is complete.

3. SD Card Slot

4. APP Download

Download APP “CamHipro” or “CamHi” in Google Play or Apple Store, or scan the QR Code to install.

Software Overview:

Camhi Pro APP is a tool for managing network cameras, which can realize the functions of monitoring the images of network cameras on the LAN and the Internet on the mobile phone. The APP supports LAN search to add ID numbers and manually enter camera ID numbers, supports sound waves, AP configures WIFI, supports adding low-power consumption devices and sharing devices, device add, delete, and edit functions, supports audio monitoring and intercom, supports snapping pictures to the mobile phone, support image quality level settings, support remote download video files and other functions.

5. Mobile APP CamHipro Connection

5.1 Connect the Camera by Network cable

Install the APP, connect the mobile phone to the WIFI network, enter the APP and click the Add Device button to enter the Add Device interface. Choose different adding methods according to different types of cameras, because common IP cameras cover various adding methods. The following adding instructions are based on IP cameras.

Step 1

Step 2

Step 3

Step 4

Step 5

Step 6

Step 7

Step 8

Step 9

5.2 Connect to IP Camera Hot-Spot and then Configure Wi-Fi

Go to your cell phone's Wi-Fi Setting -- search Wi-Fi signals -- connect the Wi-Fi.

The name of Wi-Fi Hot Spot is the UID on the camera (Wi-Fi name: IPCAM-900139)

Camera default Wi-Fi Hot Spot password: **01234567**

Remark: Only when the mobile phone is 3-5 meters away from the camera can the hot spot signal be detected, please close the mobile data when connect the camera Hot Spot.

5.3 Add Camera

Add your camera to 'CamHippo' APP follow the steps of the below pictures.

Step 1

Step 2

Step 3

5.4 Wi-Fi Setting

Set Wi-Fi for your camera with the your Router's Wi-Fi, follow the steps below:

5.5 Connect the Camera by Search Nearby Devices

A) Connect the camera to the power supply and the camera would turn into self-test mode, which would take about 15 seconds. Open the 'CamHipro' APP.

B) Add the camera by Search Nearby Devices follow the below steps.

Note:

1. Please make sure that the camera has been connected to router's Wi-Fi.
2. Please make sure that your cell phone connects the same Wi-Fi as the camera connected.
3. If there is no camera on the device list, please come close to the camera and refresh.

Step 4

Step 5

Step 6

5.6 Mobile APP Function Introduction

5.6.1 Micro SD Card Video files playback and download

Opps:if you download the recorded video files from pc,then the files can only be played in hiplayer.

5.6.2 Local files, device list and add other new camera

Click  to view the local file of different cameras. ; click **Camera**  to change the camera device list ; click  to add a new camera.

5.6.3 Pre-set point and auto cruise (For PTZ)

Click the camera into real-time monitor -- turn to next page -- preset position

Remarks: HD is a higher-definition display effect than SD (recommended to use when the network is good)

Auto Cruise Function:

Number 1-16 means 16 points you want to set up

Adjust the camera rotation to the first point you want to monitor on the app; input "1" and Setting;

Adjust the camera rotation to the second point you want to monitor on the app; input "2" and Setting;

.....until set up 16 points.....

After you set up 16 points, input "41" and transfer. The camera will auto cruise.

Input "41" and Setting, auto cruise will stop

5.6.4 Change password

Click “Change Password” to modify the password. Old password:admin

Change Password

application

5.5.5 Set factory of the camera

5.6.6 Alarm management and notification

Recording and alarm, default recording all day; APP push is off by default; Recording time period and alarm time period can be customized

5.6.7 Motion Detection

5.6.8 Email settings

5.6.9 FTP setting

5.6.10 Video setting and audio setting

5.6.11 SD card plan recording

Need to change the camera time to the local time zone first

5.6.12 Device time setting

5.6.13 SD card setting

The files in the SD card cannot be deleted to keep the playback function coherent, the SD card will automatically overwrite the earliest recording

5.6.14 Default setting

6. Computer Browsing Access

6.1 Download Search Tool

Download Software from the website (<http://www.gentlen168.com/security-camera/info/898.html>) or Mini CD in the package, open the file and install search tool in your computer. Click “next” to find IP camera. Also You can select Network Card to search IP Camera.

Note: Through the search tool you can find all IP camera in your local area network, and can modify the basic co

You can also access the camera through the browser (recommended IE browser), in the browser you can test the camera and configure all the settings of the camera.

6.2 Search IP Camera

Click “next” to find IP camera. You can select Network Card to search IP Camera.

[illegible]

6.3 View Video by Browser

Support IE, Google and Firefox browser, Install ActiveX before view video.

6.4 Interface

Region A		Multiple preview modes.
Region B		View memory card capacity and date.
		Click on the capture and take the current image.

		Local manual recording.
		Video Recording playback: Click the playback, select the date and time, select the local playback or SD card playback, search the video files and double click on the file to play.
Region C		PTZ control operation interface, control the camera to rotate horizontally and vertically.
		Control the camera zoom in/out, focus +/-, left / right and up / down cruise.
		Adjust the camera rotation speed and presetting point settings: Select presetting point 1, the camera rotates to the screen you want to monitor, click on the setting to set the preset point. Type 41 in Presetting to call the command of auto cruise.

OSD Set: Set time stamp, time show, camera name and name show in this interface.

Image: Adjust the brightness, saturation, contrast, exposure parameter and set the WDR, Aemode, Imgmode, Intelligent night mode, IR LED Control, IRCut in this interface. (The camera does not support full colour night vision and smart night vision currently.)

Audio: Audio type support G711 / 726 protocol, audio stream selection on/off, audio input type selection, input / output volume adjustment

6.5.2 Setting→Network

Network: The IP address can be selected manually settings or automatically obtain. The DNS also can be selected manually or automatically.

The screenshot shows the 'IP CAMERA' web interface with the 'Settings' tab selected. On the left sidebar, the 'Network' section is expanded, showing options like Network, Wireless, Ddns, Platform, ONVIF, and P2P. The 'LAN Settings' section is active, displaying fields for IP Configuration Type (Fixed IP Address), IP address (192.168.1.114), Subnet mask (255.255.255.0), Gateway (192.168.1.1), DNS Configuration Type (Manual DNS), Primary DNS (116.116.116.116), and Secondary DNS (221.5.88.88). Below this, the 'HTTP&RTSP' section shows ports for HTTP (80), RTSP (554), and RTMP (1935), along with a checkbox for 'RTSP Permission check' which is currently 'Off'. 'Apply' and 'Cancel' buttons are at the bottom right.

Wireless: Enable Wireless to search and select the wireless network that you want to add, input password. Click the “check” to verify camera if connected to the wireless signal.

The screenshot shows the 'IP CAMERA' web interface with the 'Settings' tab selected. On the left sidebar, the 'Network' section is expanded, and the 'Wireless' option is selected. The 'Wireless' settings section is active, showing 'Enable Wireless' (On), 'SSID' (JDKJ6688), 'Security mode' (WPA-PSK), 'WPA Algorithm' (AES), 'Key' (masked with dots), and 'Re-type key' (masked with dots). There is a 'search' button next to the SSID field and a 'check' button for 'Check Wireless Setup'. 'Apply' and 'Cancel' buttons are at the bottom right.

DDNS: To set up DDNS (Remote access), requesting an dynamic domain name to fill in the username and password which provided by Service provider. Contact us to get the cam ID number, each camera username and password will be different. Also you could use a third-party domain name to set it up.

Platform: this function was replaced by P2P, please use P2P to complete your setting.

ONVIF: Set the Server Port, Preview, Time zone Setting, Image Setting, NVC Type in this interface.

P2P: Enable this function, can watch video in Mobile App via add UID Number.

6.5.3 Setting→Alarm

Audio alarm: Enable this function. Need to connect a buzzer, turn on & adjust the volume, audio alarm can work well.

Motion detection: There are 4 windows selections under Motion Detection. Select different windows to display

different window positions. Drag the selected window to enlarge the window proportion. Manually type the sensitivity value or swipe the sensitivity bar to adjust the sensitivity.

Alarm: Email setting method is the same as Phone APP. Set the FTP server setting and Image capture in this interface.

Schedule: Select the time and click on the “Apply”.

7. Video Management Software (HIP2P Client)

Using Video Management software to view multiple cameras at the same time

7.1 Software installation

Scarica dal sito Web (<http://www.gentlen168.com/security-camera/info/898.html>) o Mini CD nel pacchetto. Installalo sul tuo computer.

Nota: questo programma riconosce l'UID della videocamera e non l'IP della videocamera. L'IP della telecamera è adatto per l'accesso al browser web

7.2 Add Camera

A) Open the software, click , to login system, **default password: leave it blank.**

- B) Click **Add Area** to Set an Area name (Like: office / home / factory.....), you also can modify and delete Area as picture showing below.

- C) Click “Search” to find IP Camera in the LAN, Select the camera click “add” to Add camera.

- D) Double Click camera's UID to modify camera's password. (Applicable after the camera is added to wifi, or after the camera has been connected to the network by cat5/6. You can access your camera anywhere by internet.).

- E) Click  Back to preview screen, Double-click the camera name in the device list to preview the screen in real time. (Or right click on the connection pointed by the mouse)

Frequently Asked Questions

Q1: Remote viewing, appear pause and delay phenomenon?

- A:1) Related to network data, it is recommended to adjust the HD mode to Smooth mode when watching, and the video file is still saved in HD mode.
- 2) Try to reduce the camera stream when view the video, reducing the stream may affect the quality of the image.
- 3) Remote viewing, the network recommends uploading network data up to 512KB/S. Download data 256KB/S to watch the best. Upload network data can be viewed in the router background.

Q2: Prompt password error

- A: The camera security password is incorrectly entered or forgot the password. Press and hold the reset button for 5-8 seconds and then reset the camera.

Q3: No audio sound

- A:1) Open the camera screen, click on the speaker and set to be monitored.
- 2) Open the volume setting, click on setting, click on audio settings, then adjustable volume.
- 3) The camera pickup range is 5-15 meters, depending on the volume of the recognized volume.

Q4: Camera IP address often changes

- A:**1) Login to web version and go to the camera setting, change the automatic IP address to manual setting.
2) The IP address which automatically obtain will vary depending on the IP assigned by your router's DHCP.

Q5: Is the device not online?

- A:**1) The router disables MAC address filtering.
2) If it is a dual-band router, it needs to use 2.4GWi-Fi and not support 5GWi-Fi.
3) The preferred server address (DNS) of the router is changed to the telecommunications service provider DNS.
4) Wi-Fi account password only contains numbers and letters, no horizontal characters and other special characters.
5) The router signal channel is changed to 11.

Q6: SD card remote playback download

- A:**1) Web download: Open the browser and log in, click the SD card and select recording date and time to download.
2) Mobile APP download: Open APP - click the video - click the remote playback - press the video file for 1-3 seconds to pop up a dialog box , click download, you can find the video file in the phone system file (CamHi file).

Q7: Can't identify the memory card?

- A:**1) Reinsert the SD card into the camera, powered off and restarted camera !
2) SD card is recommend to use SanDisk, Kingston, Samsung, Toshiba, PNY Bianwei, Lexar brand

Q8: Can't the phone search for the camera's own Wi-Fi?

- A:** Press the camera reset button for 5-8 seconds, make the camera reset factory default.

Q9: Can't the camera connect to Wi-Fi?

- A:**1) When the camera is configured, the phone and camera are no more than 3 meters away from the router!
2) Router Wi-Fi can't be hidden or MAC address bound, or limited!
3) Wi-Fi account password only contains numbers and letters, no special characters, such as horizontal lines.

Q10: RTSP Path Example

- A:** rtsp : //192.168.1.100 : 554/11

Q11: WBE browsing plug-in installation problem

- A:** Web page online download plug-in component: ActiveX, Or install the plug-in program in the CD!

Q12: Third party software: iSpy Software operation

- A:** iSpy Add camera selection: Open the software click add object, Select the IP photographer, Click ONVIF to enter the user name and password. URL enter: http:// camera IP address / port 8080. Click on the next page to see the full URL, click add, finish!

Q13: Can't connect to Optical Modem Wi-Fi router?

- A:** Recommend to use Wireless router, Some Optical Modem with Wi-Fi router has some kind of restriction, Cause the device can't connect to the wireless signal or no network transmission on the connection.

Q14: Can't play back remotely at phone APP?

- A:**1) Check that the device if can preview in real time!
2) Click the pinion symbol to enter the setting ---- Click on the SD card, check if can read the SD card.
3) Can preview the real-time picture normally, Can read the information of memory card, but no playback of files in video playback, recommend to unplug and plug the SD card again.
4) Because the remote playback of the video file is relatively large, Network does not support remote playback of network traffic! Recommend to connect your phone to a faster Wi-Fi, try remote playback.

Q15: Can't search for the camera IP address in the local area network.

A: Our device default IP address network segment 192.168.1.X, you need to modify your network IP address network segment to the same network segment, then use the search tool on the CD to search for IP addresses.

Q16: How to make the camera automatically cruise after setting the preset point?

A: Preset point 1-16 call command 41, 17-32 Calling Command 42, 65-80 Calling Command 43, 113-128 Calling Command 44, 128-144 Calling Commands 45, 146-160 call command 46, 161-176 Calling Command 47, 177-192 call command 48.

Q17: Mailbox alarm cannot receive pictures

A:1) Motion detection mailbox alarms support most mailboxes such as Google, Yahoo, etc. If you do not receive an email alert, please check if the mailbox settings are set according to the instructions, whether to pass the test.
2) Some alarm messages may be judged as spam by the mailbox, can be found in the mailbox trash or send mail delay due to network server data congestion, etc.

Q18: Can I add a camera to multiple phones?

A: Yes. Manually add the camera UID number to other mobile APP after the camera is connected to the network.

Q19: I can view the image on the same LAN, but the phone can't be viewed remotely outside.

A:1) The camera may be connected to your local area network without connecting to your router's external network, no network access! It is recommended to check if the router has set this camera IP to prohibit network access.
2) Restore factory settings, reset the router Wi-Fi and reconnect..

Q20: The phone can't access the Internet after the phone is connected to the camera wireless hot-spot.

A: The camera wireless hot-spot is convenient for the device to preview and view the image by mobile APP in a network-free environment and the phone can't access the external network by the wireless hot-spot.

FCC WARNING

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

NOTE: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation.

If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

To maintain compliance with FCC's RF Exposure guidelines, This equipment should be installed and operated with minimum distance between 20cm the radiator your body: Use only the supplied antenna.
